TECHNICAL DRAWINGS ARE APPROXIMATE ACTUAL SIZE

FLUSH TYPE

EXCEEDS 72 HR SALT SPRAY.

SAE J534

Flush type fittings are for applications where a protruding greasing nipple may be impractical. The compact design of the flush type fitting allows for use on shafts, pulleys and other rotating assemblies. Large diameter flush type fittings are ideally suited for high volume applications. Larger flush type fittings are used in many of the same applications as button head fittings, and are more resistant to damage due to their low profile design.
