THREAD FORMING

EXCEEDS 72 HR SALT SPRAY. 8,000 PSI MAX PRESSURE.

SAE J534

Thread forming fittings, also known as spin-drive, are ideal for high volume, assembly line applications. Thread forming threads are made out of case hardened steel. These fittings are designed to be installed by being driven or threaded into an untapped hole, thus eliminating the costly process of tapping. For more information on this increasingly popular thread series, see pages 30-31.
