Patent pending

New & Improved!

RINGCRUSHER™ Decrimping Tool

New Heavy-Duty Design!

Round anvil prevents damage to inside fittings.

- Removes crimp ring and PEX tubing from fittings in seconds!
- New cushion-grip handle.
- New heavy-duty tool head with rounded anvil cuts fast. Prevents damage to inside fittings.
- No more hacksaw, torch or frustration.
- Will not damage PEX fittings when used properly.
- Lets you recycle brass & poly alloy/plastic fittings.

RINGCRUSHER cuts crimp rings off fittings and expands crimped tubing for easy removal. It only takes a few seconds. New heavy-duty design cuts crimp rings on 1/2", 3/4" and 1" copper, brass and poly alloy/plastic fittings and tube without damage to inside fittings. Stop wasting time using a hacksaw or torch, and stop throwing away expensive PEX fittings.

1. Cut off PEX tube close to the fitting. Insert small jaw inside fitting and fully close handles, forcing cutter through crimp ring.
2. Reposition cutter to uncut side of ring and partially close handles, forcing crimp ring open. Repeat in another position to free ring for removal.
3. Reinsert Ringcrusher into fitting; fully close the handles, forcing the cutting jaw into PEX pipe. Repeat in several positions to free PEX pipe for removal.

Periodically adjust RINGCRUSHER

A properly adjusted tool will allow the edge of a 3/4" fitting to closely pass between the jaws of the tool when handles are fully closed. To adjust, loosen lock nut, turn stop screw and retighten lock nut.

Mill-Rose is not responsible for misuse of the tool, the RINGCRUSHER, or use of damaged fittings in work. Avoid using damaged fittings. Follow instructions when using this tool; periodically check and adjust the stop.

Cat.	Description	Std. Pk.	Weight
73015	POP display packaged	5	3.79 lbs.
73020	POP Display (10)	1	6.75 lbs.
