## Universal Forged Steel (UFS) Beam Clamp with UFS (Upper) Nut Right-Hand Thread

## Material: Forged steel

Finish: $\square$ Plain or $\square$ Zinc Plated
Service: For suspension of heavy loads from beams with flange widths to $15^{\prime \prime}$ and flange thickness to 1.031 .
Approvals: Complies with Federal Specification A-A-1192A (Type 28 without links; Type 29 with links), WW-H-171-E (Type 30 \& 31), ANSI/MSS SP-69 and MSS SP-58 (Type 28 without links; Type 29 with links).
Installation: Fit jaws over edges of lower beam flange and tighten nuts on tie rod to lock
clamp in place.

## Features:

- Upper nut is tapped to any specified size up to the maximum rod size.
- Quickly, easily, economically installed.
- Tie rod insures a tight non-slip fit to the beam.
- Clamps are available, tapped to any specified rod size up to the maximum rod size.

Ordering: Specify clamp size, figure number, name, rod size and finish.
Note: The application of a load to a structural beam by means of a beam clamp produces a transverse stress, perpendicular to the axis of the beam, in the flange to which the load is applied. Size per load, beam flange width and rod size

| $5 \bullet$ |  |  | 31.0 |  |  |  |

A For reference only, order by clamp size.

- Furnished with links.
- Note: Load capacity based on rod sizes shown. For load capacity of other rod sizes, see technical data section of the pipe hanger catalog.
$\leftrightarrows$ For actual "Z" dimensions, see technical data section of the pipe hanger catalog.
