

Food Service

**CHICAGO
FAUCETS** 
a Geberit company

Products for Your Most Demanding Applications

Restaurants need **dependable, durable faucets**. From the **front of the house to the back of the house**, each area has **unique requirements**. As the **leading commercial faucet brand**, we understand those requirements. Our unsurpassed quality and dependability **frees you up to focus on your business**.

Product Quality — For over 110 years, we've set the mark for quality, backed up by **the industry's strongest warranties**.

Flexibility & Expandability — Allows you to **upgrade and change components** easily and affordably.

Comprehensive Offering — We offer thousands of faucets. See them all or **design your own faucet** on our website.

Made in the USA — **Over 95%** of our products meet the requirements of the **Buy American Act**.

Conservation & Sustainability — Choose from a wide selection of faucets designed to **reduce water consumption**.

Product Availability — Our most popular products are available from your local distributor or for quick shipment, in many cases within **24 hours**.

See page 32 for shipping details.

Dish Room

We offer a wide selection of water-conserving, high-performance pre-rinse faucets that reduce utility bills and improve productivity.

Food Prep Areas

Choose from a wide array of durable and sink faucets to match any kitchen.

Janitorial & Maintenance

Our durable service sink faucets feature integral vacuum breakers, pail hooks, hose threaded outlets, and wall brackets.

Bar & Server Stations

Chicago Faucets offers an array of fillers and sink faucets to help support your bar and server stations.

and reliable workboard
en layout and budget.

Hand Wash & Safety Products

Chicago Faucets offers innovative products designed to improve hygiene and add safeguards in food preparation areas.

affordable, dependable glass
port your wait staff.

Restrooms

From advanced electronics to time-tested metering faucets, we offer stylish solutions for modern and traditional lavatory designs.

Leading The Way To New Standards

ECAST®

Multiple states have implemented **laws regarding lead content** in plumbing products. On January 4, 2014, new provisions for Section 1417 of the Safe Drinking Water Act went into effect. The intention of these provisions is to update the definition of the term “lead free” and include exemptions to the prohibitions listed in the law. Once again, Chicago Faucets is leading the way.

ECAST® is our line of brass products with **one quarter of one percent (0.25%)** or less total lead content by weighted average. We **control the entire manufacturing process**, including casting, ensuring that every ECAST fitting we produce meets low-lead requirements. All Chicago Faucets products are **certified by an ANSI-approved**, third-party testing facility.

Water Conservation

Chicago Faucets is committed to saving water. California’s Green Building Standards Code (CALGreen) sets a new standard for water conservation, requiring an overall reduction of potable water consumption by at least 20%. Once again, Chicago Faucets is leading the way on this initiative:

- Choose from over 200 standard products
- Low flow rates from .35 to 1.5 GPM
- All CALGreen compliant products are from our ECAST® line

ECAST®

New and Better Options for Food Service

At Chicago Faucets, we are committed to developing new products and improving our existing lines to help support your restaurant business. Here are some recent additions to the Chicago Faucets product family.

Workboard Faucets

64 new faucets designed for durability with a new level of affordability.

Glass Fillers

A whole new level of durability, reliability, and convenience for your restaurant.

Low Flow Pre-Rinse Sprays

Ultra-high performance, durability, and lower energy and water costs.

Metering Lavatory Faucets

Adjustable cycle times to save water and user temperature control for convenience.

640 Series

Easy serviceability of cartridges with the integration of accessible stop assemblies.

HyTronic® Electronic Faucets

Improve hygiene with a stylish, high-tech solution for restrooms and hand sinks.

Deck Mount Workboard Faucets

An affordable, durable, and dependable solution for the heart of your kitchen.

32 deck mount options with a choice of full-flow or water conserving 1.5 GPM flow outlets – plus a wide choice of spout and handle options to meet your exact needs.

Pedal Valve Faucets

These faucets allow you to keep your hands free for food preparation with convenient foot pedal operation. The self-closing design of these products also helps conserve water.

- Solid cast brass construction for maximum strength and stability
- Available with a choice of single or dual supply configurations for added flexibility
- Low-flow outlets combined with pedal operation increase water conservation

The finest quality food service products delivered faster than ever before.

Chicago Faucets is committed to providing the highest quality food service products and the customer support to help keep your business running. Standard shipping for most products is 5 days.

CFNow!™ Shipping

We have a number of products designated **CFNow!** and available for shipment within **24 hours** of your order. If you need a product quickly, be sure to visit our website to see our complete list of **CFNow!** products.

All products in this catalog available for **CFNow!** shipment are identified with bold type in the product charts.

Chicago Faucets and Sustainability

Chicago Faucets has been an industry leader in environmental responsibility. From our manual metering faucets to our incredibly dependable HyTronic electronic faucets, we have helped reduce water usage in countless buildings across the globe. We were the first company to offer a complete line of products designed to meet the California lead-free standard, and many of our products also meet the CALGreen water conservation requirements.

Chicago Faucets has earned ISO 14001 certification. We identify any potentially hazardous processes, institute strict controls, continuously monitor outputs to verify compliance, and thereby prevent critical incidents. In order to earn this designation, Chicago Faucets must maintain a Continual Improvement Process focused on:

- **Expansion:** We continually expand our environmental management systems to other business areas.
- **Enrichment:** We extend our environmental management system to more activities, products, processes, emissions, and resources.
- **Upgrading:** We remain knowledgeable of the latest environmental issues and look for ways to improve our systems.

On the following pages, we share some of the measurements we look at annually in an effort to continually reduce our impact on the environment.

Improving Energy Efficiency at Chicago Faucets

Every year, Chicago Faucets conducts energy audits at each of our facilities to measure our improvements and uncover additional areas for energy reduction. Our audits have helped identify the energy usage of operating equipment, air compressor systems, and HVAC systems, and revealed the various ways that our demand for operating energy could be reduced by using these systems more efficiently.

Our efforts to reduce energy consumption are aligned with our commitment to use resources more efficiently and protect the environment. Over the past five years, Chicago Faucets has reduced overall energy consumption by 24% in our three manufacturing facilities.

Electricity Usage

We're Serious About Saving Water

Chicago Faucets has taken several significant steps to advance a more comprehensive and collaborative approach to water management. In addition to reducing water usage, we have implemented robust programs for the treatment of post-production waste water.

Our commitment to water conservation has resulted in dramatic improvements at all our facilities. Over the past five years, Chicago Faucets has reduced annual fresh water consumption by 25% in our three manufacturing facilities.

Water Usage

CASE STUDY

Our Duffin facility in Elyria, Ohio, machines most of our components. To help reduce energy consumption, we invested in new variable speed air compressor technology for the facility. When demand for the compressor is reduced, it automatically kicks down to a lower speed to reduce energy use. Duffin expects to see a 10% reduction in energy usage over the first twelve months of use.

Reducing Landfill Waste Through Recycling at Our Facilities

Over the past five years, Chicago Faucets has continually reduced the amount of waste going to landfill, while increasing the amount of recycled waste. In our Milwaukee facility alone, we have reduced the amount of landfill waste by 60%. An amazing 98% of our scrap brass is recycled, and since we utilize a clean, virgin alloy manufacturing process, the scrap can be recycled and returned as ingot for casting.

Our commitment to waste reduction and recycling has resulted in dramatic improvements at all our facilities. Over the past five years, Chicago Faucets has reduced landfill impact by increasing recycling by 16 times – over 350 tons per year.

Waste Recycling

Centralized Logistics Mean Lower Environmental Impact

Centralized logistics helps Chicago Faucets increase efficiency and reduce environmental impact. Our Michigan City, Indiana location is utilized to ship orders throughout North America. The site is situated in the heart of the United States, a short distance from our Ohio and Wisconsin production sites.

Additionally, all of our facilities look to local suppliers to provide the materials necessary to deliver a finished product. Our focus on centralized logistics has resulted in nearly 90% of material purchases from vendors within a 200 mile radius of each facility.

Centralized Location, Local Suppliers

CASE STUDY

In addition to reducing water usage, Starline, our Milwaukee, Wisconsin foundry, utilizes a state-of-the-art waste water treatment system that has been recognized by the City of Milwaukee for its environmental effectiveness. This system filters metals from the waste water to a level that is 100 times less than the legal requirement – less than 2 parts per million – and is tested by the EPA five times a year.

We are a member of the U.S. Green Building Council and support the Leadership in Energy and Environmental Design (LEED) Green Building Rating System™, to measure the efficiency and sustainability of buildings in the U.S. and Canada. If you are trying to achieve LEED Certification for your building, our low-flow outlets, metering cartridges, and sensor-operated faucets can contribute points in these areas: Water Efficiency Credit 2: Innovative Wastewater Technologies and Water Efficiency Credit 3: Water Use Reduction

We are proud to be a partner with WaterSense®, sponsored by the EPA and designed to protect the future of our nation's water supply by promoting efficiency and enhancing the market for water efficient products, programs, and practices.

We are a charter sponsor of the Alliance for Water Efficiency, a non-profit organization that is dedicated to the efficient and sustainable use of water. It brings together a diverse range of stakeholders to advocate water efficiency and conservation.
