

# Shaft Collars

**Quality Products. Right Price. Right Now.**

Three types of shaft collars are shown in circular frames on the left side of the page. The top frame shows a one-piece split collar in black oxide finish. The middle frame shows a two-piece split collar in black oxide finish. The bottom frame shows two solid set screw collars, one in zinc finish and one in 304 series stainless steel.

**IDC Select® offers a broad assortment of shaft collars to suit your application needs**

- Stock shaft collars include:
  - One piece split in black oxide finish
  - Two piece split in black oxide finish
  - Solid set screw design in zinc finish
  - Solid set screw design in 304 series stainless steel
- One piece split design completely adheres to the shaft without damage offering greater axial holding power than set screw collars.
- Two piece split design offers easy installation.
- Perfect for soft metals, set screw designs are the most cost effective option.

**Ask your local AD Distributor about their broad inventory of high quality, competitively priced IDC Select® products.**
