

# Watertight Wiring Devices

A complete collection of watertight devices for demanding industrial environments

wetguard<sup>®</sup>

# wetguard®

Leviton's Wetguard products are the most versatile and well-engineered watertight wiring devices on the market.

The Wetguard line consists of a comprehensive array of plugs, connectors, inlets, outlets, covers and rugged FD boxes that allow mounting of single-gang devices in multi-gang configurations.

## Watertight Electrical Connections

Wetguard devices are designed for industrial applications where electrical connections are exposed to wet locations such as outdoor weather or indoor washdown. They have IEC and NEMA watertight and dust-tight enclosure ratings and offer many significant advantages over competitive brands. A patented multi-point sealing system forms an impenetrable barrier against dirt and moisture providing the ultimate protection that you should expect from a watertight device.

## Corrosion-Resistant

Wetguard devices feature corrosion-resistant electroless nickel-coated brass blades, contacts, terminal screws and wiring clamps, and stainless steel assembly screws, making them ideal for use in wet and corrosive environments.

## Withstands Abuse in Harsh Environments

Wetguard devices are resistant to water, acids, alkalis, and many automotive and industrial lubricants and solvents. The plug and connector husk is molded to a bondable nylon body, providing a device that withstands physical abuse as well. In addition, the patented compression nut strain relief system ensures the integrity of the electrical connection and watertight seal.

### Agriculture

Agricultural operations typically expose electrical equipment and connections to wet conditions from weather, irrigation and washdown activities. Wetguard watertight devices provide secure electrical connectivity for equipment that also keeps the operators and livestock safe.

### Construction

Equipment on construction sites is constantly exposed to rain, snow, and mud, as well as physically harsh conditions. Wetguard watertight devices provide safe and secure electrical connections that withstand the rigors of this environment.

### Food & Beverage Processing

The washdown activity typically found in food and beverage processing facilities presents a challenge for keeping equipment running and operators safe. Wetguard watertight devices provide unsurpassed protection, maximizing uptime of equipment and safety to workers. Plugs and connectors are now IP69K.

### Water Treatment

Water and sewage treatment plants, as well as other chemical processing facilities, typically subject electrical equipment and connections to both wet and corrosive environments. Wetguard watertight devices are constructed of materials that resist corrosion and damaging effects of chemical exposure.

**LEVITON®**

## Plug & Connector Features:

**IP69K\***  
**RATED** High-pressure,  
High-temperature  
Washdown

Replacement interiors  
also available

Husk is molded to bondable nylon body to maximize sealing capability

High-performance elastomer parts resist water and most acids, alkalis, grease, oil, and solvents. Offers UV stability and resists fungal growth

Cat. No.  
27W47

Clear back cover on wiring module for easy inspection of wired terminals

Heavy-duty, one-piece contacts for maximum conductivity electrical performance

Electroless nickel-coated brass blades, contacts, terminal screws and wiring clamps resist corrosion

Triple drive screws (Phillips, Slotted and Robertson) facilitate proper tightening

Innovative strain relief system and compression nut provide a watertight seal and prevent cord slippage for multiple cord diameters

NEMA configuration number and/or rating molded onto device face

Exclusive "tongue and groove" design provides superior ingress protection from water, dirt and debris

Cat. No.  
26W47

Deep-fluted finger grips for a firm grip when tightening nut

Extra large, deep wiring wells for quick, easy insertion of stranded conductors

Non-magnetic stainless steel body assembly screws

**LIFETIME  
WARRANTY**

Wetguard connectors are covered by Patents: U.S. 5,863,221 and 6,017,243;  
CAN 2,266,253 and 2,243,838; MEX 215,544 and 225,136

\*Plugs & Connectors need caps attached in order to achieve IP69K rating

## Flanged Inlet/Outlet Features:

Impact and chemical resistant Valox® PBT cover and lid provide extended life in abusive environments

Spring-loaded flip lid cover ensures a watertight seal when the cover is closed

Cat. No. 90W47-S

Dual-hasps provide additional lockout/tagout option for added security

Electroless nickel-coated brass blades, contacts, wiring screws and wiring clamps resist corrosion

Stainless steel mounting and assembly screws provide corrosion resistance; triple-drive head facilitates proper tightening

Wetguard inlets and outlets are covered by Patents: U.S. 5,863,221; CAN 2,243,838; MEX 225,136

## Single-Gang Switch Cover Features:

Impact and chemical resistant Valox® PBT cover and handle provide extended life in abusive environments

Integrated lockout handle meets OSHA safety regulations

Cat. No. COVER-S

Stainless steel mounting and assembly screws provide excellent corrosion resistance; triple-drive head facilitates proper tightening

## Non-Metallic FD Box Features:

Rigid PVC construction provides excellent resistance to impact, water and chemicals found in harsh industrial environments

Cat. No. FDBX1-GY

Stainless steel device mounting plate with attached ground wire facilitates mounting of single receptacles and toggle switches

Stainless steel assembly screws provide excellent corrosion resistance

Corrosion-resistant brass threaded inserts for mounting covers

Boxes feature 1" diameter unthreaded conduit openings, and include reducers for 3/4" and 1/2" PVC conduit. Also included are plugs for unused openings.

# wetguard<sup>®</sup>

## Non-Metallic FD Boxes

Our non-metallic FD Boxes are constructed of a rigid PVC, making them extremely durable and resistant to impact, chemicals, solvents and other harsh industrial conditions. They are available in yellow and gray one-, two- and three-gang unthreaded configurations that will readily accept PVC conduit.

1. Non-metallic boxes feature 1" diameter unthreaded conduit openings, and include reducers for ¾" and ½" PVC conduit. They also include plugs for unused openings.  
An external flange with mounting holes makes them excellent for wall mounting.  
Our boxes comply with UL and CSA standards and have enclosure ratings of NEMA Type 4, 4X, 12 and IEC IP66 watertight and dust-tight when used in conjunction with Leviton's Wetguard devices.
2. TPV gasket assures maximum watertight and dust-tight seal between frame and box.
3. Our patent-pending "modular" frame design allows the combining of a variety of single-gang devices in multi-gang configurations without the need for dedicated two-, and three-gang cover plates! This gives you the ability to create custom power distribution boxes specific to your needs.
4. Stainless steel device mounting plates facilitate mounting of single receptacles and toggle switches with an 8-inch long, 12 AWG ground wire lead.
5. TPV gasket on all Wetguard covers assures maximum watertight and dust-tight seal between device cover and frame.
6. Single-gang Wetguard devices and covers fit in any frame position and provide excellent protection from water and dust ingress. Plus, our boxes feature up to 30% more volume than competitive boxes, making it easier to install devices.

## Stainless Steel FD Boxes

Our stainless steel boxes are constructed of a rugged 14 gauge type 304 stainless steel for resistance against heat, chemical corrosion and physical abrasion. The ultra-smooth finish strengthens the steel, making it easy to clean and sanitize. These boxes are available in one- and two-gang configurations and are intended for use with metallic rigid or flexible conduit.

**LEVITON®**

Available in single-gang and two-gang configurations

Welded 304 stainless steel construction provides resistance against heat, chemical corrosion and physical abrasion

Suitable for use in wet and damp locations

Terminal Screws	Electroless Nickel-coated Brass
Mounting & Assembly Screws	Stainless steel, non-magnetic

Mechanical Specifications		
Terminal Accommodation	15 Amp	#18 AWG to #10 AWG
	20 Amp	#16 AWG to #10 AWG
	30 Amp	#12 AWG to #8 AWG
Product ID		Ratings and NEMA ID permanently marked on device
Standards & Certifications		
NEMA		WD-6
ANSI		C-73
UL		498
CSA		C22.2 No. 42
NOM		#057

## Technical Reference

### Enclosure Classifications

Enclosures serve the dual purpose of protecting personnel from incidental contact with the enclosed electrical equipment and protecting the enclosed equipment against specified environmental conditions. Enclosures are rated for use in specific environmental conditions by NEMA, UL, CSA and the IEC. The rating systems most often cited are the NEMA Enclosure Type Numbers as defined in NEMA Standards Publication 250 (and corresponding UL/CSA designations) and the IEC Enclosure Classification Designation as defined in the International Standard IEC 60529 - Degrees of protection provided by enclosures (IP Code).

### IEC Enclosure Classifications

The International Electrotechnical Commission (IEC) is an international standards organization that prepares and publishes International Standards for all electrical, electronic and related technologies. IEC 60529 classifies the degrees of protection provided against the intrusion of solid objects (including body parts like hands and fingers), dust, accidental contact, and water in electrical enclosures.

IEC 60529 - IP Suitability Ratings					
First Number - Degree of Access to Hazardous Parts			Second Number - Degree of Protection From Water Ingress		
Level	Ingress Limit	Effective Against	Level	Ingress Limit	Effective Against
0	—	No protection against contact and ingress of objects	0	—	No protection against water ingress
1	≥ 50 mm diameter	Any large surface of the body, such as the back of a hand, but no protection against deliberate contact with a body part	1	Dripping water	Dripping water (vertically falling drops) shall have no harmful effect
2	≥ 12.5 mm diameter	Fingers or similar objects	2	Dripping water when tilted up to 15°	Vertically dripping water shall have no harmful effect when the enclosure is tilted at an angle up to 15° from its normal position
3	≥ 2.5 mm diameter	Tools, thick wires, etc.	3	Spraying water	Water falling as a spray at any angle up to 60° from the vertical shall have no harmful effect
4	≥ 1 mm diameter	Most wires, screws, etc.	4	Splashing water	Water splashing against the enclosure from any direction shall have no harmful effect
5	Dust protected	Ingress of dust is not entirely prevented, but it must not enter in sufficient quantity to interfere with the satisfactory operation of the equipment	5	Water jetting	Water projected by a nozzle (6.3 mm) against enclosure from any direction shall have no harmful effects
6	Dust-tight	No ingress of dust	6	Powerful water jetting	Water projected in powerful jets (12.5 mm nozzle) against the enclosure from any direction shall have no harmful effects
			7	Temporary immersion (up to 1 m)	Ingress of water in harmful quantity shall not be possible when the enclosure is immersed in water under defined conditions of pressure and time
			8	Continuous immersion	The equipment is suitable for continuous immersion in water under conditions which shall be specified by the manufacturer
			9	High pressure and temperature water jets	Water projected at high pressure and high temperature against the enclosure from any direction shall not have harmful effects

## NEMA, UL, and CSA Enclosure Classifications

NEMA, UL, and CSA are standard writing organizations commonly recognized in North America. Their ratings are based on similar application descriptions and expected performance. UL and CSA both require enclosure testing by qualified evaluators. NEMA does not require independent testing and leaves compliance completely up to the manufacturer. Below is a partial listing of the NEMA/UL/CSA.

Rating	NEMA Standard 250	UL 50	CSA Standard C22.2 No 94
Type 1	Indoor use to provide a degree of protection against contact with the enclosed equipment; in locations where unusual service conditions do not exist.	Indoor use to provide a degree of protection against contact with the enclosed equipment and against a limited amount of falling dirt.	General purpose enclosure. Protects against accidental contact with live parts.
Type 2	Indoor use to provide a degree of protection against contact with the enclosed equipment and against limited amounts of falling water and dirt.	Indoor use to provide a degree of protection against limited amounts of falling water and dirt.	Drip proof enclosure same as Type 1; indoor use to provide a degree of protection against dripping and light splashing of non-corrosive liquids and falling dirt.
Type 3	Indoor or outdoor use to provide a degree of protection against windblown dust, rain and sleet; undamaged by the formation of ice on the enclosure (not sleet proof).	Indoor or outdoor use to provide a degree of protection against windblown dust, rain and sleet; undamaged by the formation of ice on the enclosure.	Indoor or outdoor use; provides a degree of protection against rain, snow, and windblown dust; undamaged by the external formation of ice on the enclosure.
Type 3R	Indoor or outdoor use to provide a degree of protection against falling rain and sleet; undamaged by the formation of ice on the enclosure.	Indoor or outdoor use to provide a degree of protection against falling rain and sleet; undamaged by the formation of ice on the enclosure.	Weather proof enclosure; indoor or outdoor use to provide a degree of protection against rain or snow; undamaged by the external formation of ice on the enclosure.
Type 3S	Indoor or outdoor use to provide a degree of protection against falling dirt, rain, sleet, snow, and windblown dust; and in which the external mechanism(s) remain operable when ice laden.	Indoor or outdoor use primarily to provide a degree of protection against rain, sleet, windblown dust and to provide for operation of external mechanisms when ice laden.	Weather proof enclosure; indoor or outdoor use to provide a degree of protection against rain or snow; undamaged by the external formation of ice on the enclosure surface.
Type 4	Indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, and hose directed water; undamaged by the formation of ice on the enclosure.	Indoor or outdoor use to provide a degree of protection against falling rain, splashing water, and hose-directed water; undamaged by the formation of ice on the enclosure.	Indoor or outdoor use; provides a degree of protection against rain, snow, windblown dust, splashing and hose-directed water; undamaged by the external formation of ice on the enclosure.
Type 4X	Indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, and hose-directed water; undamaged by the formation of ice on the enclosure.	Indoor or outdoor use to provide a degree of protection against falling rain, splashing water, and hose-directed water; undamaged by the formation of ice on the enclosure; resists corrosion.	Indoor or outdoor use; provides a degree of protection against rain, snow, windblown dust, splashing and hose-directed water; undamaged by the external formation of ice on the enclosure; resists corrosion.
Type 6	Indoor or outdoor use where occasional submersion is encountered, limited depth; undamaged by the formation of ice on the enclosure.	Indoor or outdoor use to provide a degree of protection against entry of water during temporary submersion at a limited depth; undamaged by the external formation of ice on the enclosure.	Indoor or outdoor use; provides a degree of protection against the entry of water during temporary submersion at a limited depth. Undamaged by the external formation of ice on the enclosure; resists corrosion.
Type 6P	Indoor or outdoor use to provide a degree of protection against the entry of water during prolonged submersion at a limited depth.	Indoor or outdoor use to provide a degree of protection against the entry of water during prolonged submersion at a limited depth.	No CSA equivalent.
Type 12	Indoor use to provide a degree of protection against dust, falling dirt and dripping non-corrosive liquids - No knockouts.	Indoor use to provide a degree of protection against dust, falling dirt and dripping non-corrosive liquids - No knockouts.	Indoor use to provide a degree of protection against circulating dust, lint, fibers, dripping and light splashes of non-corrosive liquids.
Type 12K	Enclosures with knockouts are intended for indoor use primarily to provide a degree of protection against dust, falling dirt, and dripping non-corrosive liquids.	Indoor use to provide a degree of protection against dust, dirt, dripping water, and external condensation of non-corrosive liquids. Knockouts located in the top or bottom walls, or both.	Indoor use to provide a degree of protection against circulating dust and lint; dripping and light splashing of non-corrosive liquids; provided with knockouts.
Type 13	Indoor use to provide a degree of protection against lint, dust, seepage, external condensation and spraying of water, oil and non-corrosive coolant.	Indoor use to provide a degree of protection against dust and spraying of water, oil and non-corrosive coolants.	Indoor use to provide a degree of protection against circulating dust, lint, fibers, seepage and spraying of non-corrosive liquids including oils and coolants.

## Technical Reference (continued)

### Comparing North American and International Enclosure Classifications

NEMA Standard 250 is a product standard that addresses construction and performance elements of the enclosure itself, along with its ability to protect persons from contacting hazardous components inside and against solid object and water ingress. IEC 60529 is NOT a product standard, and only covers the enclosures ability to protect persons from contacting hazardous components inside the enclosure, as well as from solid object and water ingress. As a result, there is not a direct correlation between the two classifications. Additionally, if the requirement for an enclosure Type is specified, an enclosure with just an IP rating cannot be substituted. However, while NEMA Type ratings meet and exceed the test requirements of associated IEC classifications, the table below shows the comparative relationship between the two ratings (as outlined in the NEMA whitepaper: A Brief Comparison of NEMA 250 and IEC 60529).

NEMA Enclosure Type Number	IEC Enclosure "IP" Designation
1	20
2	22
3	55
3R	24
3S	55
4 and 4X	66
5	53
6	67
6P	68
12 and 12K	54
13	54

Note: This table cannot be used to convert from IEC classifications to NEMA types

### Testing Standards

In applications such as processing plants and industrial marinas, electrical devices are frequently exposed to high pressure water streams, temporary immersion in water and corrosive environments (such as salt air). It is imperative that the electrical connectors are able to withstand the rigors of such environments.

Leviton Wetguard devices are tested to and exceed IEC and UL watertight and weatherproof standards. These independent tests have defined parameters as noted in the text that follows:

#### IEC IP Water Penetration Test:

Water is sprayed from a 12.5 millimeter (.5 inches) diameter nozzle from a distance of 3 meters (10 feet) at a rate of 100 liters (26 gallons) per minute on a joined plug and connector. The water spray is directed at the connector/plug joint and cable entries. Additionally, parts are submerged in water 1 meter (3 feet) deep for 30 minutes.

**Result: Wetguard Plugs and Connectors are rated to IP67 when connected.**

#### UL NEMA Water Penetration Test:

Water is sprayed from a 25 millimeter (1 inch) diameter nozzle from a distance of 3.5 meters (12 feet) at a rate of 240 liters (65 gallons) per minute on a joined plug and connector. The water spray is directed at the connector/plug joint and cable entries. Additionally, parts are submerged in water 1.8 meters (6 feet) deep for 24 hours and subjected to a salt spray (fog) for 200 hours.

**Result: Wetguard Plugs and Connectors are rated to NEMA 4, 4X, 6, and 6P when connected.**
