Before Torqueing

After Torqueing

Installation Simple, Fast & Reliable No Cutting or Stripping of Cable Required

1. Loosen the shear-head bolt until the ribs are visible & the cable is not obstructed on entry
2. Apply anti-oxidant grease from the connector to the end of the conductor & insert the conductor into the cable entry port making sure it is fully seated in the back of the connector
3. Tighten the bolt with a closed-end wrench or socket until the top shear-head nut breaks off
4. Check that conductors are secure

- ▶ Insulation Piercing - Insulation Displacement Splicing Technology
- ▶ Fully Submersible, Completely Waterproof connector for Copper or Aluminum wire
- ▶ Rubber Over-molded Body ensures the installer does not come into contact with bare metal conductor or the conductive material of the connector
- ▶ Double Shear-Head Bolt guarantees correct torque every time, ensuring a quality connection, & eliminating the possibility of hot spots, damaged wires or loose connections
- ▶ No cable stripping required, simply insert the jacketed cable into the entry port & tighten with a 1/2" 6 point socket
