

## NIBCO® Press System®

## **Business-to-Business Solutions**

Look to NIBCO for technology leadership.

The velocity with which e-business evolves demands that new products and services be continuously developed and introduced to keep our customers at the center of our business efforts. NIBCO provides an entire suite of business-to-business solutions that is changing the way we interact with customers.

NIBCOpartner.com<sup>sm</sup> is an exclusive set of secure web applications that allow quick access to customer-specific information and online order processing. This self-service approach gives you 24/7 access to your order status putting you in total control of your business.

Real time information includes:

- Online order entry
- Viewable invoices & reports
- Inventory availability
- Current price checks
- Order status
- Online library of price sheets, catalogs & submittals

Electronic Data Interchange (EDI) makes it possible to trade business documents at the speed of light. This technology cuts the cost of each transaction by eliminating the manual labor and paper-work involved in traditional order taking. This amounts to cost-savings, increased accuracy and better use of resources.

With EDI, you can trade:

- Purchase orders
- PO Acknowledgements
- Invoices

- Product activity data
- Advanced ship notices
- Remittance advice

Vendor Managed Inventory (VMI), a sophisticated service for automated inventory management, reduces your overhead by transferring inventory management, order entry and forecasting to NIBCO. This is an on-going, interactive partnership with NIBCO.

Through automation, VMI brings results:

- Improves customer service
- Optimum inventory efficiencies
- Better forecasting

- Cuts transaction costs
- Peace of mind
- Relief from day-to-day management

## NIBCO pressystem

#### **Quick and Easy**

The NIBCO<sup>®</sup> Press System<sup>®</sup> is user friendly, quick and easy to install. Installation can be completed in less time than traditional solder, threaded, brazed or grooved copper systems. Significant time savings means tight budgets and deadlines are met while project delays and cost overruns are avoided.

#### **Full System Product Offering**

The NIBCO<sup>®</sup> Press System<sup>®</sup> is more than just 1/2" to 4" fittings. Our offering also includes the industry's widest and most specified range of ball, gate, globe, angle, check and butterfly valves in addition to a full line of NIBCO tools necessary to complete a total system installation.

#### Flameless

The NIBCO<sup>®</sup> Press System<sup>®</sup> is easier and safer to use because there is no flame, solder or flux required. Connections can even be made on a wet tube!

#### Reliable

With the NIBCO<sup>®</sup> Press System<sup>®</sup>, a watertight joint is formed between the EPDM seal and the crimped fitting or valve providing a permanent connection. Reliability you can count on ... NIBCO<sup>®</sup> Press Fittings are backed by a 110-year-old company and a 50-year written guarantee.

#### **Approvals, Standards and Performance**

The NIBCO<sup>®</sup> Press System<sup>®</sup> has undergone extensive and rigorous internal and external testing and meets various worldwide, industry and governmental standards and codes. Compliant with the following except where otherwise noted: ASME 16.51 Performance • International Residential Code<sup>®</sup> (IRC) • International Plumbing Code<sup>®</sup> (IPC) • International Mechanical Code<sup>®</sup> (IMC) • Uniform Plumbing Code<sup>\*</sup> (UPC) • Uniform Mechanical Code<sup>\*</sup> (UMC) • State of Massachusetts (Plumbing) • City of LA (Plumbing and Hydronic/Chilled water).

\*Uniform Plumbing Code and Uniform Mechanical Code are copyrighted publications of the International Association of Plumbing and Mechanical Officials.

Third party certified to: IAPMO PS 117, Copper, Copper Alloy, Carbon Steel, and Stainless Steel Piping System with Press-Type and Nail-Type Connections ICC-ES LC1002, Press-Connection Fittings for Potable Water Tube and Radiant Heating Systems ½" thru 2" ASME B16.51, Copper and Copper Alloy Press-Connect Pressure Fittings NSF/ANSI 61, Drinking Water Systems Components—Health Effects NSF/ANSI 372, Drinking Water Systems Components—Lead Content.

All valves and fittings are manufactured under a Quality Management System conforming to the current version of ISO 9001 standards.

#### **Applications**

The NIBCO<sup>®</sup> Press System<sup>®</sup> can be used in new construction or repair work and is designed for potable water, HVAC and process water systems for commercial, industrial and residential applications.

#### **Professional Appearance**

The NIBCO<sup>®</sup> Press System<sup>®</sup> creates a clean joint without the mess of excess solder or discoloration.

#### **Joint Integrity**

The NIBCO<sup>®</sup> Press System<sup>®</sup> uses engineered tools, jaws and chains that are tested and approved to ensure a consistent, reliable crimp.

NIBCO® Press System® ball valves are designed to meet MSS SP-110 with the exception of the end connection. Ball valves are down-rated from 600 PSI CWP to 250 PSI CWP to match the Press System®. Male and female press-to-connect ends are new technology not yet covered in the current edition of this specification.

## **NIBCO<sup>®</sup> Press System<sup>®</sup> Lead-Free<sup>\*</sup> Bronze Ball Valves**

Silicon Performance Bronze<sup>®</sup> two-piece body • copper ends • full port • blowout-proof stem • MSS SP-145 • IAPMO IGC-157 • NSF/ANSI-61-8 commercial hot 180°F (includes annex F and G) and NSF/ANSI-372

#### Size range: 1/2" - 2" Pressure rating: 250 PSI non-shock cold working pressure Body design pressure: 600 PSI CWP Maximum pressure / temperature: 225 PSI at 250° F

Lead-free\* markings: Double oval in body casting, white handle and blue hang tag

Revised 1/23/2017

## **NIBCO® Press System® Lead-Free\* Brass Ball Valves**

**Features:** press ends leak detection • two-piece body • PTFE seats • full port • blowout-proof stem **Approvals:** IAPMO/ANSI Z1157 • NSF/ANSI-61 & 372 • MSS SP-145 • conform to ASME B16.51<sup>†</sup>

#### Size Range: 1/2" - 2" Pressure rating: 200 PSI non-shock cold working pressure Maximum pressure / temperature: 200 PSI at 200° F

Lead-Free\* markings: White handle and blue hang tag

**Applications:** drinking water • domestic hot & cold water • HVAC (condensors, chilled water, hot water heating) • isolation & throttling (half-open to full-open only) • connect to rigid copper tubing manufactured per ASTM B88, condition H (hard drawn)

Reference Press System catalog for updated Approved Tool and Jaw Compatibility Matrix list.

#### Not compatible with annealed (dead soft) copper tubing. Not intended for gas use.

IAPMO/ANSI Z1157: in addition to meeting ICG-157 test requirements, the IAPMO/ANSI Z1157 also requires Press ends to be fully tested to IAPMO PS-117 performance requirements which includes the following additional tests:

- 1. Unrestrained Hydrostatic Pressure Test at 20 °C (68°F)
- 2. Unrestrained Hydrostatic Pressure Test at 93 °C (200°F)
- 3. Static Torsion Test for Press Connections
- 4. Bending Test
- 5. Vacuum Test

Visit our website for the most current information.

- 6. Hydraulic Shock (Water Hammer) Test
- 7. Vibration Test
- 8. Thermal Cycling Test
- 9. Alternate Thermal Cycling Test
- 10. Dynamic Torsion Test for Press Connections

IAPMO/ANSI Z1157: in addition to meeting ICG-157 test requirements, the IAPMO/ANSI Z1157 also requires Press ends to be fully tested to IAPMO PS-117 performance requirements which includes the following additional tests:

- 1. Unrestrained Hydrostatic Pressure Test at 20 °C (68°F)
- 6. Hydraulic Shock (Water Hammer) Test 2. Unrestrained Hydrostatic Pressure Test at 93 °C (200°F)
- 3. Static Torsion Test for Press Connections
- 4. Bending Test

**Options:** 

Extended lever

**EPDM Seal for Press Ends** 

5. Vacuum Test

- 7. Vibration Test
- 8. Thermal Cycling Test
  - 9. Alternate Thermal Cycling Test
  - **10. Dynamic Torsion Test for Press Connections**

PC413-Y-LF Press Ends

PC413-Y-LF Press x Press

NIBCO check valves may be installed in both horizontal and vertical lines with upward flow or in any intermediate position.

They will operate satisfactorily in a declining plane (no more than 15°). Install check valves as far from pump discharge or line direction change as possible and at a minimum length of 5 times the pipe diameter.

Do not use for reciprocating air compressor service.

# AHEAD OF THE FLOW®

# **NIBCO<sup>®</sup> Press System<sup>®</sup> Ball Valve Handle Options**

A wide variety of handles are available to fulfill safety and operation requirements in various processing and manufacturing industries. The lever handle with plastic cover is standard. Other handle options are shown. Stainless steel lever handles are available, as an option, also with plastic covers. If an optional handle is desired, please indicate which one when ordering. Many of these options are field assembly only.

# NIBCO<sup>®</sup> Press System<sup>®</sup> Bronze Ball Valves NIB-SEAL<sup>®</sup> Technical Data

# NIBCO<sup>®</sup> bronze ball valves installed with NIB-SEAL<sup>®</sup> insulated handles are the only approach that keeps your insulated piping system completely intact.

The revolutionary NIB-SEAL<sup>®</sup> bronze ball valve stops condensate cold. Its unique thermal barrier design keeps moisture from infiltrating your insulated system while preventing thermal energy loss through exposed metal handles.

Designed for new installations or retrofitting existing systems, NIB-SEAL bronze ball valves offer a wide range of advantages for typical commercial HVAC systems as well as industrial applications where insulated piping is desirable.

- Protective sleeve provides a stationary surface to affix the insulation, allowing operation and maintenance of the valve without destroying the integrity of the insulated system.
- High-strength cylindrical handle design features easy access to standard adjustable memory stop for system balancing. The valve packing is also readily accessible for routine maintenance.
- Cap and insulating plug provide a vapor seal to prevent exchange of air to maximize the efficiency of your insulated piping system.
- · Position indicators allow at-a-glance determination of whether valve is in open or closed position.
- · Pre-formed hole allows for convenient tagging.

**Butterfly Valve Options and Accessories** 

# Lever-Lock Operator (Standard)

PFD2000

THE FLOW®

The lever-lock handle and throttling plate provide throttling notches every  $10^{0}$  for excellent manual control in balancing up to  $90^{0}$  or shut off service. The valve may be padlocked in any one of the positions including opened or closed by virtue of a locking hole located in the handle and lever.

# **Position-Lock Operator (Optional)**

### PFD2000

The position-lock can be used to set the valve in any position or as a memory stop so the valve may be reopened to the previous position. The valve may be padlocked in full open or full closed position.

Ordering: Sold as a field retrofitable kit only.

## Gear Operator options and accessories (2 1/2" through 4" 2000 series only)

2" Square Operating Nut

Consult factory for: square operating nut, memory stop and flag indicator

Flag Indicator

Flag Indicator

# **Cast Iron Gear Operator**

The NIBCO<sup>®</sup> butterfly valve can be provided with heavy-duty operator and indicator. Recommended for valves 8" and larger, for trouble-free operation in all moisture and weather conditions (not submersible). Operator is a self-locking worm gear type. Equipped with adjustable stops at open and shut positions. Ordering: Specify by adding (-5) to Fig. No., i.e., PFD2000-5. Babbit sprocket may be added to handwheel. See below for sizing information. Available options: memory stop gear operator kit, 2" square operating nut, flag indicator and handwheel for GO.

Notes - 1. Stem adapter bushing must be ordered seperately when needed for smaller size valves.

2. All other accessories must be ordered separately. (Sprocket rim, square operator nut, flag indicator & memory stop kit.) 3. Gear operator comes with handwheel.

# AHEAD OF THE FLOW®

# **Butterfly Valve Technical Information**

# Valve Installation Procedure

Always position the connecting pipe flanges accurately in the line, allowing sufficient space between the flanges for the valve. Make sure the pipe flange faces are clean of any foreign material such as scale, metal shavings or welding slag. Valves should be installed with the disc in the closed position to prevent damage to sealing surfaces.

- 1. Carefully insert the valves between the pipe flanges. Do not apply any lubricants to the seat faces as this may damage them.
- Line up, center and secure the valve between flanges using desired bolts or studs as listed in Table 4. Do not tighten bolts at this time.
- Carefully open the valve to assure free unobstructed disc movement. Disc interference may result when valves are installed in pipelines having smaller than normal inside diameters, such as heavy wall pipe, plastic-lined pipe, as-cast flanges or reducing flanges. Interference can also occur when connecting directly to a swing check or silent check. Suitable corrective measures must be taken to remove these obstructions, such as taper boring the pipe or installing a spacer or spool piece.
- 4. After proper operation is verified, tighten the bolts using a cross-over pattern (Fig. 1) to the minimum recommended bolt torques listed in Table 3.
- Pressurize piping to valve and inspect for leakage. If leakage is observed, tighten bolts using cross-over pattern, increasing torque until leak stops.
   DO NOT EXCEED MAXIMUM TORQUES LISTED IN TABLE 3.
- 6. Recommended torques are made without warranty. Installer must verify proper strength bolts for application. Bolts shall be clean and un-lubricated.

#### Caution

85

- 1. Class 250 cast iron and Class 300 steel flanges can not be used on these valves.
- 2. Rubber faced or mechanical flanges are **not** recommended.
- 3. This valve is **not recommended** for steam service.

ST IRON KNESS

- 4. Valves should **not** be assembled to the flanges and then welded into the piping system.
- 5. Do not install EPDM liner in compressed air lines.

# **Resilient Liner Materials**

SIZE

**EPDM** – EPDM is a terpolymer elastomer made from ethylene-propylene diene monomer. EPDM has good abrasion and tear resistance and offers excellent chemical resistance to a variety of acids and alkalines. It is susceptible to attack by oils and is not recommended for applications involving petroleum oils, strong acids or strong alkalines. EPDM should not be used on compressed air lines. It has exceptionally good weather aging and ozone resistance. It is fairly good in ketones and alcohols.

| Liner Temperature Ratings |  |                   |  |  |  |  |  |  |
|---------------------------|--|-------------------|--|--|--|--|--|--|

Proprietary compound formulas are used for each of the elastomers to provide the right combination of seat compression, abrasion resistance and chemical resistance to match your application. Elastomeric seat materials are not suitable for steam service.

PC-1M, 2M, 3M Mini Pressing Jaws

**PC-4ML** 18V, 2.0 Ah Lithium-ion Battery

**PC-7L** 18V, 3.0 Ah Lithium-ion Battery

**PC-8L** 110V Battery Charger

PC-9L AC Adapter

**PC-50** 1/2" - 1" Deburring Tool

# **NIBCO<sup>®</sup> Press System<sup>®</sup> Tools**

# PC-280 & PC-20M FEATURES

# <u>T00LS</u>

#### Light weight

PC-20M Mini: 3.7 lbs. (without jaw) PC-280: 9.4 lbs. (without jaw)

#### Easy to handle / simple design

Jaws rotate 350° No calibration necessary No complicated switches or controls Mini: Ergonomic compact design is easy to use in tight spaces

#### Interruptible crimp cycle

Safety feature prevents injuries Can begin crimp, stop to align and level fitting / tube, and complete crimp

#### Battery

Can be changed during crimp cycle Lithium-ion has short charging cycle and larger capacity

• PC-4ML: 15 minute recharge time

• PC-7L: 22 minute recharge time

#### **AC Power Adapter**

Converts the tool to electric power Allows continuous use

#### Service light

Illuminates at 10,000 cycles

- Tool will not stop operating when light illuminates • RED indicates battery charge status, service
  - intervals, tool functions & faults
  - WHITE illuminates the work area

#### Hydraulic Pressure Check (HPC)

An audible warning signal sounds if adequate working pressure is not achieved

# PRESSING CHAINS (2 1/2" to 4" ONLY)

#### **Uniform crimp**

Maintains proper pipe alignment

#### Easy to install and remove

Once secured to fitting, chain cannot fall off prior to crimp Chain easily removed post crimp

#### **Crimp Identification**

Easy to identify crimp has been made from a distance

# PC-100 and PC-10M Accessories

### MATERIAL LIST

| MODEL<br>NO. | DESCRIPTION                                     | LBS.  |
|--------------|---|-------|
| PC-7         | 12V, NiMH Battery - 3.0Ah for PC-100            | 1.57  |
| PC-8         | 120V Standard Battery Charger for PC-6 or PC-7  | 1.10  |
|              |   |       |
| PC-4M        | 1.3 Ah NiCd 9.6V Battery for Mini Pressing Tool | 0.85  |
| PC-5M        | 120V Charger for Mini Pressing Tool             | 1.13  |
|              |   |       |
| PC-100C      | Metal Case for PC-100 Tool                      | 14.30 |

### CAUTION:

NIBCO press fittings and valves (21/2", 3", 4" ends) to be installed ONLY with NIBCO pressing tools & chains.

# **NIBCO pres**system Engineering Data

# **NIBCO<sup>®</sup> Press System<sup>®</sup> — Engineering Data Copper and Copper Alloy Fittings**

#### **Standards**

O-Ring seal joints are not new to the piping industry, but joining techniques like the NIBCO<sup>®</sup> Press System<sup>®</sup> are providing new alternatives for copper piping assembly. NIBCO has relied on its century of experience in copper and brass piping products to design the best performing and most dependable line of fittings possible.

### Applications

The NIBCO<sup>®</sup> Press System<sup>®</sup> fittings are designed to join with ASTM B 88 seamless copper water tube in residential and commercial potable, hot, chilled and process water applications for plumbing and HVAC systems. Copper and copper alloy materials and EPDM elastomeric seals have a long history of compatibility with common chemicals used in these systems. A chemical resistance chart should always be referenced when other fluids are to be introduced.

# NOTE: FLUIDS CONTAINING HYDROCARBON-BASED OILS ARE <u>NOT</u> COMPATIBLE WITH THE EPDM SEAL.

### **Pressure/Temperature Limitations**

-20°F to 250°F up to 200 PSIG, non-shock working pressure except where otherwise noted.

### **Materials:**

- wrot copper
  - ◆ ASTM B 75 Alloy C12200
- cast copper alloy
  - ◆ ASTM B584-12a Alloy C87600 and C84400
- elastomeric seals
  - ◆ EPDM O-Rings compliant with IAPMO PS-117 and ASME B16.51

NIBCO<sup>®</sup> press fittings meet all performance requirements of ASME B16.51

NOTE: freezing weather precaution — subsequent to testing a piping system, valve should be in an open position to allow complete drainage.

### Performance

The following performance tests were conducted per ASME B16.51. The fitting dimensions, materials of construction and performance tests were witnessed and verified by internationally recognized NSF. A letter of verification is available upon request:

- 1. Dimensional Verification
  - a. Inside diameter of press cup and waterway
  - b. Outside diameter of press cup and waterway
  - c. Wall thickness
  - d. Threaded ends conformance to ASME B1.20.1
- 2. Hydrostatic Minimum Burst Strength Pressure
  - a. Fitting samples hydrostatically tested to a minimum of 600 PSI (three times the rated internal working pressure) at 73°F.
- 3. Unrestrained Hydrostatic Pressure Test at 68°F (20°C) and 200°F (93°C)
  - Fitting assemblies were filled with water and pressurized to 600 PSIG at 68° and 200°F for 48 hours.
- 4. Static Torque
  - a. Fittings were filled with water, had a minimum torque applied and released. Each fitting was then pressurized to 400 PSIG for 48 hours.
- 5. Bending Test
  - a. A sample fitting was installed between two equal lengths of harddrawn copper tubing supported six (6) feet apart. A concentrated load was applied to the center of the fitting. The 1/2" thru 2" assemblies were subjected to 600 PSIG water pressure and 2-1/2" thru 4" were subjected to 400 PSI water pressure for one (1) hour at 68°F (20°C).
- 6. Vacuum Pressure Test
  - a. Fittings were subjected to a vacuum pressure of 24.5 inches of mercury for one (1) hour at 68°F (20°C).
- 7. Cyclic Pressure Test
  - a. Fittings were subjected to a hydraulic shock pressure of 400 PSIG for 10,000 cycles.
- 8. Vibration Test
  - a. Fitting assemblies were subjected to a hydrostatic cyclic vibration test at 400 PSIG and 2-1/2" thru 4" were subjected to 400 PSI water pressure for 1,000,000 cycles. After cycling, the 1/2" thru 2" assemblies were pressurized to 600 PSIG for 30 minutes and 2-1/2" thru 4" were pressurized to 400 PSI for 48 hours.
- 9. Thermocycling Test
  - a. Test assemblies were constructed using type L copper tube and press connect fittings. The test assemblies were subjected to flowing water at 145 psi cycled between 68°F (20°C) and 200°F (93°C) for a period of 15 minutes at each temperature for nominal size 2" and smaller. Nominal size 2 1/2" and larger were pressurized with air and immersed in water at 68°F (20°C) and 200°F (93°C). Cycling continued for 5,000 cycles for sizes 2" and smaller and 2,500 cycles for 2 1/2" and larger size fittings.
- 10. Dynamic Torque at 68°F (20°C) and 200°F (93°C)
  - a. Fittings were assembled between two lengths of hard-drawn copper tubing. With one tube fixed, the other tube twisted ±5° for 10,000 cycles at 68°F (20°C) or 200°F (93°C). Each assembly was then subjected to 400 PSIG water pressure at 68°F (20°C) or 200°F (93°C) for 1 hour.

Tests were performed with K and M hard drawn tubing. The thermocycle test used L hard drawn tube.

# FITTINGS

#### 2" and Smaller:

Fittings shall comply with NSF 61, CSA, UPC and be approved by the local jurisdiction. The NIBCO<sup>®</sup> Press System<sup>®</sup> may be used at the contractor's option for the following building services piping - 20°F to +250°F up to 200 PSI:

- Hot and Cold Domestic Water
- Potable Water
- Condenser and Chilled Water Service
- Hot Water Heating Service

Wrot copper press fittings shall be made from commercially pure copper mill products per ASTM B 75 Alloy C12200. Cast copper alloy press fittings shall be made from materials with a minimum of 78% copper and a maximum of 15% zinc. The press fittings connections shall be compatible with seamless K, L or M copper tube made to ASTM B 88. Fittings shall have a maximum non-shock working pressure of 200 PSI between the temperatures of -20°F and +250°F. Elastomeric seals shall be made of EPDM material, and the fittings shall be manufactured with an inboard bead design. All fittings shall be installed in accordance with the manufacturer's installation instructions and according to local plumbing and mechanical codes. The press-to-connect joint shall be made with pressing tools and jaw sets recommended and authorized by NIBCO.

#### 21/2" through 4":

Fittings shall comply with NSF 61, CSA, UPC and be approved by the local jurisdiction. The NIBCO<sup>®</sup> Press System<sup>®</sup> may be used at the contractor's option for the following building services piping - 20°F to +200°F up to 200 PSI:

### VALVES

#### 2" and Smaller Ball Valves: (on/off, isolation or throttling)

Ball valves with male or female press-to-connect ends shall be rated at 200 PSI CWP to +250°F maximum. Valves shall be manufactured in accordance with MSS SP-110 and constructed of dezincification resistant cast bronze bodies. No brass containing more than 15% zinc shall be approved. Valve shall have reinforced PTFE seats, blow-out proof stem, full-port ball, chrome/nickel plated ball or 316 SS ball for aggressive water conditions. Where piping is to be insulated, ball valves shall be equipped with 2" extended handles of non-thermal conductive material. Handle to have extended sleeve incorporating an insulation plug to provide a vapor barrier and allow valve operation without disturbing the insulation, and a memory stop, which can be set after installation.

#### Acceptable Valves: (non-insulated lines):

NIBCO® PC585-70, PF585-70 or PS585-70 (chrome/nickel plated ball) NIBCO® PC585-70-66, PF585-70-66, PS585-70-66 or PCM585-60 (316 SS ball)

#### Acceptable Valves: (insulated lines):

NIBCO® PC585-70-NS, PF585-70-NS or PS585-70-NS (chrome/nickel plated ball) NIBCO® PC585-70-66-NS, PF585-70-66-NS or PCM585-60-NS (316 SS ball)

(Note to Specifier: Include press gate valves in addition/in lieu of press ball valves for ON/OFF and isolation services if requested or required.)

#### 2" and Smaller Gate Valves: (On/Off and Isolation)

Gate valves with male or female press-to-connect ends shall be rated to 200 PSI CWP at +250°F maximum. Valves shall be manufactured in accordance with MSS SP-80. Valve body, bonnet and wedge to be manufactured of dezincification resistant cast bronze (ASTM B 62). Stems shall be of silicon bronze (ASTM B 371) or low zinc alloy (ASTM B 99). Non-asbestos packing and malleable or ductile iron hand-wheel shall be standard.

#### **Acceptable Valves:**

NIBCO<sup>®</sup> PF111 or PS111 - rising stem gate valve NIBCO<sup>®</sup> PF113 or PS113 - non-rising stem gate valve

#### 2" and Smaller Globe and Angle Valves: (Throttling Service)

Globe and angle valves with male or female press-to-connect ends shall be rated to 200 PSI CWP at +250°F maximum. Valves shall be manufactured in accordance with MSS SP-80. Valve body, bonnet and wedge to be manufactured of dezincification resistant cast bronze (ASTM B 62). Stems shall be of silicon bronze (ASTM B 371) or low zinc alloy (ASTM B 99). Non-asbestos packing and malleable or ductile iron hand-wheel shall be standard.

#### **Acceptable Valves:**

NIBCO<sup>®</sup> PF211-Y or PS211-Y - globe valve NIBCO<sup>®</sup> PF311-Y or PS311-Y - angle valve

#### 2" and Smaller Check Valves: (Back Flow Prevention)

Check valves (Y pattern, swing type or in-line) with male or female pressto-connect ends shall be rated at 200 PSI CWP to +250°F maximum. Valves shall be manufactured in accordance with MSS SP-80. Body and cap to be manufactured of dezincification resistant cast bronze (ASTM B 62 or ASTM B 584 Alloy C84400). Valves to have PTFE seat disc.

#### Visit our website for the most current information.

#### **Acceptable Valves:**

NIBCO<sup>®</sup> PF413-Y or PS413-Y - Y pattern, swing type check valve NIBCO<sup>®</sup> PF480-Y or PS480-Y - in-line spring loaded silent check valve

#### **Drain Valves**

At all low points in water piping to be drained or vented, provide 1/2" or 3/4" ball valves with male or female press-to-connect ends by hose-end drain valves. Valves shall be rated by 200 PSI CWP to +250°F maximum. Valves shall be manufactured in accordance with MSS SP-110. Valves to be constructed of dezincification resistant cast bronze bodies. Valve shall have reinforced PTFE seats, blow-out proof stem, and be full port. All valves shall be provided with 3/4" hose connection with cap and chain.

#### Acceptable Valves:

NIBCO® PS585-70-HC or PF585-70-HC

#### 2 1/2" thru 4" Butterfly Valves: (On/Off, Isolation or Throttling)

Butterfly valves with female press-to-connect ends shall be rated at 200 PSI CWP to +250°F maximum. Valves shall be manufactured in accordance with MSS SP-67 and constructed of a ductile-iron body, for bubble-tight shutoff, extended-neck for insulation, disc and lining suitable for potable water, valves shall be suitable for bi-directional dead end service at full rated pressure, one-piece Type 416 stainless-steel stem, copper bushing, fasteners and pins shall not be used to attach stem to disc, no pins or fasteners in waterway, aluminum-bronze disc, and molded-in EPDM seat (liner).

Acceptable Valves:

NIBCO<sup>®</sup> PFD2000 series

# **NIBCO pres**system Installation Instructions

# AHEAD OF THE FLOW®

# **NIBCO<sup>®</sup> Press System<sup>®</sup> — Installation Instructions**

# NIBCO<sup>®</sup> Press System<sup>®</sup>

The NIBCO<sup>®</sup> Press System<sup>®</sup>, when used with tested and authorized pressing tools and jaws, is designed to mechanically crimp fittings and valves onto copper tubing to create a watertight, permanent seal. When the switch on the pressing tool is depressed a small hydraulic pump generates thousands of pounds of crimping force to install the specially designed fittings and valves.

## **System Components**

### **Fittings and Valves**

NIBCO<sup>®</sup> Press System<sup>®</sup> copper or bronze fittings and valves

### Tubing

ASTM B 88 seamless Hard Drawn Copper Water Tube: Types K, L and M.

### **Pressing Tools, Chains and Jaws**

The pressing tool, chain and jaw are important parts of ensuring a reliable, permanent connection between NIBCO® Press System® fittings and valves and the copper water tube.

**CAUTION** — Use only pressing tools and jaw sets that have been tested and authorized for use with NIBCO<sup>®</sup> Press System<sup>®</sup> fittings and valves <sup>(1)</sup>. Use of unauthorized pressing tools and/or jaws may result in an improper seal that could cause extensive property damage.

### **Pressing Tool Safety**

- Only use authorized pressing tools and jaws with NIBCO<sup>®</sup> Press System<sup>®</sup> fittings and valves. Other uses or modification of the jaws for other applications may damage the press tool, damage the jaws and/or cause personal injury.
- Keep fingers and hands away from jaws during pressing cycle. Your fingers or hands can be crushed, fractured or amputated if they become caught between the jaw tips or between the jaw and any other object.
- Always wear safety glasses while using pressing tools and jaws.
- Never attempt to repair a damaged jaw set. A jaw that has been modified in any manner can fail during crimping resulting in serious injury. Discard the entire damaged jaw set. Replace with a new jaw set.
- **WARNING:** Please read these installation instructions and the manufacturer's pressing tool and jaw operators manual(s) carefully prior to installation of the NIBCO<sup>®</sup> Press System<sup>®</sup>. Failure to understand and follow the contents of this manual may result in extensive property damage, severe personal injury or death.

 $\label{eq:Please contact NIBCO Technical Services at 888.446.4226 \ if you have installation questions.$ 

(1) See approved tool and jaw compatibility matrix in this catalog

#### **Chemical Compatibility**

Please consult the most current edition of the NIBCO Chem-Guide for recommendations regarding chemical compatibility of material exposure to specific media and media-treatment additives. The NIBCO Chem-Guide is a general guide on the topic of chemical compatibility and is by no means an exhaustive resource on the subject. Ultimately, proper material selection is the responsibility of the installer and/or end-user, taking into account all aspects of a system's design and intended use.

#### **Galvanic Potential in Piping Systems**

Galvanic corrosion or dissimilar metal corrosion is an electrochemical process that is created through the electrical interaction of two different metals under the influence of a conductive media (i.e. an electrolyte). An electrolytic cell, much like a battery, is generated by these dissimilar metals using water as the electrolyte. The electrical charge, developed within the electrolytic cell, drives a preferential attack on the more electrically active metal with the water acting as the recipient of the discarded metal ions. Such galvanic attack is often encountered in service where iron or steel components are installed, and later corrode, in a largely copper piping system. Please consult NIBCO Technical Bulletin NTB-0714-01 Dielectric Products Relative to Electrolysis and Galvanic Corrosion.

# AHEAD OF THE FLOW®

Revised 3/11/2016

# **NIBCO<sup>®</sup> Press System<sup>®</sup> — Installation Instructions**

# Installation Instructions for 1/2" - 2" Press Fittings and Valves

**WARNING:** To prevent serious injury, inspect the pressing tool, battery charger (if applicable) and jaw sets according to the procedure outlined in the pressing tool instruction manual prior to beginning installation.

Failure to clean jaws can result in an improper connection that can lead to extensive property damage.

### **Preparing the Copper Tube**

1. Select clean, undamaged copper tube and cut to desired length. Cut tube end square using a tube cutter or fine-toothed saw. Do not crimp over damaged, scratched, gouged, or otherwise damaged tubing ends. Do not crimp over etch print streams on tubing. (*Figure 1*).

Figure 1 — Cut tube to desired length

- 2. Deburr the tube inside and outside diameter using a half-round file or a deburring tool.
- 3. Clean the tube <u>end</u> of all dirt, oil and grease. (Emery cloth or sandpaper to clean the tube or remove oxidation <u>should not be used</u>.)

### Inserting the Tube into the Fitting or Valve

1. Check the fitting to make sure the EPDM seal is in place, clean and free of dirt and debris (*Figure 2*).

Figure 2 — Check for EPDM Seal

**WARNING:** Never lubricate the EPDM seal in the NIBCO<sup>®</sup> Press System<sup>®</sup> fitting or valve with anything other than water. Oil-based lubricant, dirt or debris may damage the seal. An improper seal can lead to extensive property damage.

Figure 3 — Marking for Insertion Depth

- 2. Mark the tube with a permanent marker to indicate the proper tube insertion depth (*Figure 3*).
- 3. Refer to the minimum insertion depth table for correct depths
- 4. Insert the tube into the fitting or valve using a twisting motion. Make sure that the tube is fully inserted into the fitting stop or shoulder.

| Tube Size | Insertion Depth (min.) |    |  |  |  |
|-----------|------------------------|----|--|--|--|
| Inches    | Inches                 | mm |  |  |  |
| 1/2       | 11/16                  | 18 |  |  |  |
| 3/4       | 7/8                    | 22 |  |  |  |
| 1         | 7/8                    | 22 |  |  |  |
| 11⁄4      | 1                      | 25 |  |  |  |
| 11/2      | 13⁄8                   | 35 |  |  |  |
| 2         | 11/2                   | 38 |  |  |  |

**CAUTION:** Tubing that is difficult to insert may have burrs or could be out-of-round. Burrs must be removed and tubing end must be undamaged. Make sure tube is inserted to the proper depth. Failure to do so may result in an improper seal.

#### **Attaching Pressing Jaws**

- 1. Make sure the battery is removed or the cord is unplugged on the pressing tool prior to attaching or changing the crimp jaws.
- 2. Push and twist to open the jaw set mounting pin. (Figure 4).

Figure 4 — Pushing and twisting to open the jaw set mounting pin

3. If press tool contains a jaw set, slide it out of the crimping tool.

# **NIBCO®** Press System® — Installation Instructions

4. Select the jaw set that corresponds to the size of the joint to be crimped and insert the jaw set into the pressing tool (*Figure 5*).

Figure 5 — Inserting the NIBCO<sup>®</sup> Press System<sup>®</sup> jaw

- 5. Push the jaw set mounting pin until it clicks into position.
  - NOTE: The tool will not properly press unless the pin is fully engaged.

### Crimping a NIBCO<sup>®</sup> Press System<sup>®</sup> Fitting or Valve

1. Make sure the tubing is inserted to the proper depth in the fitting. *(Figure 6).* 

Figure 6 — Inserting the tube to proper depth

- 2. Squeeze jaw arms to open the jaw set.
- 3. Place the open jaws around the fitting and ensure that the contour of the jaw is properly aligned with the contour of the fitting (*Figure 7*).

Figure 7 — Open the jaw set and place around the fitting

4. Make sure the tool is perpendicular to the tubing and depress the switch (*Figure 8*). Keep the trigger depressed from the time the cycle begins and the rollers contact the jaw arms until the end of the entire crimp cycle.

Figure 8 — Jaw set should be square to tubing

5. Once the crimp is complete, press the jaw arms to open the jaw and remove from the fitting.

If the tool displays an LED flash or emits an audible alarm, please refer to the tool instruction manual for troubleshooting suggestions.

**CAUTION** Avoid handling sharp edges that may have formed on the fitting during the crimping operation.

#### **Inspecting the Crimp**

1. Inspect the crimped fitting to ensure proper crimp.

NOTE: The use of the NIBCO  $^{\circledast}$  Press System  $^{\circledast}$  jaw will produce a unique witness mark "N" on the crimped fitting.

- 2. Inspect the crimped fitting checking the connection for the following problems:
  - Not fully inserted tube, double check depth marks
  - Incorrect jaw alignment with the fitting contour

If any problems are found, a new section of tubing and a new fitting will need to be prepared, installed and crimped.

3. Test the NIBCO<sup>®</sup> Press System<sup>®</sup> in accordance with crimp intergrity testing instructions for fittings and valves in this catalog.

# AHEAD OF THE FLOW®

# **NIBCO®** Press System® — Installation Instructions

# Installation Instructions for 2 1/2" - 4" Press Fittings and Valves

**WARNING:** To prevent serious injury, the pressing tool, battery charger (if applicable) and pressing chains should be inspected according to the procedure outlined in the pressing tool instruction manual prior to beginning installation.

Failure to clean pressing chains can result in an improper connection that can lead to extensive property damage.

# **Preparing the Copper Tube**

1. Select clean, undamaged copper tube and cut to the desired length. Cut tube end square using a tube cutter or fine-toothed saw. Do not crimp over damaged, scratched, gouged, or otherwise damaged tubing. Do not crimp over etch print streams on tubing. (*Figure 1*).

Figure 1: Cut tube to desired length using s tube cutter

2. Deburr the tube inside diameter using a half-round file or deburring tool. Remove any copper shavings or filings (*Figures 2 & 3*).

Figure 2: Deburr inside diameter using a half-round file

Figure 3: Deburr inside diameter deburring tool

3. Deburr the tube outside diameter using a half-round file to prevent damage to the EPDM seal (*Figure 4*).

Figure 4: Deburr outside diameter using a half-round file

4. Clean the tube <u>end</u> of all contamination, oils and shavings. A smooth transition chamfer is recommended to ease tube insertion past the seal. (Emery cloth or sandpaper to clean the tube or remove oxidation <u>should not be used</u>.)

# Inserting the Tube into the Fitting or Valve

 Check the fitting to make sure that the seal is in place and is free of oil or grease. Only original NIBCO<sup>®</sup> EPDM seals are to be used when making a press connection with NIBCO<sup>®</sup> Press System<sup>®</sup> fittings and valves. If it is necessary to lubricate the seals, use water only. <u>DO NOT</u> use any petroleum-based lubricants (*Figure 5*).

Figure 5: Check for EPDM seal

**WARNING:** Never lubricate the EPDM seal in a NIBCO<sup>®</sup> Press System<sup>®</sup> fitting or valve with anything other than water. Oil-based lubricants, dirt or debris may damage the seal. An improper seal can lead to extensive property damage.

2. Mark the proper insertion depth on the tube with a permanent marker <u>prior</u> to insertion, based on insertion depth chart. Refer to minimum insertion depth table for correct depths.

| NIBCO <sup>®</sup> Press System®<br>Insertion Depth Chart |                           |                    |                    |  |  |  |  |
|---|---------------------------|--------------------|--------------------|--|--|--|--|
| Tube Size   | <b>2</b> <sup>1</sup> /2" | 3″                 | 4″                 |  |  |  |  |
| Insertion Depth (min.)                                    | 1 <sup>1</sup> /2″        | 1 <sup>5</sup> /8″ | 2 <sup>1</sup> /8″ |  |  |  |  |

 Insert the tube into the fitting or valve using a twisting motion. Make sure that the tube is fullly inserted into the fitting or valve. WARNING: If tube is not inserted to the proper depth, an inadequate seal may result.

**CAUTION:** Tubing that is difficult to insert may have burrs or could be out-of-round. Burrs must be removed and tubing end should be undamaged. Make sure tube is inserted to the proper depth. Failure to do so may result in an improper seal.

Revised 3/11/2016

# **NIBCO®** Press System® — Installation Instructions

### Crimping a NIBCO<sup>®</sup> Press System<sup>®</sup> Fitting or Valve

- 1. Make sure that the battery is removed or that the cord is unplugged on the pressing tool prior to attaching or changing the adapter jaw.
- 2. Select the correct size pressing chain. Pull the pin on the chain which allows the segments to open. Position the chain on the raised bead and wrap the chain around the fitting with the "pipe side" designation facing the tube. When the chain is fully wrapped around the fitting, reinsert the pin to secure the chain on the assembled joint. Visually inspect the mark made for insertion depth, to ensure the tube remained in position (*Figure 6*).

Figure 6: Placement of the pressing chain onto fitting or valve

3. Release the pin (push and twist) on the jaw holder of the pressing tool, and install the adapter jaw on the tool. Return the pin to its original position, securing the jaw. The red sleeve on the tool must be in the back position to allow for crimping sizes 2½", 3" and 4". (*Figure 7*).

Figure 7: Placement of adapter jaw into the tool

4. Squeeze adapter jaw arms to open the jaw. Rollers must be fully retracted to open the adapter jaw. Place the open adapter jaw into the grooves in the pressing chain and let go of the jaw arms (Figure 8).

Figure 8: Placement of adapter jaw into pressing chain

- 5. Make sure the tubing is inserted to the proper depth in the fitting or valve, and that the tube and fitting or valve are aligned properly.
- 6. With the pressing tool perpendicular to the tube, begin the pressing cycle by pulling the trigger of the pressing tool.
- Keep the trigger depressed from the time the cycle begins and the rollers contact the jaw arms until the end of the entire cycle. Remove the pressing tool and adapter jaw from the pressing chain. Remove the pressing chain from the fitting.

If the tool displays an LED flash or emits an audible alarm, please refer to the toolinstruction manual for troubleshooting suggestions.

**CAUTION:** Avoid sharp edges that may have formed on the fitting during the crimping operation.

### **Inspecting the Crimp**

1. Inspect the crimped fitting or valve to ensure proper crimp. The final crimp should appear pressed uniformly around the fitting or valve (*Figure 9*).

Figure 9: Inspection of final crimp

NOTE: The use of the NIBCO  $^{\textcircled{B}}$  Press System  $^{\textcircled{B}}$  chain will produce a unique witness mark "N".

- 2. Inspect the crimped fitting checking the connection for the following problems:
  - Not fully inserted tube, double check depth marks
  - Incorrect chain alignment with the fitting contour
  - If any problems are found, a new section of tubing and a new fitting will need to be prepared, installed, and crimped.
- 3. Test the NIBCO<sup>®</sup> Press System<sup>®</sup> in accordance with crimp integrity testing instructions for fittings and valves in this catalog.

# NIBCO<sup>®</sup> Press System<sup>®</sup> — Crimp Integrity Testing Instructions for Fittings & Valves

# **PRESSURE TESTING:**

NIBCO recommends the following leak testing procedures when installing NIBCO<sup>®</sup> Press System<sup>®</sup> with the leak detection feature. These test procedures allow the installer to find un-pressed connections while the system is being tested under pressure. The uniquely designed EPDM o-ring allows fluids or gases to flow past the seal and leak when the fitting has not yet been pressed. When the fitting has been pressed, the o-ring will create a water tight seal around the tube.

# AIR LEAK TESTING:

- 1. Pressurize system up to 15 psi maximum using dry, oil free compressed air, carbon dioxide, or nitrogen.
- 2. Allow system pressure to stabilize for a minimum of 2 hours.
- 3. If system pressure has dropped, add more air to bring entire system up to 15 psi maximum. If system pressure increases above 15 psi, bleed off excess pressure to ensure system is at a maximum pressure of 15 psi.
- 4. If the system pressure continues to drop, inspect all joints for un-pressed fittings. The NIBCO<sup>®</sup> Press System<sup>®</sup> press fittings with the leak detection feature are designed to leak in an un-pressed condition.
- 5. Check all press joints for air leaks using a commercially available leak test solution or a soap and water mixture.
- 6. Once the system has been confirmed to be leak free, pressure can be increased to the recommended working pressure to verify system integrity.

# WATER LEAK TESTING:

- 1. Pressurize system up to 50 psi maximum using potable water.
- 2. Allow system pressure to stabilize for a minimum of 2 hours.
- 3. If system pressure has dropped, add more water to bring entire system up to 50 psi maximum. If system pressure increases above 50 psi, bleed off excess pressure to ensure system is at a maximum pressure of 50 psi.
- If the system pressure continues to drop, inspect all joints for un-pressed fittings. The NIBCO<sup>®</sup> Press System<sup>®</sup> press fittings with the leak detection feature are designed to leak in an un-pressed condition.
- 5. Check all press joints for leaking water.
- 6. Once the system has been confirmed to be leak free, water pressure can be increased to the recommended working pressure to verify system integrity

### SYSTEM INTEGRITY TESTING\*:

**Once a system has been confirmed to be properly installed and no press connections have been left uncrimped**, the system is recommended for testing up to the maximum non-shock working pressure of 200 psi hydrostatic.

NOTE: While NIBCO Press System products are tested to pressures as high as 600 psi, the product system rating limitation of 200 psi is in place to ensure a safety factor of three-times proof-testing according to ASME B16.51 Copper and Copper Alloy Press-Connect Pressure Fittings.

# SYSTEM INTEGRITY TESTING AT HIGHER PRESSURES\*:

NIBCO Press System products can be tested at hydrostatic pressures higher than 200 CWP, not exceeding a maximum pressure of 300 psi hydrostatic for a maximum test duration of 24 hours, when assembled and tested according to the methods prescribed above.

**CAUTION:** These testing parameters and protocols apply only to NIBCO products as detailed above: NIBCO accepts no responsibility or liability for any other manufacturer's products that may be damaged as a result of such testing.

\*System integrity testing applies to leak detect and non-leak detect fittings and valves.

# **NIBCO®** Press System® — Installation Instructions

### **Minimum Distance Between Joints**

To prevent distortion of the tubing, certain fitting sizes require a minimum distance between crimp joints (refer to *Chart 1* below). Failure to provide this minimum distance may result in an improper seal.

|           | A (min.) |    |  |  |  |
|-----------|----------|----|--|--|--|
| Tube Dia. | Inches   | mm |  |  |  |
| 1/2"*     | 0        | 0  |  |  |  |
| 3/4**     | 0        | 0  |  |  |  |
| 1"*       | 0        | 0  |  |  |  |
| 11/4"*    | 0        | 0  |  |  |  |
| 11/2"*    | 0        | 0  |  |  |  |
| 2"*       | 0        | 0  |  |  |  |
| 21/2"     | 3/8"     | 10 |  |  |  |
| 3"        | 3/8"     | 10 |  |  |  |
| 4"        | 3/8"     | 10 |  |  |  |

\*No minimum distance required.

### **System Support**

**CAUTION** — In any installation, the system should be suported to ensure the minimum stress is imposed on the tube and joints. The NIBCO<sup>®</sup> Press System<sup>®</sup> should be supported in accordance with normal practice and to local jurisdiction piping code.

### **Annealing of Copper Tube**

A NIBCO<sup>®</sup> Press System<sup>®</sup> installation should not be conducted within 12" of a **brazed** joint. The high temperature required for capillary joinery may cause the copper tube to become annealed and render it too soft for proper crimping. However, a NIBCO<sup>®</sup> Press System<sup>®</sup> product may be crimped adjacent to a **soldered** joint, as normal temperatures created by silver soldering are not hot enough to cause the copper tube to become annealed.

**CAUTION** — Brazing or soldering should not be conducted within 12" of an existing NIBCO<sup>®</sup> Press System<sup>®</sup> connection as this may damage the EPDM seal. If there is any concern about heat damage to the o-ring, a cold, wet cloth should be wrapped around the crimped connection prior to soldering or brazing.

Visit our website for the most current information.

## Spacing

1. Sufficient clearance must be left around each joint to allow room for the pressing tool and jaw to be attached without interference.

Clearance Requirements — Standard Jaw Sets

### **Tool perpendicular to wall**

| Tube Dia.         | A (m              | in.) | B (min.)          |     |  |
|-------------------|-------------------|------|-------------------|-----|--|

# **NIBCO<sup>®</sup> Press System<sup>®</sup> — Frequently Asked Questions**

# What is the NIBCO product offering?

The NIBCO<sup>®</sup> Press System<sup>®</sup> features a full range of copper and copper alloy fittings, commercial valves, accessories and pressing tools, jaws and chains for use with K, L and M copper water tube.

# What is the system temperature rating?

The NIBCO® Press System® is rated at 200 PSIG over a temperature range of -20°F to 250°F.

### What are the approved system applications?

Approved applications include residential and commercial potable, hot, chilled and process water for plumbing and HVAC systems. The NIBCO<sup>®</sup> Press System<sup>®</sup> is designed for use with water glycol mixtures of ethylene or propylene glycol up to 50% at 200°F.

### What was the testing protocol for the NIBCO® Press System® fittings and valves?

NIBCO<sup>®</sup> Press System<sup>®</sup> fittings and valves were subjected to a wide range of performance tests including dimensional verification, thread end specification, hydrostatic burst strength, unrestrained pressure, static torque, bending, vacuum pressure, cyclic pressure, vibration, thermo-cycling and dynamic torque. The testing protocol included testing to a 3X safety factor above the 200 PSIG system rating.

NIBCO testing was witnessed and validated by the internationally recognized NSF.

### Can other available pressing tools and jaws be used on the NIBCO® Press System®?

See page 44 for a complete listing of approved tools and jaws.

## Can a NIBCO® Press System® connection be re-crimped?

If for any reason the press cycle is interrupted, it is possible to re-crimp a NIBCO<sup>®</sup> Press System<sup>®</sup> connection. However, when re-crimping the connection, the jaws <u>must</u> be properly aligned so that the crimp is performed in the same location as the original.

### How long will the EPDM seal last?

Accelerated life tests show that the EPDM seals used with the NIBCO<sup>®</sup> Press System<sup>®</sup> fittings and valves have a life expectancy of 50 years.

### Are NIBCO® Press System® fittings available with solder or threaded by Press System connection?

NIBCO offers many Press System fitting combinations by soldered or threaded connection. Please note, always solder the standard wrot connection first when possible. Prior to soldering, remove the press end EPDM o-ring, solder, allow the fitting to cool, insert the EPDM o-ring, and then Press the connection.

### Can a fitting be soldered close to a Press System connection?

NIBCO recommends soldering at least 12 inches away from the Press System connection. If this length is not possible, either solder the joint prior to connecting the press fitting or wrap the connection with a cold wet cloth.

## Is the NIBCO® Press System® approved for underground use?

In accordance with local plumbing codes, the NIBCO® Press System® can be installed underground.

## Is the NIBCO® Press System® compatible with standard disinfectant cleaning agents commonly utilized in a new water system?

Yes, the NIBCO<sup>®</sup> Press System<sup>®</sup> is typically compatible. For specific cleaning agent compatibility, contact NIBCO Technical Services at the below noted number.

# **NIBCO® Press System® Fittings Limited Warranty**

### **NIBCO INC. LIMITED WARRANTY**

Applicable to NIBCO INC. Press System® Fittings

NIBCO INC. warrants: NIBCO® Press System® fittings and flanges to be free from defects in materials and workmanship under normal use and service, for a period of 50 years from the Warranty Commencement Date. The Warranty Commencement Date for NIBCO® Press System® fittings and flanges shall be the date upon which the fitting or flange is installed.

This limited warranty applies to all NIBCO Press System<sup>®</sup> fittings and flanges installed in accordance with NIBCO approved and published installation, testing, and application recommendations and instructions. This includes product installed in accordance with the Press Tool & Jaw Compatibility Matrix in effect at the time of installation as published in the most current online version of the NIBCO Press System<sup>®</sup> Catalog.

NIBCO does NOT warrant against failure of NIBCO® Press System® fittings and flanges (referred to hereafter as "product") for:

- 1. any product, parts or systems which are not manufactured or sold by NIBCO INC.;
- 2. any product which is used for any purposes other than a purpose authorized by NIBCO INC.;
- 3. any product not installed in accordance with either the recommended installation guidelines provided by NIBCO INC. and/ or applicable plumbing codes;
- 4. damage to the product caused by, contributed in whole or in part by, or resulting from, any of the following:
  - a. abuse, misuse, mishandling, tampering, neglect or accidental damage, such as, without limitation, vandalism
  - b. natural disasters, such as, without limitation, flooding, windstorm and lightning
  - c. attachments or modifications to the product that are not authorized by NIBCO INC.
  - d. external causes, where external, physical or chemical qualities produce damage to the product, such as, without limitation, variation in water quality, aggressive water or an unsuitable or hostile environment, or
  - e. any other cause beyond the control of NIBCO INC.

NIBCO shall NOT be liable under any circumstances for any other direct or indirect, incidental or consequential damages of any kind, including but not limited to loss of business, lost profits, mold intrusion, water damage, etc. The liability of NIBCO under this warranty is solely limited to the repair or replacement, including installation expenses, of any product that has been determined by NIBCO INC., or an authorized representative or agent thereof, to contain a defect in material or workmanship.

This warranty is the only warranty for the product provided by NIBCO INC., and is and shall be in lieu of any and all other warranties, expressed or implied, including but not limited to an implied warranty of merchantability, and for all other obligations or liabilities on the part of the Manufacturer. No employee of NIBCO INC., or any other distributor, agent or other person or business, is authorized to make any other warranty on behalf of NIBCO INC.

In the event any defect occurs which is believed to be covered by this warranty, NIBCO Technical Services should be immediately contacted either in writing or by telephone at 888.446.4226. NIBCO Technical Services will make further arrangements for the product's return to NIBCO INC. for review and evaluation. In the event that a returned product is determined by NIBCO INC. to be defective, NIBCO INC. will remediate the failure by repairing or replacing the product within a reasonable time, without charge to the owner of the product.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

To the best of our knowledge, the information contained in this publication is accurate. However, NIBCO does not assume any liability whatsoever for the accuracy or completeness of such information. Final determinations of the suitability of any information or product for the use to be contemplated is the sole responsibility of the user. The manner of that use, and whether there is any infringement of patents, is also the sole responsibility of the user.

# NIBCO<sup>®</sup> Press System<sup>®</sup> Valves Warranty

### NIBCO INC. 125% LIMITED WARRANTY

Applicable to NIBCO INC. Pressure Rated Metal Valves

NIBCO INC. warrants each NIBCO<sup>®</sup> pressure rated metal valve to be free from defects in materials and workmanship under normal use and service for a period of five (5) years from date put into service, with the exception of models PC-FP600A-LF, for which a two (2) year warranty period from date put into service applies.

In the event any defect occurs which the owner believes is covered by this warranty, the owner should immediately contact NIBCO Technical Services, either in writing or by telephone at (888) 446-4226 or (574) 295-3000. The owner will be instructed to return said product, at the owner's expense, to NIBCO INC., or an authorized representative for inspection. In the event said inspection discloses to the satisfaction of NIBCO INC. that said valve is defective, it will be replaced at the expense of NIBCO INC. Replacements shall be shipped free of charge to the owner. In the event of the replacement of any valve, NIBCO INC. shall further pay the owner the greater of Twenty-Five (25%) Percent of the price of the valve according to the NIBCO INC. published suggested list price schedule in effect at the time of purchase, or Ten (\$10.00) Dollars, to apply on the cost of the installation of said replacement valve.

TO THE EXTENT PERMITTED BY LAW, THIS WARRANTY SPECIFICALLY EXCLUDES INCIDENTAL AND CONSEQUENTIAL DAMAGES OF EVERY TYPE AND DESCRIPTION RESULTING FROM ANY CLAIMED DEFECT IN MATERIAL OR WORKMANSHIP, INCLUDING BUT NOT LIMITED TO, PERSONAL INJURIES AND PROPERTY DAMAGES. Some states or countries do not allow the exclusion or limitation of incidental or consequential damages so these limitations may not apply to you. TO THE EXTENT PERMITTED BY LAW, IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE LIMITED IN DURATION.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state and country to country.

The NIBCO® Press System® Warranty for tools, chains and jaws can be found at www.nibco.com, or by consulting NIBCO® Technical Services at 1.888.446.4226.

# how to order

State quantity, figure number and size for each valve you wish to order. See individual valve catalog pages for specific or special product designations.

#### **HOW MANY TO ORDER**

NIBCO valves are decimal packed for your convenience in handling, shipping and stock-keeping. Number in master carton varies with item.

#### POLICY ON RETURNS TO FACTORY

NO NIBCO® valves are to be returned without prior written agreement. Transportation must be prepaid. A 20% charge will be made to cover cost of rehandling and reinspection.

#### **TECHNICAL ASSISTANCE**

Engineers, contractors, wholesalers or manufacturers may obtain special or technical assistance from any factory representative of NIBCO. Write, fax or phone.

It's a new age of business, and a new way at NIBCO. From Elkhart, Indiana to Lodz, Poland, and points beyond, our company has integrated manufacturing, distribution. and networked communications to provide a seamless source of information and service. 24 hours a day, 7 days a week. But this integration hasn't happened overnight. It's been part of a long-term strategic process that has pushed us to reconsider every aspect of our business. The result? We're a vertically integrated manufacturer with the products and systems in place to deliver low cost and high quality. NIBCO products are manufactured under a Quality Management System conforming to the current revision of ISO-9001 International Standards. We know the flow control industry is only going to get more demanding, and we are more than ready. We will continue to lead. That's what NIBCO is all about.
