# New Product Announcement | Series GC7000

## High Volume Water Reels
### Series GC7000

Engineers at Reelcraft have successfully taylored our Series 7000 reels to better serve those applications that require a large volume of water. The Series 7000 is valued for its strength and long service life. Completing the package, the Series GC7000 offer a brass on/off valve, nickle plating on standard swivels, and a 10' inlet hose. Available with 35' of standard 5/8" garden hose or more substantial 25' of 3/4" PVC hose, these reels are a practical solution to your high volume water dispensing needs.

### Benefits

- **Corrosion Resistance** - Each individual steel component has a baked-on powder coat finish. Swivel is nickel plated and ball valve is brass. The end result provides excellent resistance to weathering, abrasion and corrosion.
- **Structural Strength** - Base and guide arms are formed from high-grade steel and engineered with structural forms and gussets. The base is robotically welded and fasteners are vibration-proof and self-locking.
- **Safety** - Keeps long lengths of hose up and out of way, reducing occurences of slip, trips, or falls. Drive spring is banded for safety during maintenance.

### Related Products

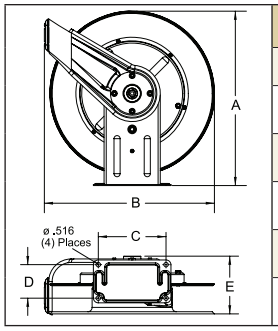

Reelcraft offers a host of other golf course reels. In addition we offer other models in a hand crank or motorized version. For a complete product listing visit us online at www.reelcraft.com or call toll free 800-444-3134.
