PIPE & COUPLING

HOW TO ORDER

Guide To Ordering

1. To avoid errors, specify part numbers.
2. When selecting regular fittings, size of openings appear in this order:
 1. Main
 2. Branch or branches
3. When selecting reducing/increasing fittings, size appears as illustrated:

Hub & Spigot:

1. Spigot of Main
2. Hub of Main
3. Branch (Branches) or Side Openings
4. Length

No Hub:

1. Bottom Outlet
2. Top Inlet
3. Branch (Branches) or Side Openings
4. Length

RH (Right Hand) Fittings Illustrated

4. When selecting long fittings, long bends are measured from the spigot (outlet) to the centerline of the hub (inlet); long branch fittings are measured from the spigot (outlet) to the base of the hub (inlet).
5. To specify right or left side openings, position fittings as follows and read left or right...
 - a. Bends, face open hub (inlet) with spigot (outlet) down.
 - b. Branch fittings, face open hub (inlet) of main with branch down.
6. All pipe and fittings are furnished coated.

STANDARDS & SPECIFICATIONS

Piping to be installed for the various services shall be as specified or in accordance with local plumbing codes:

CURRENT STANDARDS

× NO-HUB® Cast Iron Soil Pipe and Fittings:

CISPI 301 (Cast Iron Soil Pipe Institute) ASTM A
888 (American Society for Testing and
Materials)

× NO-HUB® Couplings

CISPI 310 (Cast Iron Soil Pipe Institute)
ASTMC 1277. (American Society for Testing and
Materials)
ASTMC 1540. (American Society for Testing and
Materials)

SV Hub and Spigot Cast Iron Soil Pipe and

Fittings:

ASTM A 74 (American Society for
Testing and Materials)

Hub & Spigot Gaskets:

ASTM C 564 (American Society for
Testing and Materials)

PIPE & COUPLING

RUFWALL NO-HUB SPECIAL FITTINGS

The **by-pass fitting** permits in-line piping to reduce width of the chase, and individual venting of the lavatories.

Tub wye fittings accept waste from two tubs and provide a common vent. They save space, materials and the labor to install duplicate systems.

NOTE:

Rufwall fittings are sold and shipped as normal cataloged soil products.

This publication contains the information needed to place orders with your customer service representative.

RufWall Savings with Back Outlet Fixtures (Compared with Conventional Piping)

- Fewer floor penetrations
- Eliminates cost of dropped ceilings to conceal pipe
- No scaffolding needed
- One-man installation
- Waist-high venting
- Water closet easier to install...faster

- (2) 7/16" I.D.x1" O.D. Flat Washer
- (2) 7/16" I.D.x1" O.D. Fiber Washer
- (2) 7/16" I.D.x1" O.D. Chrome Plated Washer
- (4) 3/8"-16 Hex Nut

Composed of:

Dwg. No.	Quantity	Description
2	(1)	300 C-11 Plastic Nipple
3, 5	(1)	4FA Finish Hardware Bag
4	(2)	R31, 3/8"-16 NC2x14" Lg. Thd. Rod
(1)		LD4 Wadetite Sealent

WALL MOUNT FACEPLATE ASSEMBLY

Fitting **NOT** furnished,
shown for position only.

Wall Mount Faceplate Assembly

Part No.	Description
376187	360-FP Faceplate Assembly

Composed of:

Dwg. No.	Quantity	Description
2	(1)	360-FP Carrier Faceplate
3	(2)	300-F Support Foot
4	(1)	300 C-11 Plastic Nipple
6, 8, 9	(1)	47R Hardware Bag
5, 11	(1)	IFA Finish Hardware Bag
10	(4)	R18, 5/8"-11NC2x15" Lg. Thd. Rod
7	(1)	360 Anchor Foot Assembly

47R Hardware

- (4) B-214H 1/2"-13NC2 x 1 1/4" Long Hex Hd. Bolt
- (8) 210 7/16" I.D. x 1-3/8" O.D. Flat Washer
- (3) B211H 3/8"-16NC2 x 1 1/4" Long Hex Hd. Bolt
- (3) 203 7/16" I.D. x 1" O.D. Flat Washer
- (4) 5/8"-11 Hex Nut

IFA Finish Hardware

- (1) GI-MB Neo Sponge Bowl Gasket
- (4) Chrome Plated Washer Nut
- (4) 1 1/16" I.D.x1-3/4" O.D. Fiber Washer
- (1) 5/8"-11 NC2 Bowl Saver Nut
- (3) 1 1/16" I.D.x 1-3/4" O.D. Steel Washer
- (4) 5/8"-11 Hex Nut

TYLER NO-HUB VALU-PAK LIST

Heavy shrink wrapped for stability and packaged on pallets for easier movement, these TYLER VALU-PAKS help simplify ordering and inventory. They take less space in your storage yard, too. VALU-PAKS are priced less than an equal number of individual fittings.

LUBRI/FAST® LUBRICANT

Part No.	Size
005148	Quart

LUBRI/FAST

- The unique LUBRI/FAST® formula makes joining TY-SEAL gaskets easier and faster because it's so slick! Applied as a liquid, LUBRI/FAST® actually reduces joining forces required; then it literally "fastens" the joint.
- LUBRI/FAST® is applied with an ordinary paint brush. It may be used for joining all pipe and fittings, and is **required** for joining all larger diameters 5" through 15".

TY-SEAL® LUBRICANT

Part No.	Size
005117	Quart

- An excellent water-soluble joint compound, TY-SEAL LUBRICANT has demonstrated its efficiency in millions of joints.
- Quick and easy to use under all conditions... even under water!

SOIL PIPE PULLER 234

To Assemble Fittings
Place yoke behind hub, adjust bar to length of fitting and pull handle to join in soil pipe.

FREQUENTLY ASKED QUESTIONS - SOIL DIVISION

1. Question: From what elastomers are the sealing sleeves for the Standard NO-HUB and HUSKY couplings made, and what is the highest water temperature that it will handle?

Answer: The gasket elastomer used in the manufacture of the NO-HUB and HUSKY sealing sleeves is Neoprene in accordance with ASTM C 564. The properties of Neoprene make it suitable for moderate chemicals and acids, oil fats, greases, many solvents and air with hydrocarbons. Neoprene will not support combustion. The maximum temperature that Neoprene will accommodate with continuous service is 203°F. with a maximum intermittent temperature of 212°F. Neoprene is the only gasket elastomer offered with these couplings.

2. Question: From what elastomer are the standard TY-SEAL and EZ-TITE gaskets made and what is the highest water temperature they will handle? Are these gaskets available in other elastomers?

Answer: The elastomer used in the manufacture of the TY-SEAL and EZ-TITE gaskets is Neoprene in accordance with ASTM C 564. The properties of Neoprene make it suitable for moderate chemicals and acids, oil fats, greases, many solvents and air with hydrocarbons. Neoprene will not support combustion. The maximum temperature that Neoprene will accommodate with continuous service is 203°F with a maximum intermittent temperature of 212°F. Neoprene is the only elastomer that Tyler Pipe offers with EZ-TITE gaskets. Tyler does offer the TY-SEAL gaskets in Buna-N (also known as Nitrile or NBR) which afford a 239° continuous service temperature maximum. Buna-N gaskets are suitable for gasoline, diesel, petroleum products, hydrocarbons, mineral water and vegetable oils.

3. Question: What is the pressure rating for the NO-HUB and HUSKY couplings?

Answer: Couplings for Drain, Waste and Vent are not pressure rated. They are designed to hold 4.3 psi (10 ft. of head) for hydrostatic testing purposes as stated in CISPI 310. The NO-HUB, HUSKY 2000 and HUSKY 4000 couplings meet the performance criteria of FM 1680, all classes.

4. Question: What is the pressure rating for the TY-SEAL and EZ-TITE compression gaskets for hub and spigot joints?

Answer: Drain, Waste and Vent compression gaskets for Service Weight pipe and fittings (TY-SEAL and EZ-TITE) are not pressure rated. They are designed to hold 4.3 psi (10 ft. of head) for hydrostatic testing purposes as recommended in the Cast Iron Soil Pipe Institute Handbook.

5. Question: Are the couplings sold by Tyler Pipe for hubless applications UL or FM approved?

Answer: No plumbing code requires UL certification for couplings. All couplings manufactured by Tyler Pipe meet the performance requirements of FM 1680, all classes, however they are not listed by Factory Mutual.

FREQUENTLY ASKED QUESTIONS - SOIL DIVISION

PIPE & COUPLING

6. Question: If there is no pressure rating for TY-SEAL/EZ-TITE Gaskets or NO-HUB couplings, what will keep the joints from separating if a line backs up?

Answer: It is necessary to understand the difference between pressure and thrust. Thrust is equal to the hydrostatic pressure (4.3 psi @ 10 ft. of head) multiplied by the area. As a cylinder is filled with water, thrust forces are exerted on all changes of direction, bends, branches, fittings with reductions and ends of runs. These locations must be restrained in order to prevent joint movement or separation. On a vertical run, the weight of the pipe helps to stabilize the joints on the run, but proper restraints are still necessary.

7. Question: Are the couplings sold by Tyler Pipe for hubless applications fire protection rated?

Answer: No. Since the Neoprene sleeve is completely protected by a non-flammable stainless steel shield, fire rating is not required.

8. Question: Is adhesive lubricant required to join SV pipe and fittings with TY-SEAL or EZ-TITE gaskets?

Answer: Tyler Pipe requires the use of adhesive lubricants for sizes 5" diameter and larger. On sizes 2" through 4", regular non-adhesive lubricant may be used.

9. Question: Does Tyler sell an adhesive lubricant?

Answer: Yes. Tyler offers LUBRIFAST® LUBRICANT which affords easy installation application while literally "fastening" the joint.

10. Question: Can I use an adhesive lubricant with NO-HUB couplings?

Answer: Tyler Pipe Company does not require or encourage the application of any type of lubricant with NO-HUB couplings. Although lubricants will have no adverse effect on cast iron pipe and fittings or the Neoprene sleeve of the coupling, some codes will not allow any lubricant to be applied to NO-HUB couplings. Before using any lubricant with NO-HUB or any other hubless coupling connector, check the applicable codes for restrictions.

11. Question: What is the maximum deflection of an SV or NO-HUB joint?

Answer: 5° per joint is the maximum allowable deflection for SV and NO-HUB connections.

12. Question: What coating does Tyler apply to its pipe and fittings?

Answer: Tyler Pipe applies a smooth even layer of bituminous petroleum asphalt coating through a dipping process for each piece of SV and NH pipe and all fittings. This coating affords a measure of corrosion protection as well adding cosmetic value.

13. Question: What is Tyler's recommended procedure for hydrostatic testing of SV and NH pipe?

Answer: Ten feet of head for 15 minutes, properly restrained, as referenced in the Cast Iron Soil Pipe Institute Handbook.

14. Question: Can Tyler Pipe's hubless pipe, fittings and NO-HUB Couplings be used below grade?

Answer: Yes! None of the model codes place any restriction(s) on the use of hubless pipe, fittings or couplings below grade. However, it is advised to first check with the local jurisdictional code before installation to ensure that no local restrictions have been placed on hubless below grade applications.

PIPE O.D.'S

Because many items listed are not made by Tyler Pipe, we cannot be certain that all data is current or accurate. Please check with the product manufacturer for their most recent information.

Bracing:

To prevent movement, horizontal pipe and fittings 5" and larger should be suitably braced by the use of blocks, rodding or other suitable methods at every branch or change of direction.

Test:

For best results, test one floor (ten feet) at a time. The system should be properly restrained; all bends, changes of direction and ends of runs should be restrained.

Gasket Material:

Ez-Tight gaskets are made of Neoprene as the sole elastomer. The physical characteristics of the Neoprene ensure that the gasket will not decay or deteriorate from contact with effluents in the pipe or chemicals in the soil or air around the pipe.

Description:

Ez-Tight is a one-piece compression gasket. It is used for joining hub and spigot cast iron soil pipe and fittings made according to ASTM A 74.

Gasket Specification:

Ez-Tight gaskets conform strictly to ASTM Standard C 564, latest issue.

Joint Characteristics:

Gasket joints will not leak even if deflected as much as 5 degrees, or when subjected to vibration, seismic tremors, expansion, contraction, external or internal test pressure.

Physical Properties:

Property		Performance Requirement		ASTM Test Method
Hardness (nominal durometer ± 5) as specified by the pipe manufacturer	50	60	70	D2240

Ozone resistance: no cracks	no cracks	no cracks	D1149 80	D471
Oil immersion: Volume increase, max, percent	80	80		

NOTE: An adhesive lubricant is required for TY-SEAL and EZ-TITE gasket sizes 5-inch and larger diameters. Tyler offers LUBRI/FAST® LUBRICANT for this application.

How to Specify:

All 2-inch through 6-inch hub and spigot cast iron soil pipe and fittings shall conform to ASTM A 74; joints shall be made either by caulked lead and oakum or by compression gaskets which conform to ASTM C 564.

Description:

TY -SEAL is a one-piece compression gasket. It is used for joining hub and spigot cast iron soil pipe and fittings made according to ASTM A 74.

Gasket Material:

TY -SEAL gaskets are made of Neoprene as the sole elastomer. The physical characteristics of the Neoprene ensure that the gasket will not decay or deteriorate from contact with effluents in the pipe or chemicals in the soil or air around the pipe.

Gasket Specification:

TY -SEAL gaskets conform strictly to ASTM Standard C 564, latest issue. The TY-SEAL mill specification meets or exceeds all requirements.

Pipe Specification:

TYLER hub and spigot cast iron soil pipe and fittings comply with the latest issue of ASTM A 74, ANSI A 112.5.1 and Federal Specification WW-P-401 E.

1. Clean hub and spigot to be joined.

2. Insert gasket in the hub, lubricate inside the gasket

3. Align hub and spigot.

4. Pull or push spigot through the gasket until firmly sealed.

SUBMITTAL TY-SEAL GASKETS, HUB & SPIGOT CAST IRON SOIL PIPE & FITTINGS

Tyler Pipe/Soil Pipe Division • 11910 CR 492 • Tyler, TX 75706 • (800) 527-8478

Physical Properties of Ty-Seal Gaskets:

Physical Property	Test Method	Performance Requirements
Hardness, durometer A	ASTM D 2240	70 ± 5 points
Tensile Strength	ASTM D 412	1500 psi. minimum

Resistance to heat aging	ASTM D 573	
Change in original properties after 96 hrs. at 158° F.		
Hardness		± 10 points maximum
Elongation		-20% maximum
Tensile strength		-15% maximum
Resistance to oil aging	ASTM D 471	
Change in volume after 70 hrs. immersion in ASTM Oil No. 3 at 212° F.		80% maximum
Resistance to ozone	ASTM D 1149	
Condition after exposure to 150 pphm ozone in air for 100 hrs at 140° F. (40° C.) (sample under 20% strain)		No cracks
Resistance to permanent set	ASTM D 395	25% maximum
Compression set after 22 hrs. at 158° F.	(Method B)	
Compression set after 22 hrs. at 14° F.	ASTM D 1229	60% maximum

Joint Characteristics:

TY-SEAL gasket joints will not leak even if deflected as much as 5 degrees, or when subjected to vibration, seismic tremors, expansion, contraction, external or internal test pressure.

Quality Control:

Company laboratory tests insure that finished gaskets conform to specification.

Availability of Products:

Cast iron soil pipe and TY-SEAL gaskets are sold through recognized plumbing distribution channels.

Plumbing Codes:

National plumbing codes and government agencies now provide for gasket joints.

Documents:

Certificates and reports validating all statements contained herein will be supplied on written request.

HOW TO SPECIFY:
All 2-inch through
15-inch hub and
spigot cast iron soil
pipe and fittings
shall conform to
ASTM A 74; joints
shall be made either
by caulked lead
and oakum or by
compression gaskets
such as TY-SEAL
which conform to
ASTM C 564.

PIPE & COUPLING

SUBMITTAL TYLER® STANDARD NO-HUB COUPLINGS

Tyler Pipe/Soil Pipe Division • 11910 CR 492 • Tyler, TX 75706 • (800) 527-8478

Description:

Tyler Pipe standard no-hub couplings are manufactured in accordance with CISPI 310 and are designed to join cast-iron pipe and fittings in drain, waste and vent applications. Each coupling includes two components: a molded, one-piece neoprene sealing sleeve and a 300 series AISI stainless steel shield/ clamp assembly featuring compression bands over our trademark diamond-corrugation shield pattern. Tyler No-hub couplings are available in sizes from 1½" to 10" in diameter. 12" and 15" couplings are provided by Anaco.

Neoprene Sealing Sleeve:

Tyler Pipe standard-coupling sealing sleeves conform to ASTM standard C 564 and are made of high-purity neoprene. This material delivers superior resistance to decay and deterioration from contact with effluents in the pipe, chemicals in the soil, or air around the pipe - including oil and other petroleum products. Also, neoprene can withstand high liquid temperatures up to 212°, is fire resistant and does not support flame. Each sleeve features a double row of raised, sealing rings positioned under each compression band to provide multiple, sealing surfaces on either side of the connection. This ensures a permanent, leak-proof joint that can reliably accommodate minor, pipe-mating diameter variations.

Shield and Clamp Assembly:

Tyler® couplings incorporate a shield and clamp assembly fabricated from 300 series stainless steel for maximum corrosion resistance.

Clamping bands are mounted and attached to the shield by a fixed and

Material Specification:

Bands	300 Series AISI Stainless Steel
Screw Housing	300 Series AISI Stainless Steel 5/16" hex head slant shoulder
Shield	300 Series AISI Stainless Steel
Sealing Sleeve	Neoprene elastomer compound conforms to ASTM C 564

floating eyelet system that allows for variable adjustment of each clamp during tightening. Our shield's patented diamond-pattern corrugation design locks the sealing sleeve under the shield and prevents slippage or extrusion - even under elevated internal pressure or external stress. The clamp bands on 1½"-10" diameter couplings require 60 in-lbs of torque. 12"-15" diameter couplings require 80 in-lbs of torque.

Bracing:

Horizontal pipe and fittings 5" and larger should be suitably braced using blocks, rodding or other methods at each branch or change in direction.

Joint Characteristics:

A superior gasket joint is produced with a Tyler Pipe standard no-hub coupling. It is designed not to leak, even when subjected to vibration, seismic tremors, expansion, contraction, deflection by as much as 5 degrees, or external and internal test pressure.

Quality Control and Documentation:

Tyler Pipe's internal quality control processes include daily performance testing to verify conformance of all components to established standards. In addition, NSF periodically tests, inspects and audits Tyler Pipe's manufacturing facility. Certificates and reports validating all claims contained in this Submittal will be supplied upon written request.

Suggested Specification:

No-hub cast-iron soil pipe and fittings shall be joined with Tyler Pipe NSF-certified couplings that conform to the CISPI 310 / ASTM C1277 standard. Couplings will be installed according to the installation instructions of the manufacturer. All pipe and fittings on which couplings are installed shall bear the registered trademark  signifying they comply with the Cast Iron Soil Pipe Institute Standard 301.

PHYSICAL PROPERTIES

Property	Value	ASTM Test Method
Tensile Strength	1500 psi minimum	D 412
