

TIMKEN

TIMKEN® U SERIES BALL BEARING HOUSED UNIT CATALOG

ABOUT THE TIMKEN COMPANY

As a global leader in bearings and power transmission systems, Timken focuses on precise solution design, materials and craftsmanship to deliver reliable and efficient performance that improves productivity and uptime. Timken offers a full range of bearings, belts, chains, couplings, gears and lubricants, along with rebuild and repair services. Timken (NYSE; TKR; www.timken.com) applies its proven expertise in metallurgy, tribology and mechanical power transmission to create innovative approaches to customers' complex needs. Global availability of products and engineering talent, combined with exceptional service delivery across markets, makes Timken a preferred choice worldwide.

TIMKEN® U SERIES BALL BEARING HOUSED UNITS - DESIGNED FOR OPTIMIZED PERFORMANCE

For more than 110 years, Timken innovations continue to keep the world in motion, including the invention of the wide inner ring bearing and the ball bearing housed unit. We continue that innovation by applying our extensive engineering knowledge of bearings, metallurgy, seals and end-user applications to deliver optimized performance from our housed unit product line.

Timken ball bearing housed units help improve efficiencies through:

Increased equipment uptime and reduced maintenance cost.

- Bearings with spherical outer rings and precision-machined cast-iron housings help prevent outer-ring rotation.
- Bearings withstand static misalignment of the shaft of ± 3 degrees.
- Designed for normal operation between -20°C and 100°C (-4°F and 212°F).
- Wide inner ring ball bearings deliver greater shaft support.
- High-strength housings are suited for most industrial applications.
- Bearings are prelubricated and ready for immediate installation.
- Timken knowledge and support come standard.

Robust sealing designed for the most demanding environments.

- Highly engineered sealing provides extended bearing life and reduced lubrication leakage.
- Bonded seal design with a steel flinger adds additional bearing protection.
- Effective grease retention and reduced debris and moisture ingress improve bearing performance.

Wide range of ready-to-mount units.

- Five different housing designs plus replacement inserts are offered in metric and imperial sizes.
- Set screw locking, tapered bore for use with adapter sleeve and eccentric locking collar design allow for easy installation.
- Extensive range of sizes meets the needs of a wide range of applications.
- Interchangeable without modification in many applications.
- Local in-stock availability ensures the service levels you expect.

Timken supports your job sites with a team of service engineers available around the world. Their services help extend maintenance cycles and maximize uptime.

Timken is your single-source for friction management, with a full range of bearings and related accessories including greases, seals, tools, training and repair services.

HOW TO USE THIS CATALOG

We designed this catalog to help you find the Timken bearings best suited to your equipment needs and specifications.

The product tables list many of the bearing types that are specifically used in thrust positions. For other bearing types, please refer to the respective Timken product catalog reference.

Timken offers an extensive range of bearings and accessories in both imperial and metric sizes. For your convenience, size ranges are indicated in millimeters and inches. Contact your Timken engineer to learn more about our complete line for the special needs of your application.

This publication contains dimensions, tolerances and load ratings, as well as engineering sections describing mounting and fitting practices for shafts and housings, internal clearances, materials and other bearing features. It provides valuable assistance in the initial consideration of the type and characteristics of the bearings that may best suit your particular needs.

ISO, as used in this publication, refers to the International Organization for Standardization and JIS refers to the Japanese Industrial Standards.

Updates are made periodically to this catalog.

Visit www.timken.com/catalogs for the most recent version of the Timken® U Series Ball Bearing Housed Unit Catalog.

SHELF LIFE AND STORAGE OF GREASE-LUBRICATED BEARINGS AND COMPONENTS

To help you get the most value from our products, Timken provides guidelines for the shelf life of grease-lubricated ball and roller bearings, components and assemblies. Shelf life information is based on Timken and industry test data and experience.

SHELF LIFE

Shelf life should be distinguished from lubricated bearing/component design life as follows:

Shelf life of the grease-lubricated bearing/component represents the period of time prior to use or installation.

The shelf life is a portion of the anticipated aggregate design life. It is impossible to accurately predict design life due to variations in lubricant bleed rates, oil migration, operating conditions, installation conditions, temperature, humidity and extended storage.

TIMKEN IS NOT RESPONSIBLE FOR THE SHELF LIFE OF ANY BEARING/COMPONENT LUBRICATED BY ANOTHER PARTY.

European REACH compliance

Timken lubricants, greases and similar products sold in standalone containers or delivery systems are subject to the European REACH (Registration, Evaluation, Authorization and Restriction of Chemicals) directive. For import into the European Union, Timken can sell and provide only those lubricants and greases that are registered with ECHA (European Chemical Agency). For further information, please contact your Timken engineer.

STORAGE

Timken suggests the following storage guidelines for our finished products (bearings, components and assemblies, referred to as “products”):

- Unless directed otherwise by Timken, products should be kept in their original packaging until they are ready to be placed into service.
- Do not remove or alter any labels or stencil markings on the packaging.

- Products should be stored in such a way that the packaging is not pierced, crushed or otherwise damaged.
- After a product is removed from its packaging, it should be placed into service as soon as possible.
- When removing a product that is not individually packaged from a bulk pack container, the container should be resealed immediately after the product is removed.
- The storage area temperature should be maintained between 0° C (32° F) and 40° C (104° F); temperature fluctuations should be minimized.
- The relative humidity should be maintained below 60 percent and the surfaces should be dry.
- The storage area should be kept free from airborne contaminants such as, but not limited to, dust, dirt, harmful vapors, etc.
- The storage area should be isolated from undue vibration.
- Extreme conditions of any kind should be avoided.

Due to the fact that Timken is not familiar with your particular storage conditions, we strongly suggest following these guidelines. However, you may be required by circumstances or applicable government requirements to adhere to stricter storage requirements.

Most bearing components typically ship protected with a corrosion-preventive compound that is not a lubricant. These components may be used in oil-lubricated applications without removal of the corrosion-preventive compound. When using some specialized grease lubrications, we advise you to remove the corrosion-preventive compound before packing the bearing components with suitable grease.

Be careful in selecting lubrication, however, since different lubricants are often incompatible.

When you receive a bearing shipment, do not remove products from their packaging until they are ready for mounting so they do not become corroded or contaminated.

Store bearings and bearing housings in an appropriate atmosphere so they remain protected for the intended period.

HOUSING STYLES

Timken offers you the full range of standard and heavy series ball bearing housed units with set screw locking (UC), tapered bore for use with adapter sleeve (UK) and eccentric locking collar (UEL) mechanisms in metric and imperial sizes:

PILLOW BLOCK UNITS

UCP – 12 mm to 140 mm (½ in. to 4 in.)

UELP – 12 mm to 75 mm (½ in. to 3 in.)

UKP – 20 mm to 80 mm (¾ in. to 3 in.)

FOUR-BOLT FLANGED UNITS

UCF – 12 mm to 140 mm (½ in. to 4 in.)

UELF – 12 mm to 75 mm (½ in. to 3 in.)

UKF – 20 mm to 80 mm (¾ in. to 3 in.)

TWO-BOLT FLANGED UNITS

UCFL – 12 mm to 130 mm (½ in. to 4 in.)

UELFL – 12 mm to 75 mm (½ in. to 3 in.)

UKFL – 20 mm to 80 mm (¾ in. to 3 in.)

PILOTED ROUND FLANGED UNITS

UCFC – 12 mm to 90 mm (½ in. to 3½ in.)

UELFC – 12 mm to 75 mm (½ in. to 3 in.)

UKFC – 20 mm to 80 mm (¾ in. to 3 in.)

TAKE-UP UNITS

UCT – 12 mm to 140 mm (½ in. to 4 in.)

UEL – 12 mm to 75 mm (½ in. to 3 in.)

UKT – 20 mm to 75 mm (¾ in. to 3 in.)

WIDE INNER RING BALL BEARINGS

UC – 12 mm to 140 mm (½ in. to 4 in.)

UEL – 12 mm to 75 mm (½ in. to 3 in.)

UK – 20 mm to 80 mm (¾ in. to 3 in.)

NOMENCLATURE CONFIGURATIONS TO MEET YOUR NEEDS

BALL HOUSED UNITS

Standard and heavy series – wide inner ring, set screw, tapered bore for use with adapter sleeve and eccentric locking collar mechanisms.

HOUSING TYPES

Pillow block, two-bolt flange, four-bolt flange, piloted round flange and take-up.

METRIC BORE SIZES

12 mm – 140 mm

INCH BORE SIZES

½ in. – 4 in.

TABLE 1. MODEL LIST

Model		Bearing Bore Dia. Surface (Fixing to Shaft)	Model Code	Shaft Diameter				Dimension Table Page Number
				Min.	Max.	Min.	Max.	
				in.		mm		
	Ball bearing inserts	with set screw locking	UC	½	4.0	12	140	26, 66
		with eccentric locking collar	UEL	½	3.0	12	75	40
		tapered bore (adapter sleeve ⁽¹⁾)	UK	¾	3.0	20	80	54
	Pillow block units	with set screw locking	UCP	½	4.0	12	140	16, 58
		with eccentric locking collar	UELP	½	3.0	12	75	30
		tapered bore (adapter sleeve ⁽¹⁾)	UKP	¾	3.0	20	80	44
	Four-bolt flange units	with set screw locking	UCF	½	4.0	12	140	18, 60
		with eccentric locking collar	UELF	½	3.0	12	75	32
		tapered bore (adapter sleeve ⁽¹⁾)	UKF	¾	3.0	20	80	46
	Two-bolt flange units	with set screw locking	UCFL	½	4.0	12	130	20, 62
		with eccentric locking collar	UELFL	½	3.0	12	75	34
		tapered bore (adapter sleeve ⁽¹⁾)	UKFL	¾	3.0	20	80	48
	Take-up units	with set screw locking	UCT	½	4.0	12	140	24, 64
		with eccentric locking collar	UELT	½	3.0	12	75	38
		tapered bore (adapter sleeve ⁽¹⁾)	UKT	¾	3.0	20	75	52
	Piloted round flanged units	with set screw locking	UCFC	½	3 ½	12	90	22
		with eccentric locking collar	UELFC	½	3.0	12	75	36
		tapered bore (adapter sleeve ⁽¹⁾)	UKFC	¾	3.0	20	80	50

⁽¹⁾ Note: Adapter sleeve of the desired size should be ordered separately.

PRODUCT INFO

Precision formed flinger

Provides the first level of protection against contamination.

High-performance seal

Bonded nitrile rubber seal with an engineered interface to the inner ring.

Hardened and ground seal land

Helps protect against abrasive wear, extending seal life.

Outer ring with spherical outside diameter

Engineered fit between bearing and housing to improve bearing life.

Lubrication delivery system

Precision-machined lubrication groove and holes in the outer ring of the bearing.

Engineered balls and cage

Steel cage provides effective ball guidance and high-temperature service capability.

Wide inner ring

Improved shaft support over narrow rings, improving bearing life and reducing misalignment.

Locking types

Three effective locking styles available:

- Set screw locking
 - Simple installation
 - Ideal for reversing applications
 - Provides maximum holding power
- Eccentric locking
 - Easy installation
 - Reliable and provides secure grip to the shaft
 - Minimize shaft damage
- Adapter sleeve locking
 - Highly concentric and secure locking
 - Eliminates shaft damage
 - Prevent fretting corrosion even under adverse conditions

Cast-iron housing

Incorporates ISO 185 Grade 200 (ASTM A48 Grade No. 30) cast iron.

Premium grease

Prelubricated with high-quality lithium-based grease, compatible with most industrial greases.

INSTALLATION

UC 200 AND UC 300 SERIES

SET SCREW STYLE UNITS

Set screw style units are mounted on the shaft with the help of two set screws in the inner ring located at 120 degrees to each other. The set screw locking mechanism provides ease in mounting and is suitable for applications where the shaft rotation is bidirectional.

Installation procedures for set screw style units are shown below.

1. Ensure that the shaft is clean, free from burrs, straight and of proper diameter. The bearing should not be mounted on a worn section of the shaft. Using shafts with hardness greater than HRC 45 will reduce effectiveness of locking devices. See table 3 on page 12 for suggested shaft tolerances.
2. Install the supplied grease fitting into the threaded lubrication hole on the housing. Align the bearing in its housing and slide the unit into position on the shaft.

3. Bolt the housing tightly to its mounting supports using an appropriately sized fastener and suggested bolt torque (table 5 on page 12). Flat washers should be used when installing any kind of housed unit. Washers should be properly sized to bolt diameter.

4. Lock the bearing to the shaft by tightening each inner ring set screw incrementally to suggested torque levels (table 4 on page 12).

UK SERIES

ADAPTER STYLE UNITS

Adapter style units have a tapered bore bearing mounted to the shaft with adapter sleeve assembly, comprised of an adapter sleeve, locknut and lockwasher. This design offers the best shaft concentricity and highest capacity while having the ability to accommodate undersized shafting. These units are most suitable where they are exposed to excessive vibration and impact.

Installation procedures for adapter style units are shown below.

1. Ensure that the shaft is clean, free from burrs, straight and of proper diameter. The bearing should not be mounted on a worn section of the shaft. See table 6 on page 13 for suggested shaft tolerances.
2. Slide the adapter sleeve into position on the shaft. If the sleeve is too tight, expand the slot by using a screwdriver as required.
3. Slide the bearing unit over the adapter sleeve and loosely install the housed unit to its mounting supports using an appropriately sized fastener. Flat washers should be used when installing any kind of housed unit. Washers should be properly sized to bolt diameter.
4. Assemble the lockwasher on the sleeve and thread the locknut onto the adapter sleeve leaving approximately 6.35 mm (¼ in.) between the lockwasher and the inner ring of the bearing.
5. Use a large screwdriver or pry bar to lever the sleeve into position until there is no relative movement between the shaft, adapter sleeve and the bearing's inner ring.
6. Rotate the locknut until hand-tight. Use a spanner wrench to tighten the locknut to the suggested torque (see table 7 on page 13).

7. Bend a tang on the lockwasher into a slot on the locknut to prevent the locknut from loosening.

8. Rotate the shaft by hand while tightening the mounting bolts to make sure the shaft rotates freely. Tighten the housed unit mounting bolts to the recommended bolt tightening torque given in table 5 on page 12.

UEL SERIES

ECCENTRIC LOCKING COLLAR UNITS

The self-locking collar eliminates the need for locknuts, lockwashers, shoulders, sleeves and adapters. For many agricultural and industrial applications, self-locking collars are the easiest housed units to install. The locking collar has a recessed cam made eccentric to the collar bore. When assembled on the shaft, the locking collar engages or mates with the eccentric cam end of a bearing's inner ring. This assembly grips the shaft tightly with a positive binding action that increases with use. No adjustments of any kind are necessary. The collar set screw provides supplementary locking.

Installation procedures for eccentric locking collar style units are shown below.

1. Ensure that the shaft is clean, free from burrs, straight and of proper diameter. The bearing should not be mounted on a worn section of the shaft. Using shafts with hardness greater than HRC 45 will reduce effectiveness of locking devices. See table 3 on page 12 for suggested shaft tolerances.
2. Install the supplied grease fitting into the threaded lubrication hole on the housing. Align the bearing in its housing and slide the unit into position on the shaft.

3. Bolt the housing tightly to its mounting supports using an appropriately sized fastener and suggested bolt torque (table 5 on page 12). Flat washers should be used when installing any kind of housed unit. Washers should be properly sized to bolt diameter.

4. Place the eccentric locking collar on the shaft with its cam adjacent to the cam on the end of the bearing inner ring. The eccentric collar's recessed cam will engage the corresponding cam on the bearing inner ring. Turn the collar in the direction of shaft rotation.

5. Using a light weight hammer and a drift pin inserted in the blind hole, tap lightly in the direction of shaft rotation to positively engage the collar. The insert is now locked to the shaft.

6. Tighten the set screw to suggested torque level (see table 4 on page 12).

RELUBRICATION

Timken ball bearing housed units are prelubricated. However, periodic relubrication is advisable in some applications for which these units are designed. Consult your equipment manufacturer's operating manual for the specific relubrication cycle. General guidelines are found in table 2 below.

TABLE 2. GENERAL RELUBRICATION SUGGESTIONS FOR GREASED BEARINGS ⁽¹⁾

Condition	Relubrication Interval
Indoor service	Not required
Outdoor service	Two/three times per year
Severe outdoor exposure	Once a month
High contamination/washdown	Once a week

⁽¹⁾ As a guideline, relubricate until the first indication of grease is observed purging from the bearing.

TECHNICAL DATA

The following tables provide useful installation details related to shaft tolerance, recommended torque for set screws and mounting bolts, bearing internal clearances and the speed ratings.

TABLE 3. SUGGESTED SHAFT TOLERANCE ⁽¹⁾

Shaft Size		Shaft Tolerance	
Over	Incl.	Min.	Max.
mm in.	mm in.	mm in.	mm in.
12 0.500	18 0.625	0 0.000	– 0.011 – 0.0004
19 0.750	30 1.000	0 0.000	– 0.013 – 0.0005
31 1.125	50 1.938	0 0.000	– 0.016 – 0.0006
51 2.000	80 3.125	0 0.000	– 0.019 – 0.0007
81 3.250	120 3.500	0 0.000	– 0.022 – 0.0009
120 3.50	140 4.00	0 0.000	– 0.025 – 0.0010

⁽¹⁾ These are for normal service; for heavy loads, high speeds or vertical shaft applications, consult your equipment manufacturer or your local Timken representative.

For shaft tolerance of taper sleeve inserts, see table 6 on page 13.

TABLE 4. SUGGESTED SET SCREW TIGHTENING TORQUE

Set Screw Size	Tightening Torque	Applicable Bore Ranges		
		UC 200 Series	UEL 200 Series	UC 300 Series
mm in.	N-m in.-lbs.

¼ – 28 UNF	35	201 - 206	–	–
M8 x 1	9	207 - 209	206 - 210	307
⅝ – 24 UNF	75	207 - 209	–	–
M10 x 1.25	18	210 - 212	211 - 212	308 - 309
¾ – 24 UNF	155	210 - 212	–	–
M12 x 1.5	28	213 - 218	–	310 - 314
⅞ – 20 UNF	248	–	–	–
M14 x 1.5	35	–	–	315 - 316
1½ – 20 UNF	248	213 - 218	–	–
M16 x 1.5	56	–	–	317 - 319
⅞ – 18 UNF	496	–	–	–
M18 x 1.5	62	–	–	320 - 324
¾ – 16 UNF	549	–	–	–
M20 x 1.5	83	–	–	326 - 328
–	–	–	–	–

For tightening torques of adapter locknuts, see table 7 on page 13.

TABLE 5. SUGGESTED MOUNTING BOLT TORQUE

Bolt Size	Tightening Torque	Bolt Size	Tightening Torque
mm	N-m	in.	ft.-lbs.
M10	12 – 21	⅜	9 – 16
M12	21 – 37	7/16	16 – 27
M14	34 – 60	½	26 – 44
M16	53 – 93	⅝	39 – 69
M20	104 – 186	¾	77 – 137
M22	143 – 256	⅞	106 – 190
M27	266 – 478	1	196 – 353
M30	360 – 645	1 ⅛	265 – 476
M33	494 – 885	1 ¼	364 – 653
M36	631 – 1130	1 ⅜	465 – 833
M39	740 – 1320	1 ½	521 – 974
M42	858 – 1533	1 ⅝	609 – 1131

Since tapered bore bearings are fixed to the shaft with an adapter, a looser fit is allowable since the adapter sleeve provides excellent concentricity. This makes mounting of the bearing to the shaft much easier.

Table 6 on page 13 shows the dimensional tolerance of the shaft used with tapered bore bearings (with adapters).

TABLE 6. DIMENSIONAL TOLERANCE OF SHAFT USED FOR TAPERED BORE BEARINGS (WITH ADAPTERS)

Shaft Dia.		Dimensional Tolerance of Shaft			
		h8		h9	
Over	Incl.	Min.	Max.	Min.	Max.

	148	221	332

RADIAL INTERNAL CLEARANCE

In the manufacture of ball bearings, it is standard practice to assemble rings and rolling elements with a specified internal clearance. This characteristic is necessary to absorb the loss of clearance due to press fitting the bearing rings at mounting or due to expansion of bearings, shafts and housings. Internal clearance in an application is an important factor that has a significant influence on bearing performance as well as characteristics of heat, noise and vibration.

Table 8 shows the applicable internal clearance for different series bearings and Table 9 shows the available options for internal clearance.

TABLE 8. INTERNAL CLEARANCES - DIFFERENT SERIES

Bearing Bore	Internal Clearance
Cylindrical (UC, UEL)	CN
Tapered (UK)	C3

TABLE 9. INTERNAL CLEARANCE

Nominal Bearing Bore Dia. d		Radial Internal Clearance			
		CN		C3	
Over	Incl.	Min.	Max.	Min.	Max.
µm					
10	18	3	18	11	25
18	24	5	20	13	28
24	30	5	20	13	28
30	40	6	20	15	33
40	50	6	23	18	36
50	65	8	28	23	43
65	80	10	30	25	51
80	100	12	36	30	58
100	120	15	41	36	66
120	140	18	48	41	81

Remarks

1. Radial internal clearance given in the above table comply with JIS B 1558.
2. Increase in the internal clearance caused due to the applied measured load is given in the Table 10 below. The correction is applicable to the maximum clearance.

TABLE 10. CORRECTION OF CLEARANCE

Nominal Bearing Bore Dia. d		Measured Load	Correction of Clearance	
			CN	C3
Over	Incl.			
mm		N	µm	
2.5	18	24.5	4	4
18	50	49	5	6
50	280	147	8	9

SPEED RATINGS

There's no precise method for determining the maximum speed at which a ball bearing can operate. Bearing characteristics and features of surrounding parts, shafts, housings and other components, as well as basic service conditions, are all variables which are dependent upon each other for continued satisfactory high-speed performance.

The safe operating speed of a bearing is often limited by the temperature within the bearing, which in turn, dependent upon the temperature surrounding the application, accuracy of the bearing, shafts, housings, auxiliary parts, etc., and the type and amount of lubricant. Radial bearings with proper internal refinements will operate at high speeds for longer periods if properly installed and lubricated.

Below table shows the standard allowable rotating speeds of ball bearing units.

TABLE 11. ALLOWABLE ROTATING SPEED FOR HOUSED UNITS

Bore Dia. Code	Diameter Series	
	2	3
	RPM	
01	5800	-
02	5800	-
03	5800	-
04	5800	-

Remarks:

When a bearing unit is used with excessively loose fit, the allowable rotating speed must be calculated by multiplying it by the fitting factor f_c shown in the below table.

TABLE 12. FITTING FACTOR f_c FOR HOUSED UNITS

Type of Ball Bearing Units	Fitting Factor f_c					
	Shaft Tolerance Range Class

UC 200 INDUSTRIAL SET SCREW LOCKING SERIES

The following topics are covered within this section:

UCP 200 Pillow Block Housed Units	16
UCF 200 Four-Bolt Flanged Housed Units	18
UCFL 200 Two-Bolt Flanged Housed Units	20
UCFC 200 Piloted Round Flanged Housed Units	22
UCT 200 Take-Up Housed Units	24
UC 200 Wide Inner Ring Ball Bearings	26

UCP 200 INDUSTRIAL SET SCREW LOCKING SERIES CAST-IRON PILLOW BLOCK HOUSED UNITS

- UCP pillow blocks are suggested for industrial applications where normal loads are encountered.
- Compact, one-piece housing with two-bolt mounting can be installed in any position and makes bearing replacement easy.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UCP series housed units feature the Timken set screw locking (UC) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing and base-to-center height dimensions are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UCF 200 INDUSTRIAL SET SCREW LOCKING SERIES CAST-IRON FOUR-BOLT FLANGED HOUSED UNITS

- UCF four-bolt flanged units are suggested for industrial applications where normal loads are encountered.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UCF series housed units feature the Timken set screw locking (UC) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UCFL 200 INDUSTRIAL SET SCREW LOCKING SERIES CAST-IRON TWO-BOLT FLANGED HOUSED UNITS

- UCFL two-bolt flanged units are suggested for industrial applications where normal loads are encountered.
- This series is primarily designed for applications where the mounting area is restricted.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UCFL series housed units feature the Timken set screw locking (UC) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UCFC 200 INDUSTRIAL SET SCREW LOCKING SERIES CAST-IRON PILOTED ROUND FLANGED HOUSED UNITS

- UCFC piloted flanged units are suggested for industrial applications where normal loads are encountered.
- UCFC piloted round flanged units ensure accurate mounting fits and provide better support for heavy loads.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UCFC series housed units feature the Timken set screw locking (UC) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for industrial applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UCT 200 INDUSTRIAL SET SCREW LOCKING SERIES CAST-IRON TAKE-UP HOUSED UNITS

- UCT take-up units are suggested for industrial applications where normal loads are encountered.
- UCT take-up units are used where shaft adjustment and belt-tightening devices are required, such as in conveyor applications.
- These units provide compact, efficient supports for adjustable shafts and conveyor take-up pulleys.
- Each unit comes assembled and ready for mounting.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UCT series housed units feature the Timken set screw locking (UC) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for industrial applications involving wet or dirty environments.
- Slot spacing and width are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UC 200 INDUSTRIAL SET SCREW LOCKING SERIES WIDE INNER RING BALL BEARINGS

- The UC wide inner ring ball bearing uses a popular set screw locking mechanism and is suggested for industrial applications where normal loads are encountered.
- The set screw mounting feature is ideal for reversing load applications.
- Bearing prelubricated and ready for immediate installation.
- The wide inner ring provides effective shaft support for a broad range of industrial applications.
- The positive contact of the land-riding bonded nitrile seal helps protect against harmful contaminants and retains lubricant under severe operating conditions.
- An external steel flinger provides additional protection from contamination.
- The UC series features superfinished raceways, grade-10 balls for smooth running and low noise operation.
- UC series wide inner ring ball bearings have spherical outside diameters for use in housings with corresponding spherical inside surfaces to compensate for shaft misalignment.

UEL 200 INDUSTRIAL ECCENTRIC LOCKING COLLAR SERIES

The following topics are covered within this section:

UEL 200 Pillow Block Housed Units	30
UELF 200 Four-Bolt Flanged Housed Units	32
UELFL 200 Two-Bolt Flanged Housed Units	34
UELFC 200 Piloted Round Flanged Housed Units	36
UELT 200 Take-Up Housed Units	38
UEL 200 Wide Inner Ring Ball Bearings	40

UELP 200 INDUSTRIAL ECCENTRIC LOCKING COLLAR SERIES CAST-IRON PILLOW BLOCK HOUSED UNITS

- UELP pillow blocks are suggested for industrial applications where normal loads are encountered.
- Compact, one-piece housing with two-bolt mounting can be installed in any position and makes bearing replacement easy.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UELP series housed units feature the Timken eccentric locking collar (UEL) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing and base-to-center height dimensions are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UELF 200 INDUSTRIAL ECCENTRIC LOCKING COLLAR SERIES CAST-IRON FOUR-BOLT FLANGED HOUSED UNITS

- UELF four-bolt flanged units are suggested for industrial applications where normal loads are encountered.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UELF series housed units feature the Timken eccentric locking collar (UEL) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UELFL 200 INDUSTRIAL ECCENTRIC LOCKING COLLAR SERIES CAST-IRON TWO-BOLT FLANGED HOUSED UNITS

- UELFL two-bolt flanged units are suggested for industrial applications where normal loads are encountered.
- This series is primarily designed for applications where the mounting area is restricted.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UELFL series housed units feature the Timken eccentric locking collar (UEL) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UELFC 200 INDUSTRIAL ECCENTRIC LOCKING COLLAR SERIES CAST-IRON PILOTED ROUND FLANGED HOUSED UNITS

- UELFC piloted round flanged units are suggested for industrial applications where normal loads are encountered.
- UELFC piloted round flanged units ensure accurate mounting fits and provide better support for heavy loads.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UELFC series housed units feature the Timken eccentric locking collar (UEL) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for industrial applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UEL200 INDUSTRIAL ECCENTRIC LOCKING COLLAR SERIES CAST-IRON TAKE-UP HOUSED UNITS

- UELT take-up units are suggested for industrial applications where normal loads are encountered.
- UELT take-up units are used where shaft adjustment and belt-tightening devices are required, such as in conveyor applications.
- These units provide compact, efficient supports for adjustable shafts and conveyor take-up pulleys.
- Each unit comes assembled and ready for mounting.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UELT series housed units feature the Timken eccentric locking collar (UEL) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for industrial applications involving wet or dirty environments.
- Slot spacing and width are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UEL 200 INDUSTRIAL ECCENTRIC LOCKING COLLAR SERIES WIDE INNER RING BALL BEARINGS

- The UEL wide inner ring ball bearing uses an eccentric locking collar mechanism and is suggested for industrial applications where normal loads are encountered.
- The eccentric locking feature is ideal for non-reversing load applications.
- Bearing prelubricated and ready for immediate installation.
- The wide inner ring provides effective shaft support for a broad range of industrial applications.
- The positive contact of the land-riding bonded nitrile seal helps protect against harmful contaminants and retains lubricant under severe operating conditions.
- An external steel flinger provides additional protection from contamination.
- The UEL series features superfinished raceways, grade-10 balls for smooth running and low noise operation.
- UEL series wide inner ring ball bearings have spherical outside diameters for use in housings with corresponding spherical inside surfaces to compensate for shaft misalignment.

UK 200 INDUSTRIAL TAPERED BORE FOR USE WITH ADAPTER SLEEVE LOCKING SERIES

The following topics are covered within this section:

UKP 200 Pillow Block Housed Units	44
UKF 200 Four-Bolt Flanged Housed Units	46
UKFL 200 Two-Bolt Flanged Housed Units	48
UKFC 200 Piloted Round Flanged Housed Units	50
UKT 200 Take-Up Housed Units	52
UK 200 Wide Inner Ring Ball Bearings	54

UKP 200 INDUSTRIAL TAPERED BORE FOR USE WITH ADAPTER SLEEVE LOCKING SERIES CAST-IRON PILLOW BLOCK HOUSED UNITS

- UKP pillow blocks are suggested for industrial applications where normal loads are encountered.
- Compact, one-piece housing with two-bolt mounting can be installed in any position and makes bearing replacement easy.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UKP series housed units feature the Timken tapered bore (UK) bearing insert for use with adapter sleeve.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing and base-to-center height dimensions are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UKF 200 INDUSTRIAL TAPERED BORE FOR USE WITH ADAPTER SLEEVE LOCKING SERIES CAST-IRON FOUR-BOLT FLANGED HOUSED UNITS

- UKF four-bolt flanged units are suggested for industrial applications where normal loads are encountered.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UKF series housed units feature the Timken tapered bore (UK) bearing insert for use with adapter sleeve.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UKFL 200 INDUSTRIAL TAPERED BORE FOR USE WITH ADAPTER SLEEVE LOCKING SERIES CAST-IRON TWO-BOLT FLANGED HOUSED UNITS

- UKFL two-bolt flanged units are suggested for industrial applications where normal loads are encountered.
- This series is primarily designed for applications where the mounting area is restricted.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UKFL series housed units feature the Timken tapered bore (UK) bearing insert for use with adapter sleeve.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UKFC 200 INDUSTRIAL TAPERED BORE FOR USE WITH ADAPTER SLEEVE LOCKING SERIES CAST-IRON PILOTED ROUND FLANGED HOUSED UNITS

- UKFC piloted round flanged units are suggested for industrial applications where normal loads are encountered.
- UKFC piloted round flanged units ensure accurate mounting fits and provide better support for heavy loads.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UKFC series housed units feature the Timken tapered bore (UK) bearing insert for use with adapter sleeve.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for industrial applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UKT 200 INDUSTRIAL TAPERED BORE FOR USE WITH ADAPTER SLEEVE LOCKING SERIES CAST-IRON TAKE-UP HOUSED UNITS

- UKT take-up units are suggested for industrial applications where normal loads are encountered.
- UKT take-up units are used where shaft adjustment and belt-tightening devices are required, such as in conveyor applications.
- These units provide compact, efficient supports for adjustable shafts and conveyor take-up pulleys.
- Each unit comes assembled and ready for mounting.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UKT series housed units feature the Timken tapered bore (UK) bearing insert for use with adapter sleeve.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for industrial applications involving wet or dirty environments.
- Slot spacing and width are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UK 200 INDUSTRIAL TAPERED BORE FOR USE WITH ADAPTER SLEEVE LOCKING SERIES WIDE INNER RING BALL BEARINGS

- The UK tapered bore wide inner ring ball bearing uses an adapter sleeve locking mechanism and is suggested for industrial applications where normal loads are encountered⁽¹⁾.
- The adapter locking feature is used in applications where the bearings are exposed to excessive vibration and impact.
- Adapter locking results in high concentricity.
- Adapter locking prevents fretting corrosion under adverse conditions.
- Bearing prelubricated and ready for immediate installation.
- The wide inner ring provides effective shaft support for a broad range of industrial applications.
- The positive contact of the land-riding bonded nitrile seal helps protect against harmful contaminants and retains lubricant under severe operating conditions.
- An external steel flinger provides additional protection from contamination.
- The UK series features superfinished raceways, grade-10 balls for smooth running and low noise operation.
- UK series wide inner ring ball bearings have spherical outside diameters for use in housings with corresponding spherical inside surfaces to compensate for shaft misalignment.

UC 300 HEAVY-DUTY SET SCREW LOCKING SERIES

The following topics are covered within this section:

UCP 300 Pillow Block Housed Units	58
UCF 300 Four-Bolt Flanged Housed Units	60
UCFL 300 Two-Bolt Flanged Housed Units	62
UCT 300 Take-Up Housed Units	64
UC 300 Wide Inner Ring Ball Bearings	66

UCP 300 HEAVY-DUTY SET SCREW LOCKING SERIES CAST-IRON PILLOW BLOCK HOUSED UNITS

- UCP pillow blocks are suggested for industrial applications where heavy loads are encountered.
- Compact, one-piece housing with two-bolt mounting can be installed in any position and makes bearing replacement easy.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UCP series housed units feature the Timken set screw locking (UC) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing and base-to-center height dimensions are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UCF 300 HEAVY-DUTY SET SCREW LOCKING SERIES CAST-IRON FOUR-BOLT FLANGED HOUSED UNITS

- UCF four-bolt flanged units are suggested for industrial applications where heavy loads are encountered.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UCF series housed units feature the Timken set screw locking (UC) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UCFL 300 HEAVY-DUTY SET SCREW LOCKING SERIES CAST-IRON TWO-BOLT FLANGED HOUSED UNITS

- UCFL two-bolt flanged units are suggested for industrial applications where heavy loads are encountered.
- This series is primarily designed for applications where the mounting area is restricted.
- Each unit comes assembled and ready for mounting, using bolts through the flange.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UCFL series housed units feature the Timken set screw locking (UC) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for applications involving wet or dirty environments.
- Bolt-hole spacing dimensions and shaft center location are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UCT 300 HEAVY-DUTY SET SCREW LOCKING SERIES CAST-IRON TAKE-UP HOUSED UNITS

- UCT take-up units are suggested for industrial applications where heavy loads are encountered.
- UCT take-up units are used where shaft adjustment and belt-tightening devices are required, such as in conveyor applications.
- These units provide compact, efficient supports for adjustable shafts and conveyor take-up pulleys.
- Each unit comes assembled and ready for mounting.
- These units use wide inner ring ball bearings with self-aligning spherical outside diameters that compensate for shaft misalignment.
- Timken UCT series housed units feature the Timken set screw locking (UC) bearing insert.
- Bearing prelubricated and ready for immediate installation.
- Grease fitting supplied for relubrication⁽¹⁾.
- The bonded seal design is well-suited for industrial applications involving wet or dirty environments.
- Slot spacing and width are interchangeable with competitive units.
- Housing designed for ease of bearing replacement.

UC 300 HEAVY-DUTY SET SCREW LOCKING SERIES WIDE INNER RING BALL BEARINGS

- The UC wide inner ring ball bearing uses a popular set screw locking mechanism and is suggested for industrial applications where heavy loads are encountered.
- The set screw mounting feature is ideal for reversing load applications.
- Bearing prelubricated and ready for immediate installation.
- The wide inner ring provides effective shaft support for a broad range of industrial applications.
- The positive contact of the land-riding bonded nitrile seal helps protect against harmful contaminants and retains lubricant under severe operating conditions.
- An external steel flinger provides additional protection from contamination.
- The UC series features superfinished raceways, grade-10 balls for smooth running and low noise operation.
- UC series wide inner ring ball bearings have spherical outside diameters for use in housings with corresponding spherical inside surfaces to compensate for shaft misalignment.

**WARNING**

Failure to observe the following warnings could create a risk of death or serious injury.

Proper maintenance and handling practices are critical. Always follow installation instructions and maintain proper lubrication.

Overheated bearings can ignite explosive atmospheres. Special care must be taken to properly select, install, maintain and lubricate housed unit bearings that are used in or near atmospheres that may contain explosive levels of combustible gases or accumulations of dust such as grain, coal, or other combustible materials. Consult your equipment designer or supplier for installation and maintenance instructions.

If hammer and bar are used for installation or removal of a part, use a mild steel bar (e.g., 1010 or 1020 grade). Mild steel bars are less likely to cause release of high speed fragments from the hammer or bar or the part being installed or removed.

CAUTION

Failure to follow these cautions may result in property damage.

Do not use damaged housed units.

NOTE:

Do not use excessive force when mounting or dismounting the unit.

Follow all tolerance, fit and torque recommendations.

Always follow the Original Equipment Manufacturer's installation and maintenance guidelines.

Ensure proper alignment.

Never weld housed units.

Do not heat components with an open flame.

Do not operate at bearing temperatures above 250° F (121° C).

TIMKEN

The Timken team applies their know-how to improve the reliability and performance of machinery in diverse markets worldwide. The company designs, makes and markets high-performance mechanical components, including bearings, belts, brakes, clutches, chain, couplings, gears and related mechanical power transmission products and services.
