Dichtomatik Nitrile U-Cups are designed to fit in most U-Cup seal glands. They are manufactured in 70, 80, and 90 durometer Nitrile depending on the profile. The profiles are rated for dynamic applications with a rod speed of 1.5 ft/s (0.5 m/s). The pressure ratings can be increased with the use of a Back-Up Ring.

Dichtomatik Nitrile U-Cups

ADVANTAGES

- Low Friction Performance in Rod or Piston Applications Assures Easy Movement without Excessive Drag
- Ideal for Pneumatic and Low-Pressure Hydraulic Cylinders
- Easy Assembly: Stretches or Snaps into Place Resulting in Lower Assembly Costs

Materials

Abbreviation Full Material Name NBR (Standard Material) Acrylonitrile-Butadine Rubber (Nitrile)		Advantages Nitrile is suitable for temperatures between -40°F and 212°F (-40°C to 100°C)				
HNBR*	Hydrogenated Nitrile (HNBR)	HNBR has high tensile properties, low compression set, good low temperature properties, heat resistance, excellent ozone resistance, good resistance to aggressive oils, resistance to crude oil in the presence of hydrogen sulfide and amines, and resistance to alkaline and oxidizing media. HNBR is primarily used in oil field applications. HNBR has a temperature range of -40°F to 300°F (-40°C to 149°C).				
XNBR*	Carboxylated Nitrile (XNBR)	XNBR is harder and tougher than standard nitriles. It also has higher abrasion resistance, modulus, and tensile strength than standard nitriles. XNBR is suitable for temperatures ranging between -40°F and 212°F (-40°C to 100°C).
