The length shall be measured by placing the belts on two sheeves	RIDE	Hi-Power II	· B Power	Band		
The length shall be measured by placing the belts on two sheaves of equal diameters that have been grooved in accordance with standard specifications and rotated at least three complete turns with the specified tension so that each strand receives half the total tension. The length will be that length obtained by adding the Reference Circumference of one sheave at dimension 'W' to twice the center distance (dimension 'Y').				Customer Part Number 3/B57
