	Created for Hi-Power II - B PowerBand							
The length shall be measured by placing the belts on two sheaves of equal diameters that h grooved in accordance with standard specifications and rotated at least three complete turn specified tension so that each strand receives half the total tension. The length will be that obtained by adding the Reference Circumference of one sheave at dimension 'W' to twice the distance (dimension 'Y').	have been ns with the t length the center	Gates Prod 9093-			Cust	tomer Pa 3/B1		ber
