# FITTING CHOICE

For more than 40 years, Kraloy has been a pioneer in the field of PVC conduit fittings. As the first UL approved manufacturer of PVC fittings, Kraloy's rich history allows us to be an industry leader today. At Kraloy we are committed to providing the highest quality products, technical support, and outstanding service. Kraloy continually offers the most up-to-date products meeting the ever changing needs of our customers.

This catalog has been prepared to provide electrical wholesalers, contractors, engineers, specifiers and utilities with the most current technical journal on Kraloy electrical systems. Only when you specify Kraloy by name are you guaranteed "The Fitting Choice".

# ELECTRICAL EASY SPEC

PRODUCT	SIZE RANGE	STANDARDS	APPLICATIONS
RIGID PVC FITTINGS			
Kraloy® Rigid PVC Fittings	1/2" - 8"	CSA C22.2 No. 85, UL Listed, UL514B - UL514C, NEMA TC3	Utilities, cable, communications, residential, airports, subways, bridges & tunnels, mines, marinas, water/ sewage treatment plants, pulp & paper industries, street & highway lighting, food processing plants, agricultural, parking garages, car washes, fish plants,steel mills
JUNCTION BOXES			
Kraloy®JBox™	4" - 16"	CSA C22.2 No. 40, No. 85, NEMA 1,2,3R,4,4X,6*,6P*,12,13 *Applies only to 4" to 12" non-hinged covers	Corrosive environments, waste-water treatment facilities, marine & car washes, agricultural, wash-down
Kraloy®JBox™ with hinged covers	8" - 16"	CSA C22.2 No. 40, No. 85, NEMA 1,2,3R,4,4X,12,13	
INTERLOCKING SPACERS			
Vertical-Lok Spacers	2" - 8"	CSA C22.2 No. 227.1, No. 85, NEMA TC-13, UL 514B, UL 514C, UL 1653	Residential and commercial (low or high rise), institutional (prisons, schools,universities), hospitals & nursing homes, stadiums & arenas
CONDUIT REPAIR KITS			
EPR® Repair Kit	1-1/4" - 6"	Material Standard, ASTM	DB II duct repair, rigid PVC repair, concrete encased, direct burial, EB & DB Sch. 40/80 and HDPE
NONMETALLIC TUBING & FITTINGS			
Kwikon® ENT & Fittings	1/2" - 2-1/2"	CSA C22.2 No. 227.1, NEMA TC-13, UL 514B, 514C, 1653, 91NK 13191 E122659 Fire Test Report, Fire Tests – ULC – City of L.A.	Residential, commercial, institutional, hospitals & nursing homes, stadiums & arenas
PVC RACEWAY FOR HORIZONTAL DIRECTIONAL DRILLING			
Sceptacon™ PVC for HDD	2" - 6"	CSA C22.2 No. 211.0/211.2, UL 651, NEMA TC2	Environmentally sensitive areas, historical landmarks, road & highway crossings, urban areas, street lights, traffic lights
NONMETALLIC LIGHT FIXTURES			
Sceptalight™	3/4" Threaded hubs, Ceiling mount, Wall mount, Pendant mount	Wet Locations: CSA C22.2 No. 250, UL 1598 Hazardous Locations: UL 844 CLASS I, DIV 2 Groups A, B, C & D, CLASS II, DIV 2 Groups F & G	Chemical plant, food processing, highway tunnels, mine tunnels, walk-in freezers, industrial/ commercial, marine, agricultural, waste water, greenhouses
NMLT CONDUIT & FITTINGS			
Kwikflex® Conduit	3/8" - 2"	CSA C22.2 No. 227.2, UL 1660	HVAC equipment, marine equipment, motors and controls, printing equipment, refrigeration equipment, transformer connections, machine tools, pumps, outdoor lighting (-5°F to 140°F / -20°C to 60°C)
Kwikflex® Fittings	3/8" - 2"	UL 514B	
SPECIALTY PRODUCTS			
INEXO® ICF Boxes	1/2", 3/4", 1"	CSA C22.2 No. 18.2, UL514C	Insulated concrete form (ICF) buildings, schools, churches, hotels

# ELECTRICAL TYPE DESIGNATION

## UL UNDERWRITERS LABORATORIES INC. (UL 50 AND UL 50E)

TYPE DESIGNATION	STANDARD
1	Indoor use primarily to provide protection against contact with the enclosed equipment and against a limited amount of falling dirt.
2	Indoor use to provide a degree of protection against limited amounts of falling water and dirt.
3	Outdoor use to provide a degree of protection against windblown rain; undamaged by the formation of ice on the enclosure.
4	Either indoor or outdoor use to provide a degree of protection against falling rain, splashing water, and hose-directed water; undamaged by the formation of ice on the enclosure.
4X	Either indoor or outdoor use to provide a degree of protection against falling rain, splashing water, and hose-directed water; undamaged by the formation of ice on the enclosure; resists corrosion.
6P	Indoor or outdoor use primarily to provide a degree of protection against hose-directed water, the entry of water during prolonged submersion at a limited depth, and be undamaged by the formation of ice on the enclosure.
12	Indoor use to provide a degree of protection against dust, dirt, fiber flyings, dripping water, and external condensation of noncorrosive liquids.
13	Indoor use to provide a degree of protection and spraying of water, oil, and noncorrosive liquids.

# Make the right choice!

Why is Kraloy the premier choice of electrical contractors?

- Performance
- Quality Products
- Committed Sales Special
- Innovation

Depend on Kraloy for quality products and superior service.

- Fast and easy installation
- Restores structural integrity
- Repair made while leaving cables inside

- Easy installation save time & money
- Complete concrete-tight system
- FT-4 rated for use in fire-rated floor or ceiling assemblies

- High tensile & impact strength
- Concrete-tight
- FT-4 rated

# KRALOY PVC ELECTRICAL FITTINGS

For more than 40 years, Kraloy has been a pioneer in the field of PVC conduit fittings. As the first UL approved manufacturer of PVC fittings, Kraloy's rich history allows us to be an industry leader today.

Kraloy offers a comprehensive offering of PVC nonmetallic conduit fittings. Kraloy conduit fitting products include adapters, couplings, elbows, access fittings, boxes, cover plates, expansion fittings and conduit spacers - virtually any fitting required to complete the PVC conduit system.

Easy installations, the ability to perform in demanding environments and labor savings are the reasons nonmetallic conduit fittings are increasingly the fitting of choice. Kraloy PVC conduit fittings offer both high impact and tensile strength, are nonconductive and are resistant to a wide range of chemicals such as acids, alkalis and salt solutions.

## APPLICATIONS

- Residential single & multi family dwellings
- Food processing plants
- Fish processing plants
- Street and highway lighting
- Sewage treatment plants
- Water treatment plants
- Bridges and tunnels
- Communications
- Pulp and paper
- Agricultural
- Airports
- Car washes
- Utilities
- Marinas
- Cable

## STANDARDS

Underwriters Laboratories

UL50 Enclosures for Electrical Equipment

UL514B Fittings for Cable & Conduit

UL514C Nonmetallic Outlet Boxes,  
Flush-Device Boxes & Covers

## ADVANTAGES

### 1 LABOR SAVINGS

Compared to yesterday's metal products, PVC reduces labor on typical installations by as much as two-thirds, because it is easy to work with. PVC does not require the labor intensive tools usually associated with steel products, such as vises, threading equipment and reamers.

### 2 EASY JOINING

All that is required to join your Kraloy fittings with PVC conduit is Kraloy Solvent Cement (see solvent cementing instructions, page 5).

### 3 STRENGTH

Kraloy PVC fittings offer both high impact and high tensile strength.

### 4 CORROSION RESISTANT

PVC is resistant to external corrosion and pitting and will not rust. This ensures a lower maintenance cost and a longer performance life.

### 5 NONCONDUCTIVE

PVC eliminates the most dangerous second point of contact in phase to ground faults. The use of a separate grounding conductor gives a complete and positive ground for the entire system.

### 6 CHEMICAL RESISTANT

Kraloy PVC fittings are resistant to a wide range of chemicals such as acids, alkalis or salt solutions. For more information on chemical resistance, contact Kraloy customer service.

### 7 AGING CHARACTERISTICS

After years of exposure to direct sunlight, heat, and extreme weather, Kraloy PVC fittings retain their original properties. They are also resistant to fungi, bacterial action, rodents and termites, providing for a long and trouble free life.

### 8 FIRE RESISTANCE

As a building material PVC offers outstanding fire performance characteristics. PVC will not burn unless an external flame source is applied, and will not sustain ignition once the flame source is removed. PVC has a flash ignition temperature of 850°F.

## SUPPORT

Due to PVC's light weight, support spacing is different than that used with metal conduits. Supporting straps should NOT be firmly tightened, to allow for linear movement. The maximum allowable support spacing, per the National Electrical Code Article 352.30 (B) is as follows:

## SUPPORT SPACING

Nominal Conduit Diameter inches	National Electrical Code Max. Support Spacing feet
1/2	2-1/2
3/4	2-1/2
1	2-1/2
1-1/4	4
1-1/2	4
2	5
2-1/2	6
3	6
3-1/2	7
4	7
5	7
6	8

## MAX OPERATING TEMPERATURE

The National Electrical Code (NEC) allows the use of rigid nonmetallic conduit (RNC) and fittings in locations where ambient temperatures are not in excess of 122°F.

## CUTTING

Kraloy Rigid PVC Conduit can be easily cut on the jobsite by using a hacksaw, carpenter's saw or PVC conduit cutters. For larger sizes of conduit, the use of a mitre box is also recommended to ensure a square cut.

## SOLVENT CEMENTING

After cutting PVC rigid conduit, sharp edges or burrs from inside the conduit should be removed with a knife. Thoroughly clean the end of the pipe and inside the fitting with a pipe cleaner. In extreme weather conditions, a primer should be used to prepare the joint for solvent cementing. Apply a generous amount of solvent cement to both surfaces, slide together and give a quarter turn to ensure solvent is spread evenly on the material. Hold together for a few seconds until the joint is made.

Usually the solvent-cemented joint will be strong enough to install immediately, but in low temperatures and high humidity, extra time may be required before moving the pipe to install it permanently. Solvent cemented joints appear to “set up” instantly, but will take 24 hours to cure properly. After this time, the solvent-cemented joint has completely cured and is waterproof. Kraloy cement is available in half-pint, pint, quarts and one-gallon containers.

## HANDLING

Solvent cements should be used as received in original containers. Adding thinners to change viscosity is not recommended. If cement is jelly-like and not free-flowing, it should not be used. Containers should be kept tightly covered when not in use.

## STORAGE CONDITIONS

Solvent cements should be stored at temperatures between 40°F and 110°F away from heat or open flame. Cements should be used before the expiry date stamped on the container. If new cement is subjected to freezing temperatures, it may become extremely thick. This cement can be placed in a warm area where it will soon return to its original, usable condition. However, if the product is gelled or hardened due to actual solvent loss (when a container is left open too long during use or not sealed properly after use), the cement will not return to its original condition. Cement in this condition has lost its formulation and should be discarded in an environmentally friendly manner.

## SAFETY PRECAUTIONS

Solvent cements are extremely flammable and should not be used or stored near heat or open flame. In confined or partially enclosed areas, a ventilating device should be used to remove vapors and minimize inhalation. Containers should be kept tightly closed when not in use, and covered as much as possible when in use. Avoid frequent contact with the skin. In case of eye contact, flush repeatedly with water. Keep out of the reach of children.

## COLD WEATHER

Although normal installation temperatures are between 40°F to 110°F, high strength joints have been made at temperatures as low as -15°F. However, the installer must ensure he has adequately softened the joining surfaces with a primer. In addition, cement must be kept warm to prevent excessive thickening and gelation in cold weather.

#### INITIAL SET SCHEDULE FOR PVC SOLVENT CEMENTS\*

Temp. Range	Pipe Size 1/2" - 1-1/4"	Pipe Size 1-1/2" - 2"	Pipe Size 2-1/2" - 6"
60° - 100°F	2 min.	3 min.	30 min.
40° - 60°F	5 min.	8 min.	2 hrs.
0° - 40°F	10 min.	15 min.	12 hrs.

NOTE: Initial set schedule is the necessary time to allow before the joint can be carefully handled.

\*These figures are estimates based on our laboratory tests. Due to the many variables in the field, these figures should be used as a general guide only.

After initial set, the joints will withstand the stresses of a normal installation. (A misaligned installation will cause excessive stresses in the joint). For long runs of pipe, care should be taken not to disturb joints for 1/2 to 1 1/2 hours before handling or burying.

#### AVERAGE NUMBER OF JOINTS PER PINT OR QUART OF CEMENT

Nominal Pipe Size Inches	# of Joints per Pint	# of Joints per Quart	Nominal Pipe Size Inches	# of Joints per Pint	# of Joints per Quart
1/2	350	700	2-1/2	40	80
3/4	200	400	3	35	70
1	150	300	3-1/2	30	60
1-1/4	110	220	4	24	48
1-1/2	80	160	5	10	20
2	45	90	6	8	16

## BENDING

PVC is a thermoplastic material that, when heated, becomes soft and pliable. As a result, its shape can be altered.

A flameless heat source is recommended to heat the pipe. AN OPEN FLAME SHOULD NOT BE USED. An electric unit or an infra-red propane unit is recommended for heating the pipe.

The necessary temperature for bending Scepter Rigid PVC pipe is 260°F. The pipe must be heated evenly over an area approximately ten times the diameter of the pipe before any attempt at bending is made. Bending the pipe when it has not been thoroughly heated will cause the pipe to "kink." With proper care and a little practice, the bend will form easily.

Cooling the pipe with cold air or water will cause "spring back." Allow a few extra degrees of overbending to compensate for this phenomenon. The maximum bending radius shall be six times the internal diameter according to the National Electrical Code.

## EXPANSION / CONTRACTION

All conduit pipe and fittings expand and contract with changes in temperature. All materials' expansion and contraction rates are represented by coefficients of thermal expansion.

A general rule of thumb is that for every 100°F temperature change in a 100 ft. run of PVC conduit, the conduit will undergo 3.6" of expansion or contraction.

### Use of Expansion Joints

In installations where the expected temperature variation exceeds 25°F expansion joints must be used. An expansion joint consists of two tubes, one telescoping inside another. When installing expansion joints alignment of the piston and barrel is important. Straps should be placed approximately one foot on either side of the joint to ensure that any movement is directed squarely into the joint.

When expansion joints are required the following steps should be followed:

#### 1. Determine number of joints required:

Use the following formula to calculate the total expected expansion in the run.

$$\text{Total expansion} = \frac{\text{Total temp. change } ^\circ\text{F}}{10} \times \frac{\text{Length of run ft.}}{100} \times .36$$

The expansion joints should then be installed at even intervals throughout the run.

$$\text{Number of joints} = \frac{\text{Total expansion}}{4}$$

#### Example:

Assume a 200 ft. run of conduit is to be installed in an unheated building where the temperature will vary from 10°F in the winter to 110°F in the summer. The installation will be carried out when the temperature is 60°F.

Using step 1 we determine the number of joints required.

$$\text{Total Expansion} = \frac{100^\circ\text{F}}{10} \times \frac{200\text{ ft.}}{100} \times .36 = 7.2"$$

$$\text{Number of joints} = \frac{7.2}{4} = 1.8$$

Note: Always round off to the next highest number. Therefore in this example we see that two expansion joints are necessary.

### Expansion Comparison

### Rule of Thumb for PVC Expansion

### PVC Pipe Length Variation due to Temperature Change (°F) Coefficient = $3.6 \times 10^{-4}$ in./ft./°F

## 2. Determine Piston Opening:

The expansion joint must be installed to allow both expansion and contraction of the conduit run. Because installation temperatures may vary, the piston setting must be determined. The correct piston opening is determined using the following formula:

$$\text{Piston (in.)} = \frac{\text{max. temperature (°F)} - \text{installing temperature (°F)} \times 4}{\text{temperature change (°F)}}$$

### Example:

Using step 2 we determine the proper piston opening.

$$\text{Piston (in.)} = \frac{110 \text{ (°F)} - 60 \text{ (°F)} \times 4''}{100 \text{ (°F)}} = 2''$$

Therefore this piston should be opened 2 inches when the joints are installed.

## Location of Expansion Joints

Proper functioning of an expansion joint depends on three procedures:

1. The correct placement of the expansion joint.
2. The proper installation of rigid PVC conduit and the expansion joint.
3. The proper placement and fastening of support straps.

### One Expansion Joint - Figure 1

If only one expansion joint is needed between two boxes, the barrel of the joint should be rigidly fastened close to the first box. Rigid PVC conduit should then be loosely supported with straps, allowing the conduit to move freely as it expands and contracts.

### Two Expansion Joints - Figure 2

If two expansion joints are needed, the joints should be firmly fastened back to back at the center of the run. Rigid PVC conduit should be loosely supported with straps, allowing the conduit to move freely as it expands and contracts.

### Two Expansion Joints (Alternative) - Figure 3

Alternatively, the center of the run and the two expansion joints (located at the boxes) should be rigidly fastened. All other support straps should be loosely fastened.

### Three or More Expansion Joints - Figure 4

If more than two joints are needed in a very long run, they should be put in a series, one after the other. Each barrel must be rigidly fastened while conduit is loosely supported with straps allowing the conduit to move freely as it expands and contracts. When installed in a series, each section acts independently of the other. Spacing of conduit supports must be in accordance with NEC article 347-8.

Size (in)	Compressed Length (in)	Travel (in)
1/2	8.00	4
3/4	8.00	4
1	8.50	4
1-1/4	9.00	4
1-1/2	9.00	4
2	9.25	4
2-1/2	14.25	8
3	14.25	8
3-1/2	14.90	8
4	14.90	8
5	26.00	8
6	26.00	8

Figure 1

Figure 2

Figure 3

Figure 4

## INSTALLATION OF EXPANSION JOINTS

### Installation recommendations:

- Expansion joints should be mounted so the piston can travel in a straight line in the barrel. If the alignment is not straight, the piston will bind, preventing the joint from working correctly.
- The expansion joint barrel should be clamped tight, but the conduit mounted loose enough in its hangers to allow for movement as it expands and contracts.
- Kraloy nonmetallic straps are correctly sized and designed for proper support, and must be used to secure the conduit.
- When expansion joints are used in a vertical position, the piston should be mounted in a downward position so dirt cannot deposit between the barrel and piston at the muzzle of the expansion joints.

### Common Mistakes

Three common mistakes are:

1. Forgetting to use expansion joints.
2. Not using enough expansion joints.
3. Overtightening of support straps.

It is more cost effective to use more expansion joints than needed, rather than too few. It is difficult to correct the problem after conductors are installed and in service. Failure to accommodate expansion/contraction may result in pipe fracture.

### Installation of the One Piece Expansion Joint (OPEJ)

1. Solvent cement the PVC conduit into the conduit hub of the OPEJ and firmly secure the PVC conduit on the solvent cement side of the OPEJ using Kraloy pipe straps.
2. Set the expansion fitting by marking a line 11/2" from the end of the conduit to be inserted and insert the conduit into the OPEJ to this mark.
3. Secure and support the conduit raceway using Kraloy pipe straps.

## CONDUIT ELBOWS

### 90° Elbows Schedule 40 Standard Radius

Size inches	Part Number	Product Code	A inches	B inches	C inches

# KRALOY PVC ROUND FLOOR BOX

Installation is quick and simple with our nonmetallic floor box and covers, saving both time and money over similar metallic assemblies.

Kraloy's floor box and duplex receptacle covers are constructed from high impact, noncorroding and nonconducting PVC. The flush mount covers are available in custom colors and are shipped with a leveling ring. Metal cover adapter kits are also available, allowing you to adapt to metal floor plates. Our 6" deep floor box allows flexibility for various concrete floor pours, while our 4 3/4" width offers easy access and ample wire room. The box comes complete with 2 - 1" and 2 - 3/4" hub openings.

All boxes are shipped complete with reducer plugs (2 - 1 x 3/4, 3 - 3/4 x 1/2) for added versatility.

## Nonmetallic Floor Box, Cover & Metal Cover Adapter

Description	Part Number	Product Code
Floor Box Base (includes disposable protective cap & reducer plugs) suitable for slab-on-grade or below grade, and wood floor construction	FB	078876
Floor Box Kit c/w Universal leveling ring adapter, disposable protective cap and reducer plugs	FBKIT	078908
Metal Cover Adapter Kit (includes leveling ring, metal cover adapter ring & two shim gaskets for height adjustment)	AFMC	078875
Universal Leveling Ring Adapter	LRA-U	078446
Floor Box Duplex Receptacle Cover (Nonmetallic) c/w leveling ring and blank cover & gasket. Accepts standard duplex receptacle (not included)		
Brown	FBDRCB	078877

Grey	FBDRCGr	078618
Light Almond	FBDRCA	078841
Tri-Service Universal Divider Kit (includes upper & lower dividers, riser tube & four grommets) Kit partitions the round PVC floor box to permit power, communication and/or data cabling in one location and within the same box	FBUDK	078993
Y Connector use y connector to feed through (in/out) or to bring a parallel run of 3/4" conduit to the same hub	FBYC	078928

# KRALOY PVC ROUND FLOOR BOX

## Round Floor Box Stand

This simple yet innovative Round Floor Box Stand is equipped with several height brackets which accommodate the different rebar and post-tension cable heights and slab depths. When installed together, the Floor Box and Stand can be used in 5-1/2" to 10" slab depths.

### Features:

- Four adjustable heights
- Easy to install
- Cost effective
- Raises entrance hubs to rebar height
- Minimizes footprint on concrete form
- Withstands tough job site conditions

The Round Floor Box easily snaps into the Stand on one of the four convenient height brackets at 2-1/2", 3", 3-1/2" and 4". By raising the Floor Box off the concrete form, the footprint is minimized which reduces the amount of time the contractor spends finishing the concrete surface. In addition, the various Stand heights allow the ENT to enter the Box in a flat and straight path, resulting in less effort by the contractor when pulling in the electrical cable.

FBS-KIT	178269

## Brass and Nickel Cover Plates

These cover plates help to protect enclosed power data and communications wiring from daily environmental floor conditions such as mopping (UL scrub water tested) and foot traffic (UL approved for cover loading).

The covers feature a light lacquer finish for extra strength and durability in high traffic areas and include a rubber gasket and aluminum backing plate to create a water-tight seal. The flush mount cover plates should be installed to the floor box using the LRA-U.

## CEMENTS AND PRIMERS

Choosing the correct cement is a vital link in a thermoplastic piping system. Although cement is one of the most critical components of a piping system, it is most often overlooked. Cements are formulated to best meet specific needs –for example, general-purpose cement is thinner and less aggressive in bonding than heavy-duty industrial cement. Use Clear Conduit Solvent Cement Medium Bodied to create solid, waterproof joints when connecting electrical PVC conduit pipe. The cement is approved for use with rigid PVC conduit such as Kraloy's Rigid PVC conduit & fittings, Kwikon ENT and fittings, and Duct & fittings.

# KRALOY JBOX

Introducing the Kraloy® JBox™, the Next Generation Junction Box. The original junction box is completely redesigned and features have been added to make this the easiest box to use. The patent pending integral gasket, non-metallic fasteners, molded mounting feet, embossed grid-lines and flat cover features have been engineered to provide a contractor-friendly junction box.

## SHORT FORM SPECIFICATIONS

Junction boxes shall be acceptable for indoor and outdoor use and manufactured of PVC in a gray color analogous to Rigid PVC conduit and fittings. The junction box and its fasteners, hinges or components shall be entirely non-metallic. Boxes shall be NEMA rated 1, 2, 3R, 4, 4X, 6, 6P, 12, 13 and certified to bi-national standard UL50/50E - CSA No.94.1/94.2 by a Nationally Recognized Testing Laboratory (i.e. UL or CSA).

The cover/box seal shall be dual-molded so as to be a permanent part of the cover and the cover secured to the box using non-metallic quarter-turn "close by hand, tool assist to open" fasteners. To aid in the alignment and proper positioning of conduit connections the box/enclosure shall have embossed gridlines on the sidewalls. The mounting feet shall be a permanent molded feature of the box and not extend beyond the periphery of the box/enclosure. On boxes/enclosures of nominal size 8"x8" and larger, back-panel / DIN rail mounting and pad-lock provisions shall be incorporated into the product.

Acceptable manufacturer: Kraloy JBox Series

## APPLICATIONS

- Corrosive Environments
- Waste-water treatment facilities
- Marine & car washes
- Agricultural
- Wash down

## STANDARDS

NEMA Rated: 1, 2, 3R, 4, 4X, 6\*, 6P\*, 12, 13  
\* Applies only to 4" to 12" non-hinged covers

CSA Listed  
CSA C22.2 No. 40, CSA C22.2 No. 85

UL Listed for wet locations  
UL 50 / CSA C22.2 No. 94.1,  
UL 50E / CSA C22.2 No. 94.2

## ADVANTAGES

### 1 HAND-CLOSE FASTENERS

- Close by hand – tool assist to open
- 100% non-metallic – corrosion resistant material
- No loose hardware for easy installation

### 2 SMOOTH FLAT COVER

- No ribs – offers a flat, smooth surface for mounting of devices or labels
- No engravings

### 3 LOCK-OUT OPTION

- Available on sizes 6" to 16"
- Use a tie-wrap, bolt or padlock for added security

### 4 LEAK-FREE INTEGRATED GASKET

- Injection molded and extruded gaskets permanently fixed to the cover – no installation required
- Proprietary gasket material creates a 6P rated enclosure (4" – 12")
- Neoprene gasket material creates a 4X rated enclosure (14" – 16")

### 5 MOLDED MOUNTING FEET

- Molded – no loose parts to assemble
- Located on corners out of the way of conduit connections
- Flush with the back of the box for close surface mounting
- Integrated design of mounting feet offers improved strength

### 6 BUILT-IN GRIDLINES FOR DRILLING

- Easy reference for drilling knockouts
- Makes conduit alignment a snap
- Indicates a "drill zone"

### 7 POLE MOUNTING KIT

- Installs on round, square & octagonal poles up to 15" diameter
- Works with wood, concrete, steel and composite poles
- Supplied as a complete kit in galvanized or stainless steel

### 8 BACK PANEL

- Designed to fit sizes 6" and 16"
- Made of 14 gauge carbon steel
- White epoxy powder-coated finish
- Easy to cut and drill to mount devices

## KRALOY JBOX WITH HINGED COVER

The Hinged Covers open up to 214° and are removable for complete and easy access to control devices and instrumentation.

The Kraloy JBox Hinged Cover is NEMA 3R and 4X rated, ideally suited for indoor and outdoor industrial, MRO and OEM applications, and in wash-down environments. It is 100% non-metallic and includes all the features that users have come to appreciate in the Kraloy JBox.

Intermediate Vertical-Lok Spacers 43

Base Vertical-Lok Spacers 43

# VERTICAL-LOK SPACERS

Kraloy's interlocking spacers provide uniform separation between the rows and columns of conduits and when assembled with conduit, create a stable structure for the concrete. Spacers connect quickly and easily by sliding together horizontally and snapping together vertically and provide true customization for any configuration of duct bank.

Kraloy conduit interlocking spacers are available in a variety of spacing dimensions for all conduit sizes. Our most popular sizes are offered with unique rebar holder slots for quick reinforcing bar installation and the bases have support holes for securing the base spacers to the trench bottom.

Kraloy conduit spacers manufactured with the rebar holder slots can accommodate a maximum rebar diameter of 5/8" for the 2" conduit size and 7/8" for all other conduit size spacers. All conduit spacers provide a 3" clearance from the trench base to the bottom of the first conduit.

## APPLICATIONS

- Residential (low or high rise)
- Commercial (low or high rise)
- Institutional (Prisons, Schools, Universities)
- Hospitals and Nursing Homes
- Stadiums and Arenas

## ADVANTAGES

### 1 INNOVATIVE DESIGN

The ingenious design adapts to the inherent irregularities and contours of a trench with a wide support surface to ensure even load distribution.

### 2 MAXIMUM FLEXIBILITY

Different sized spacers can be easily grouped to create the required width of duct bank.

### 3 TOUGH AND RESILIENT

Made of resilient, high-density polyethylene, our spacers easily withstand inclement weather and severe conditions normally found on a construction site. Losses caused by breakage are virtually eliminated. Kraloy's spacers are resilient at extremely low temperatures. Tough and flexible, these spacers are immune to corrosion, rust, mildew and humidity.

### 4 MOLDED RE-BAR INNOVATION

These provide better alignment and more uniform distribution of re-bar in a duct bank, making duct bank installation even faster and easier.

### 5 INTEGRAL HOLES

The integral holes offer base spacer fastening and stabilization.

# Conduit **REPAIR** **QUICK & EASY!**

**1**

Two half shell pieces close around the installed wire and cable

**2**

Interlocking joints provide water-tight seal

**3**

Standard PVC solvent cement quickly connects the EPR kit, restoring the conduit to its original form

## **FEATURES & BENEFITS**

- Restores structural integrity of conduit system
- Cost savings with fast and easy installation
- Compatibility with existing installed PVC conduit

# EPR CONDUIT REPAIR KIT

Technical Information 46

Repair Steps 47

# EPR CONDUIT REPAIR KIT

These clever and innovative conduit repair kits from Kraloy are the first total repair systems for broken and damaged PVC conduit. They offer fast and easy repairs for damaged conduit caused by actions such as earth excavation, horizontal and core drilling.

With unique interlocking joints, the EPR Kits' two half shell bell by bell pieces simply close around the installed wire and cable. Using standard PVC solvent cement, EPR Kits are quickly and easily assembled and connected, restoring the conduit to its original form. And, unlike other conduit repair systems, EPR Kits are capable of repairing various lengths and types of pipe quickly and accurately, saving you time and money.

## ADVANTAGES

- 1 RESTORES STRUCTURAL INTEGRITY OF CONDUIT SYSTEM
- 2 COST SAVINGS WITH FAST AND EASY INSTALLATION
- 3 COMPATIBILITY - Inside diameter of bell equals outside diameter of pipe to create a bell and spigot connection
- 4 SPECIAL INTERLOCKING JOINTS
- 5 PROVIDE WATER-TIGHT SEAL
- 6 PACKAGING INCLUDES EASY TO FOLLOW INSTRUCTION SHEET
- 7 IDEAL FOR THE REPAIR OF RIGID PVC CONDUIT IN ELECTRICAL, TELECOMMUNICATION, UTILITY AND CATV APPLICATIONS

## APPLICATIONS

- Utilities
- Cable
- Communications
- Residential
- Airports
- Subways
- Bridges & tunnels
- Water treatment plants
- Sewage treatment plants
- Pulp & paper industries
- Street & highway lighting
- Food processing plants
- Agricultural, dairy, hogs, cattle, chicken, etc.
- Parking garages
- Car washes
- Fish plants
- Mines
- Marinas
- Steel mills

## REPAIRS CONDUIT AS EASY AS 1-2-3

# SAVE Time & Money with Kwikon ENT & Fittings

An ENT system you can count on!

In 1986 we made in-slab electrical raceways faster to install by introducing the industry's first true, integrated ENT system – long lengths of flexible tubing that reduce the number of couplings needed. Kwikon ENT and fittings are designed to work together and provide the most robust concrete-tight ENT system on the market.

- Labor saving design compared to traditional EMT
- Six locking tabs for unbreakable connections
- Strong and flexible ENT tubing
- Boxes are installation ready and concrete-tight
- Form stubbies eliminate the need to drill to the deck

## Kwikon Slab Boxes... Installation Made Easy

- Approved for support of ceiling fans up to 35 lbs and luminaries up to 50 lbs
- Corner mounting tabs to guide nails inside the trim area
- Clear Vue vacuum formed, removable covers allow markings to be seen and prevent slurry or stucco from entering the box
- Ready to Install – no assembly required

# KWIKON NONMETALLIC TUBING & FITTING

Noncorroding and nonconducting Kwikon® Electrical Nonmetallic Tubing (ENT) fittings, slab boxes and accessories are engineered for the rugged day-to-day challenges of the construction industry - whether encased in concrete, concealed in walls or ceilings.

Kwikon ENT's corrugated construction allows it to be bent easily by hand. No special bending equipment is required. And our patented Kwikon couplings and connectors, with their unique 360° locking tabs, provide for snap-on, lock-in installation that exceeds UL requirements for conduit pullout.

Add our innovative form stubbys and Kwikon concrete-tight slab boxes, (available with or without integral 1/2", 3/4" or 1" molded hub connectors) and you've got a total integrated system that saves you time and money on the job. Available in 1/2" to 2-1/2" sizes, Kwikon ENT is FT-4 rated for use in non-combustible construction.

## ADVANTAGES

### 1 CONCRETE-TIGHT

Every contractor's worst nightmare is a product that doesn't work or hold up in poured concrete; the costs of replacement and repair can be tremendous. Kwikon ENT and fittings are concrete-tight, requiring no solvent welding or tape around the connections, or paper stuffed inside.

### 2 PULL RESISTANT

Once a length of Kwikon tubing is connected to a coupling or connector, it stays connected, thanks to our unique six locking tab design. With a pull-out resistance of up to 175 lbs., our patented snap-on, lock-in system provides a seal that easily meets CSA requirements for conduit pullout.

### 3 FIRE RESISTANT

Kwikon ENT tubing, fittings and slab boxes are approved for use in noncombustible 2 hour and 4 hour fire-rated floor/ceiling assemblies.

### 4 IMPACT RESISTANT

Kwikon ENT is made of impact resistant PVC, so it won't break or crack if an object is dropped on it or someone steps on it.

### 5 STRONG FITTINGS

Kwikon's strong, solid fittings meet all UL and CSA requirements.

### 6 FLEXIBLE

Flexible enough to be bent by hand, Kwikon ENT is tough enough to withstand crushing and breaking.

## APPLICATIONS

- Residential (low or high rise)
- Commercial (low or high rise)
- Institutional (Prisons, Schools, Universities)
- Hospitals and Nursing Homes
- Stadiums and Arenas

## STANDARDS

CSA Standards C22.2 No. 227.1,  
C22.2 No. 85 NEMA TC-13  
UL 514B, UL 514C, UL 1653

## STORAGE & HANDLING

- NOT to be installed, stored, or handled in cold temperatures below -20°C (-4°F)
- NOT to be stored outside

## SHORT FORM SPECIFICATIONS

### 1.1 REFERENCES

- A. Standards referred to in this section are:
1. UL 1653 Electrical Nonmetallic Tubing
  2. NEMA TC-13 Electrical Nonmetallic Tubing

## PRODUCTS

### 2.1 MANUFACTURERS

- A. Acceptable manufacturers are listed below
1. Electrical Nonmetallic Tubing: a. Kwikon by Kraloy
  2. Electrical Nonmetallic Tubing Fittings: a. Kwikon by Kraloy
  3. Electrical Nonmetallic Tubing Boxes: a. Kwikon by Kraloy
- B. All ENT tubing, ENT fittings, ENT boxes and accessories shall be manufactured by the same company so as to form a complete ENT system.
- C. ENT systems shall be approved for use in fire resistance rated concrete floor-ceiling assemblies with fire resistance ratings up to 4 hours.

### 2.2 RACEWAYS

- A. ENT raceway shall be color coded to indicate the wiring system. Blue stripe for power, red stripe for fire alarm/emergency systems and yellow stripe for data/communications.
- B. ENT raceway shall be listed to UL 1653 and manufactured in accordance with NEMA TC-13.

### 2.3 FITTINGS

- A. ENT Fittings shall be manufactured of high-impact PVC
- B. ENT Fittings shall meet the following requirements:
1. Six locking tabs located every 60° providing 360° contact.
  2. Locking tabs shall provide a conduit pullout of a minimum 175 ft-lb force.

3. Concrete tight without the need for taping.
4. When transitioning to EMT conduit, the transition fitting shall have six locking tabs for ENT connection and set-screw connection for EMT.

### 2.4 BOXES

- A. ENT boxes shall be manufactured of high-impact PVC
- B. ENT Slab Box and Wall Box requirements:
1. Slab Boxes shall be approved for the purpose and concrete-tight.
  2. Round Slab Boxes shall be approved for use with luminaires up to 50 lbs and ceiling fans up to 35 lbs.
  3. Round Slab Boxes shall have threaded brass inserts for the attachment of luminaires or ceiling fans.
  4. Slab Boxes shall have eight (8) integrally molded ENT hub connectors with six locking tabs for ENT raceway connection.

## INSTALLATION

### 3.1 INSTALLATION

- A. ENT raceways, fittings, boxes and accessories shall be installed in accordance with Article 362 of the 2008 National Electrical Code.
- B. Where ENT penetrates a fire-rated wall, floor or ceiling assembly, an approved firestop system as listed in Underwriters Laboratories Building Materials Directory or other nationally recognized testing laboratory shall be used.
- C. Not permitted for use where subject to ambient temperatures in excess of 122°F (50°C)

## INSTALLING IS THIS EASY

### 1. UNROLL KWIKON TO DESIRED LENGTH

Available in convenient coil and reel lengths up to 1,500 ft., Kwikon gives you the flexibility to measure out exactly the amount of tubing you need. Kwikon requires fewer couplings for long spans than metal conduit. It's recommended ENT be securely fastened at 2 – 3 ft. intervals.

### 2. CUT KWIKON WITH AN ENT CUTTER

For straight cuts every time use the Kwikon scissor-style cutting tool. However, no special tools or cutting equipment are necessary. Kwikon can even be cut with a standard utility knife.

### 3. MAKE BENDS AND TURNS BY HAND

Unlike metal which has to be cut to fit tight spaces, Kwikon can be bent, turned and manipulated by hand to wind around irregular curves and corners. When bending, ensure the radius of the curve is at least six times the diameter of the tubing.

### 4. SIMPLY SNAP CONNECTIONS TOGETHER

With no special tools or equipment needed, Kwikon's unique snap-on fittings quickly and easily join or terminate Kwikon ENT and provide a concrete-tight connection.

### 5. PULL CABLE THROUGH KWIKON

Kwikon's interior corrugated surface significantly reduces the amount of friction when pulling cables through long runs, even in runs with 90° bends. With Kwikon, you can pull longer runs of cable without worrying about damage.

KWIKON FITTINGS

**KWIKON STUB DOWN FITTINGS** are designed for direct connection to ENT on the horizontal. The flanged base offers a NPSC threaded hub connection on the vertical (at the exit point of the slab) allowing for the direct transition to other raceway products or to ENT connection.

Either way, our Kwikon ENT connection creates a stub down of ENT without penetrating the form.

Designed to offer the optimal balance of bend radius and overall height in the slab, these fittings provide a bend radius of 2-1/2" while standing less than 3-3/8" tall.

The **ENT SUPPORT UNIT (ESU)** raises the tubing or conduit up off the concrete form during the concrete pour maintaining a level raceway and allows for maximum aggregate flow and concrete consolidation.

Easy to use, the ESU snaps around any size of ENT. It is perfect for use in high rise buildings constructed with post-tensioned (PT) concrete slabs.

FEATURES

- One size fits all 1/2" - 2"
- Saves time and labor
- Easy locking mechanism
- Securable to the concrete form
- Minimal footprint reduces amount of surface contact

## KWIKON SLAB BOXES

### STANDARD SLAB BOXES

- Approved for support of ceiling fans up to 35 lbs. and luminaires up to 50 lbs.
- Concrete-tight.
- Corner and traditional mounting tabs offer contractors two options when installing to the slab deck
- Angled design guides the nail into position within the trim cover area
- All molded connectors have 360° locking tabs that exceed UL and CSA requirements for pull-out.
- Manufactured from high-impact PVC.
- Nonmetallic/non-conducting/non-corroding.
- Threaded brass inserts. (10/32 for ceiling fans, 8/32 for luminaires).
- Supplied as a fully assembled one piece unit.
- Clear Vue vacuum formed removable covers

Size inches	Part Number	Product Code
----------------	----------------	-----------------

#### Kwikon Standard Slab Boxes

with Molded Connectors – Volume 44 cu in.

8 x 3/4	SVDB-H-15	089065

### Kwikon Shallow Concrete Wall Boxes

2" Shallow Boxes – Volume 38 cu in.

4 x 1/2	SVSB-H-10	089054
4 x 3/4	SVSB-H-15	089053

## SLAB BOX ASSEMBLY FOR USE WITH PLASTER RINGS

- Approved for support of ceiling fans up to 35 lbs. and luminaries up to 50 lbs.
- Slab box assemblies are supplied without the collar - ready to accept the desired raised cover/plaster ring.
- Plaster rings mount directly to the box opening using the screws supplied.
- Used with raised covers, boxes are perfect for use in shear wall or block construction for wall mounted fixtures and devices.
- Clear Vue vacuum formed removable covers

Size inches	Part Number	Product Code

## One Kit, Four Heights, One Low Cost!

This simple yet innovative Round Floor Box Stand is equipped with several height brackets which accommodate the different rebar and post-tension cable heights and slab depths found from job-site to job-site. When installed together, the Floor Box and Stand can be used in 5-1/2" to 10" slab depths.

Sold as a Kit, Kraloy offers the Round Floor Box and Stand

conveniently packaged together as one complete product offering.

## FEATURE & BENEFITS

- Four Adjustable Heights
- Raises Entrance Hubs to Rebar
- Minimizes Footprint on Concrete Form
- Withstands Tough Job Site Conditions
- Easy to Install
- Cost Effective

## FLOOR BOX STAND KIT

Is equipped with several height brackets which accommodate the different rebar and post-tension cable heights and slab depths found from job-site to job-site.

# The SceptaCon Solution

The SceptaCon Joint  
Featuring slide-in spline  
locking system

## ...an essential part of your **SMART** lighting solution

**SceptaCon™** is one of the first PVC systems designed for the rigors of trenchless applications. Made of durable Schedule 40 PVC, SceptaCon links seamlessly to existing PVC conduit infrastructure and allows utilities to standardize on PVC throughout their entire electrical system.

Now available in a 2" diameter, SceptaCon is ideally suited for street lighting and traffic signal applications where installation requires a smaller diameter pipe than your typical electrical raceway. As the only approved, boreable PVC electrical raceway available in a 2" size, SceptaCon allows contractors to install RW cables instead of the more expensive TECK cables.

### **No Fusion or Cementing Required**

With SceptaCon's slide-in locking system, a watertight joint can be made in seconds, without fusion or cementing

### **Pressure Rating & Flexibility**

SceptaCon is pressure rated to 80 psi and approved for a 65 ft bend radius

### **Easier to Handle & No Reel to Return**

Installed one length at a time, SceptaCon doesn't require the use of a reel...no reel deposit, no reel truck, and no need to return the reel after use

# SceptaCon

Technical Information 60

Performance Specifications 62

Joint Assembly 63

# SCEPTACON TRENCHLESS RACEWAY

SceptaCon™ is one of the first PVC systems designed for the rigors of trenchless applications. It links seamlessly to existing PVC conduit infrastructure and allows utilities to standardize on PVC throughout their entire electrical system.

Made from durable Schedule 40 PVC, SceptaCon is a proven mechanical, spline-locking system designed specifically for horizontal direction drilling. Approved for a 65 ft bend radius – the same as most drilling rods – SceptaCon can effectively bend around obstacles such as rocks and other utilities.

SceptaCon is available in sizes 2" – 6" in both 10 ft and 20 ft lengths making SceptaCon easy to transport and handle on the jobsite compared to large HDPE reels and coils.

## APPLICATIONS

- Environmentally Sensitive Areas
- Historical Landmarks
- Road and Highway Crossings
- Urban Areas

## STANDARDS

UL 651

## ADVANTAGES

### 1 NO CEMENTING OR LUBRICATION REQUIRED

SceptaCon's slide-in locking system and pre-installed, pre-lubricated gaskets allow contractors to create a water-tight seal by hand in seconds – in all temperatures without having to worry about solvents or chemicals freezing or drying too quickly.

### 2 NO FUSION REQUIRED

Because SceptaCon joints can be quickly joined by hand in seconds, crews don't need large, expensive fusion equipment or special training to create water-tight joints.

In addition, SceptaCon can be assembled one pipe length at a time, then pulled underground, eliminating the need for long strings of pipe on the job. In this way, SceptaCon is ideal for short haul applications in cramped urban areas.

### 3 SUPERIOR PERFORMANCE

SceptaCon is made from durable schedule 40 PVC that's resistant to creasing, scoring or flattening when pulled past obstructions in the borehole, yet flexible enough to bend with underground twists and turns. SceptaCon remains round, unlike HDPE which can stretch and become oval. And with PVC's proven 70-year history in underground piping, it's no surprise telecommunication contractors are turning to SceptaCon PVC raceway for reliable performance – now and over the long term.

### 4 EASIER TO HANDLE

SceptaCon saves crews all the hassles of working with HDPE. As any crew knows, cumbersome HDPE reels are heavy and awkward to transport and work with, and the material is notoriously rigid in cold temperatures. On the other hand, SceptaCon is available in convenient 10' and 20' lengths that are lightweight, easy to handle and no problem to work with in all types of weather.

## SHORT FORM SPECIFICATIONS

### GENERAL

Installation of conduit in defined areas (such as environmentally sensitive areas, existing roadways and high traffic pedestrian areas) shall be accomplished using trenchless horizontal directional drilling methods.

### PRODUCT

The trenchless raceway system shall be manufactured of schedule 40 PVC and to PVC conduit specifications providing for a seamless transition to rigid nonmetallic conduit, duct or other approved conduit systems. Each length of conduit shall be supplied with end caps, a locking spline, a factory installed pre-lubricated o-ring seal and a positive stop alignment ring. Each length shall incorporate dimensionally precise machined grooves (internal on the bell and external on the spigot) whereby the connection of the raceway lengths creates a cavity for the locking spline. The bell end of each length shall have a label affixed by the manufacturer that provides installation instructions while clearly identifying and protecting the spline insertion opening.

Acceptable manufacturers are: SceptaCon Trenchless Raceway by Kraloy.

### APPROVALS

The Trenchless Raceway System shall be third party certified to UL651 and CSA C22.2 No.211.2.

## PERFORMANCE SPECIFICATIONS

SceptaCon is made for fast installation, creating a water-tight seal in seconds with no special fusion equipment or training needed. SceptaCon is manufactured to UL651 and CSA C22.2 no. 211.2 standards and meets all testing requirements of Rigid PVC Conduit (PVC).

- SceptaCon's rated bend radius is sixty five (65) feet
- Rated Pulling Force

2" – 3,000 lbs      4" – 8,700 lbs  
3" – 7,000 lbs      5" – 11,300 lbs      6" – 14,000 lbs

- SceptaCon's water tightness using the joint immersion test
  - 80psi pressure without a bending force applied
  - 80psi pressure when subjected to a 65 foot bend radius

The SceptaCon joint features internal stopping features that gradually stop the spigot during insertion to avoid bottoming out within the bell, which avoids the possibility of over insertion.

## PRODUCT SELECTION CHART

Nominal Diameter in	Product Code	O.D. in	I.D. in	Min. Wall in
10' Lengths				
4	106440	4.500	4.026	0.237
5	106450	5.563	5.047	0.258
6	106460	6.625	6.065	0.280
20' Lengths				
2	106421	2.375	2.067	0.154
3	106431	3.500	3.068	0.216
4	106441	4.500	4.026	0.237
5	106451	5.563	5.047	0.258
6	106461	6.625	6.065	0.280

## FAST AND EASY JOINT ASSEMBLY

### THE SCEPTACON JOINT

Featuring slide-in spline locking system.

SceptaCon needs no special equipment or training joining quickly to create a water-tight seal in seconds.

#### Step 1

Remove the red protective plugs and locking spline. Slide the spigot and bell ends past the pre-lubricated gasket to the positive stop alignment ring.

#### Step 2

Using the insertion hole, completely push the locking spline into the pipe's inner groove to lock lengths together.

#### Step 3

You're done! Our spline locking system ensures they'll stay together during pull-through and over their life underground.

# Sceptalight LED

Introducing the Sceptalight LED light fixture and adapter kit. Sceptalight LEDs offer significant energy savings and can last beyond 50,000 hours without a single need for maintenance. Certified and tested for use in indoor, outdoor, wet locations, wash down and corrosive environments, Sceptalight LEDs are certified to the latest LED light fixture standards and NEMA 4X approved.

## RETROFIT OPTION

Sceptalight LEDs can easily retrofit onto existing installations for increased energy savings.

## CORROSION RESISTANT

Heat sink is coated with a durable e-coat layer that prevents corrosion.

## NEMA 4X AND IP66 RATED

Approved for wet locations, wash down and corrosive environments.

## HEAT DISSIPATION

Specially designed heat sink ensures long life and optimum performance for over 50,000 hours.

## ENERGY EFFICIENT

1,575 lumens of light output is produced with only 15 Watts of electricity.

## DIMMABLE

Lights are dimmable down to 5% for maximum control of the lighting environment.

## POLYCARBONATE GLOBE

Impact and weather resistant for tough environments.

# SCEPTALIGHT NONMETALLIC LIGHT FIXTURE

Whether you're looking for economical outdoor lighting solutions or corrosion-resistant fixtures for punishing industrial environments, Sceptalight fixtures from Kraloy prove themselves to be all-round performers in a variety of indoor and outdoor applications.

Sceptalight fixtures are made from a glass-reinforced thermoplastic polyester resin, which offers outstanding corrosion and chemical resistance. And its interior and exterior silicone gaskets create a watertight seal, the reason it performs equally well indoors and outside. This thermoplastic design marries an unrivaled balance of strength, stiffness and toughness with all the benefits users appreciate of Scepter Rigid PVC Conduit and Kraloy Fittings – long life, easy servicing and high impact-resistance.

## APPLICATIONS

- Chemical Plant
- Food Processing
- Highway Tunnel
- Mine Tunnels
- Walk-in Freezers
- Industrial/Commercial
- Marine
- Agricultural
- Waste Water
- Greenhouses

## STANDARDS

## ADVANTAGES

- 1 AVAILABLE** in LED, compact fluorescent & incandescent to suit a variety of applications
- 2 STABLE CONSTRUCTION**  
Reinforced support feet offer secure mounting.
- 3 ADAPTABLE**  
Threaded conduit hubs permit connection to nonmetallic and metallic raceways.
- 4 WATERTIGHT SEAL**  
Temperature and weather-resistant silicone gaskets protect fixture from moisture penetration.
- 5 LONG LIFE**  
Sceptalight nonmetallic fixtures provide long life and easy servicing—unlike metal fixtures and guards that can corrode and seize together.
- 6 INDOOR/OUTDOOR USE**  
UV-resistant material makes Sceptalight fixtures suitable for both indoor and outdoor use.
- 7 CORROSION RESISTANT**  
Thermoplastic construction resists attack from acids, alcohols, alkalis, organic solvents, detergents/ cleaners, greases and oils as well as many other types of chemicals.  
  
Withstands exposure to direct sunlight, heat, salt water and extreme weather.
- 8 DURABLE, IMPACT RESISTANT**  
High-impact nonmetallic guard resists physical impact, chemical attack and heat-induced deformation.

## SHORT FORM SPECIFICATIONS

Light fixtures shall be nonmetallic and constructed of 30% glass filled polyester material exhibiting a maximum linear expansion of 1.4x105 in./in./°F. Fixtures shall be assembled with high temperature silicone gaskets, brass inserts and screws.

Incandescent light fixtures shall be rated for use with a Maximum 150 Watt incandescent lamp. Compact fluorescent light fixtures shall be of the wattage specified and be supplied complete with lamp and ballast (high power factor, low harmonic electronic for 18 & 26 Watt fixtures and magnetic for 7, 9 & 13 Watt fixtures).

Light fixtures shall be third-party certified to CSA C22.2 No. 9 and C22.2 No. 250 for indoor/outdoor wet location use and where the specified installation requires; Class I Div 2 and Class II Div 2 hazardous location use.

LED light fixtures shall be third-party certified to CSA 22.2 250.0 and UL 1598C. LED light fixtures will also be NEMA 4X and IP66 rated for wash-down and corrosive environments. LED light fixtures for hazardous use locations shall be third-party certified to UL 844 for Class I Div 2 and Class II Div 2 hazardous location use.

LED Retrofit Light Engines shall be certified to CSA 22.2 no 250.1 and UL 1598C.

Approved products: Sceptalight LVPE/LVPF/LVPL/LBPE/LPMF/LPPL series light fixtures manufactured by Kraloy.

### WET LOCATIONS

C22.2 No. 250  
CSA Listed to UL 1598  
Minimum 60°C supply conductors

CSA certified for wet locations, Sceptalight fixtures are built to withstand any environment where liquids drip, splash or flow against electrical equipment. And our polycarbonate globes are an excellent alternative to glass in punishing environments where high impact resistance is important. Sceptalight fixtures can operate in extreme temperatures and are resistant to damaging ultraviolet rays. For years, our fixtures have been proven performers on docks, wharfs, decks, walkways, shipyards and a variety of other applications where exposed to the elements.

Incandescent	✓
Compact Fluorescent	✓

### MARINE LOCATIONS

CSA C22.2 No. 250  
UL 1598, UL 1598A  
Minimum 100°C supply conductors

Sceptalight offers fixtures that meet marine location certification, UL 1598A, a supplemental approval to the wet location standard. Marine approved luminaires are rated to be used in salt water environments including conditions such as salt spray corrosion, ignition protection, UV exposure and water ingress making them the ideal choice for shipping vessels and outside marine applications. Sceptalight marine rated fixtures come with a standard clear glass globe and require a 100W incandescent bulb.

### HAZARDOUS LOCATIONS

CSA Listed to UL 844  
CLASS I, DIV 2 Groups A, B, C & D  
CLASS II, DIV 2 Groups F & G  
Minimum 90°C supply conductors

Sceptalight offers fixtures that are CSA certified for hazardous locations, making them the ideal choice for specific harsh industrial environments involving flammable or explosive gases, vapors or dusts. In addition to their sturdy construction, all our fixtures rated for hazardous locations include a heat-treated globe designed to endure drastic temperature changes such as direct spray of cool water on a hot fixture. Sceptalight fixtures are equipped with brass screws and inserts to ensure performance in punishing industrial conditions.

# SCEPTALIGHT LED

Introducing three Sceptalight LED products: the LED Retrofit Light Engine, the Heavy-Duty LED Light Fixture and the Utility LED Light Fixture. Sceptalight LEDs offer significant energy savings, up to 85% compared to incandescent, and up to 34% compared to fluorescents. Moreover, Sceptalight LEDs can last beyond 50,000 hours without a single need for maintenance.

Constructed of very strong and durable materials, the polycarbonate globe is impact resistant and is resistant to UV light degradation. The specially designed aluminum heat sink dissipates the heat generated by the LEDs to the exterior environment ensuring long-life and optimal performance in both hot and cold environments. Sceptalight LEDs have been tested and certified for use in indoor, outdoor, wet location, wash down and corrosive and hazardous\* environments. They are certified to the latest LED light fixture standards and NEMA 4X approved.

# SCEPTALIGHT COMPACT FLUORESCENT

Sceptalight Compact Fluorescent fixtures combine the outstanding corrosion and chemical resistance of their thermoplastic design with the energy-saving advantages of compact fluorescents. Working four to five times more efficiently per watt than incandescents, Sceptalight compact fluorescents provide 10-20 times the lamp life. Without sacrificing light levels, they use 75% less energy than incandescents for a lower total energy and maintenance cost. They are available in twin tube and quad tube configurations and include ballast.

## Twin Tubes

- Available in 7, 9 & 13 Watt
- Standard Magnetic Ballast

## Quad Tubes

- Available in 18 & 26 Watt
- Electronic Ballast provides "Instant Start" at temps as low as -25°C
- Offers 10,000 hours of lamp life

## PHOTOMETRIC DATA

**26W Quad  
Compact

**ADAPTABLE**  
Threaded conduit hubs permit connection to nonmetallic and metallic raceways.

**WATERTIGHT SEAL**  
Temperature and weather-resistant gaskets protect fixture from moisture penetration.

**LONG LIFE**  
Sceptalight nonmetallic fixtures provide long life and easy servicing—unlike metal fixtures and guards that can corrode and seize together.

**INDOOR/OUTDOOR USE**  
UV-resistant material makes Sceptalight fixtures suitable for both indoor and outdoor use.

**CORROSION RESISTANT**  
Thermoplastic construction resists attack from acids, alcohols, alkalis, organic solvents, detergents/cleaners, greases and oils as well as many other types of chemicals. Withstands exposure to direct sunlight, heat, and extreme weather.

**DURABLE, IMPACT RESISTANCE**  
High-impact nonmetallic guard resists physical impact, chemical attack and heat-induced deformation.

# SCEPTALIGHT INCANDESCENT

Sceptalight incandescent fixtures make the most practical choice to meet the daily needs of commercial, industrial, marine and agricultural applications. Our incandescents will take up to a 150 watt incandescent bulb and are ideal for short burn times as well as flashing and dimming applications.

For light to medium duty applications that do not require the same level of ruggedness, Sceptalight has a low-cost ceiling-mounted Utility Light Fixture available in standard, clear polycarbonate and colored heat-resistant globes.

## PHOTOMETRIC DATA

# Kwikflex

Technical Information 80

NMLT Conduit 81

NMLT Fittings 81

# KWIKFLEX LIQUIDTIGHT FLEXIBLE N

Available in sizes from 3/8" to 2", Kwikflex reels offer the end user the best possible continuous length in the market place. Its patented design offers a low profile coupling that when two conduits are connected it is hardly noticeable and allows the user to run the conduit at any length desirable. There is no longer any need for additional parts when making a long conduit run.

Kwikflex NMLT is also available in extra-flexible formulations in sizes 3/8" to 2"

Kwikflex fittings are available in a full range of matching sizes in straight, 90 degree and in a multi-angle configuration. The Multi-Angle Conduit Connector features a unique swivel design which allows for:

- Multiple angle installations
- 45 degree installations
- The ultimate in flexibility for your job

## ADVANTAGES

- 1 QUICK INSTALLATION
- 2 LOWER INSTALLED COST
- 3 SMOOTH INTERIOR SURFACE
- 4 GRADUAL SWEEP
- 5 NO SHARP EDGES
- 6 QUICKER AND EASIER WIRE PULLING AND PUSHING
- 7 WON'T RUST OR CORRODE
- 8 ALL FITTINGS ARE UL LISTED AND CSA CERTIFIED
- 9 POSITIVE GRIP
- 10 LIQUIDTIGHT AND OILTIGHT
- 11 SUITABLE FOR WET AND DAMP LOCATIONS
- 12 PROVIDES A LIQUIDTIGHT SEAL AT KNOCKOUT HOLE, COMES WITH LOCKNUT AND SEALING O-RING

## APPLICATIONS

- HVAC Equipment
- Machine Tools
- Marine Equipment
- Pumps
- Motors & Controls
- Outdoor Lighting
- Printing Equipment
- Refrigeration Equipment
- Transformer Connections

# INEXO<sup>®</sup>

THE ICF BOX

Insertion depth  
of 2-1/4"

'TEETH' can be  
easily removed  
and replaced.

'TEETH' lock in  
place providing a  
rigid hold in the  
EPS foam.

Greater installation  
versatility with 3 screw hole  
choices and flanges on  
both sides.

Full flange  
prevents box  
from twisting and  
sinking into foam  
if over-tightened.

INEXO provides a  
1/2" drywall setback  
resulting in a  
professional  
finish.

Single gang box  
provides 19 cubic inch  
capacity.

# INEXO ICF BOXES

Until now there have been few choices when attempting to provide a truly professional electrical box solution for Insulated Concrete Form homes. Traditional electrical boxes are tedious to install and often require a fair amount of ingenuity and additional labour to provide a less than ideal finished product. Other boxes offered to ICF builders require installation before the concrete pour, throwing off your project time-line.

INEXO's patented<sup>1</sup> design provides a truly professional solution that works with your production schedule and provides the quality installation and finished look that builders require and owners appreciate. INEXO boxes link seamlessly with existing ICF materials, tools and methods. A complete offering designed for ICF walls allow builders to standardize on the use of electrical boxes throughout the building.

<sup>1</sup> Patent No. 6,932,628 & Patent Pending

## APPLICATIONS

- Insulated Concrete Form Buildings
- Schools
- Churches
- Hotels

## STANDARDS

## ADVANTAGES

### 1 INSTALLATION

Installation after concrete pour allows you to follow traditional production schedules

### 2 POSITIONING

Boxes can be installed anywhere on the ICF wall allowing for more variety in box positioning as installers are no longer required to affix to the ICF ties or drill and secure to the concrete wall.

### 3 AVAILABILITY

Residential boxes are available in single, double and triple

### 4 CERTIFICATION

Boxes are fully CSA certified to UL standards for use in ICF and can resist pull forces exceeding 100 lbs – (twice the standard requirement).

## FAST AND EASY INSTALLATION

Installing INEXO boxes requires no special training making the transition to a new solution seamless.

### STEP 1:

Select the position for your box. Using a hot-knife or cutting tool, cut the opening in the EPS foam.

### STEP 2:

Insert the INEXO box into your opening and push the 'teeth' into place until you hear the 'click' – so you know your box is secure. If you are positioned next to a tie, you can utilize two of the 'teeth' on the non-tie side and use the flange holes on the opposite side to screw into the plastic tie.

### STEP 3:

Pull through your NMD cable and continue.

Single gang box provides 19 cubic inch capacity

INEXO provides a 1/2" drywall setback resulting in a professional finish.

With an insertion depth of 2-1/4" and a smooth back, the INEXO box is designed specifically for ICF.

RESIDENTIAL BOX DESIGNED FOR NMD CABLE (14/2 - 10/3).

Greater installation versatility with 3 screw hole choices and flanges on both sides.

Laser level guides for the most precise box placement

'TEETH' can be easily removed and replaced and provide an audible 'click' when fully engaged and secured to the EPS foam.

'TEETH' lock in place for a rigid hold that won't loosen.

Full flange prevents box from twisting and sinking into foam if over-tightened. This innovation allows installers to provide a professional straight finish with no lop-sided boxes.

COMMERCIAL BOX DESIGNED FOR ARMORED CABLE (AC) OR NMD CABLE.

INEXO BOXES

Description	Part Number	Product Code
-------------	-------------	--------------

**Residential (NMD Cable 14/2 – 10/3)**

Single Gang	ICF-1-RL	220000
Double Gang	ICF-2-RL	220001
Triple Gang	ICF-3-RL	220002

**Commercial (AC or NMD Cable)**

Single Gang	ICF-1-CLU	220009
Double Gang	ICF-2-CLU	220010
Triple Gang	ICF-3-CLU	220011

Description	Part Number	Product Code
-------------	-------------	--------------

**Low Voltage Divider**

Divider	LVD-RL	220100
For residential box only		

The INEXO ICF box divider provides contractors with a quick and convenient way to separate different voltage sources in the same box.

RESIDENTIAL BOX WITH LOW VOLTAGE DIVIDER
