

Cash Acme[™] VB-222 Vacuum Breaker

The VB-222 vacuum breaker valve is designed to prevent dangerous back-siphonage and backflow into a potable water supply system. It automatically self-drains when all attachments are removed completely from the valve's outlet which protects the valve and faucet from freezing and rupturing in cold weather.

Approved Applications

For use around homes, schools, commercial buildings, laboratories or any application involving a removable hose attached to threaded faucets.
